Egyptian Futures.—Sakel Contract.—In spite of rather more trade support and a growing tendency to cover short commitments at the present levels, prices in this market have shown a gradually declining tendency throughout the week. Some fairly heavy buying has taken place round 12.50d. for the January position and this, coupled with a healthier demand for actual, has given the impression that we are about to encounter increasing resistance. Whilst it is true that we are only just beginning to feel the real weight of the crop movement, the idea is steadily gaining ground that at 25 dollars in Alexandria and 12.50d. to 13.00d. locally, values, if they have not actually grounded, have reached a level that discounts possibilities on the short side. Comparatively speaking, the Sakel crop cannot be termed large, and the financing of this season's yield at the current basis should not prove difficult when the strong financial resources of Egypt are considered. We rather favour the idea that the larger growers will market their cotton very gradually, or probably withhold it altogether should prices decline further.

Manchester reports indicate more activity, but dearness and scarcity of coal are holding up business that would otherwise be placed. With cheap and plentiful supplies of the raw material, spinners are inclined to take an optimistic view of the outlook, but one always hears the proviso added "when the coal strike is ended." As anticipated in our last report, the American/Egyptian straddle has closed in, to-day's difference being 584 points; a further reduction is probable, but we hardly anticipate that the markets will close in to the extent expected in some quarters. Faced with the bulk, if not all, the new crop hedging on account of their premium,

JOHNSTON LINE

And FURNESS, WITHY & CO., Ltd., Royal Liver Building, Liverpool

Digitized by Google

the Alexandria market has encountered severe pressure throughout the week, with the result that local straddlers have been able to get out of what appeared at one time very unprofitable operations without loss; the markets are now running about level.

Upper Contract.—A fair business has taken place in this option throughout the week, importing and straddle operations being offset by trade purchases. The tone has been fairly steady and our premium over the American contract has hardened somewhat. The Continent and Russia are reported to have purchased some good lines of shipment cotton during the last few days. We consider the present level moderately attractive, and would advise purchases should prices ease further. To-night's close shows losses of 15 to 45 points for near months, whilst the distant options are without change.

Egyptian Spot.—"Bearish" influences have again been uppermost and a further reduction in prices has taken place. Confidence in current rates has been further shaken by the American Bureau report issued last Monday, but probably the bulk of local option is now inclined towards the belief that if the bottom has not yet been reached, it is at all events not far away. To-day, for example, a very healthy inquiry has been in evidence, and the fact that sales reported were not more than 300 bales is accounted for by the very indifferent selection now available here. A few lots of new crop cotton are on offer, here and there, and prices show a considerable amount of irregularity, with the result that rumours of "cheap" purchases have been frequent.

Sakellaridis cotton has been in fair request, all grades coming in for a share of attention at one time or another. Uppers at from 10¼d. to 10½d. have again been in favour, and an improved inquiry for the better grades has been met with. Pilion and Brown have been in only moderate request at from 11.00d. to 12.00d., and White cotton has been neglected. In Sudan cotton, without approaching the substantial figures recorded during last week, a very fair business has continued, both in the White variety, at from 75 to 150 on American, and in the Sakel Seed at from 125 to 350 on November (Sakel) contracts.

In forward cotton, the general inquiry from the trade has left much to be desired, but it is reported on the market that one or two useful lines of cotton have been placed during the week with certain special outlets. Forwardings to spinners for the week ending 22nd instant were returned as 3,831 bales Egyptians and 2,697 bales Sudan. Estimated sales 1,300 bales Egyptians and 2,900 Sudan. Quotations of Sakel have been reduced 45 to 90 points, Extra Fine exceptionally remaining unchanged. Upper and Brown have been reduced 35 points. F.G.F. Sakel to-day 14.25d. F.G.F. Upper to-day 10.60d.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

France and Yugoslavia.

It is inevitable that the simultaneous arrival in Paris of a number of prominent Yugoslavs, representative not only of the Government in power, but also of the Opposition parties, and including the Chief of the General Staff, should have given rise to reports that a fresh effort has been made by the French Government to bring Yugoslavia within the chain of Continental alliances with which it hopes to make France's position in Europe secure even outside the League of Nations. Both countries, unfortunately, are exercised at the present moment over Italy's activities. They consider that conditions in Italy are too volcanic for the comfort of any of her neighbours and impose upon them precautionary measures, in case the forces with which Signor Mussolini is dealing prove too strong for him. Suspicion begets suspicion, and if all the nations are going to act as if the League of Nations were non-existent, there is nothing to prevent Europe from drifting back into the group of armed camps that it was before 1914. The Italians are, no doubt, as convinced of the inherent hostility of France's attitude towards them as the French are suspicious of Italian restlessness. There is no need, however, for any other country in Europe to assume responsibility for the jumpiness of these two peoples, and it is particularly to be regretted if the Balkan Peninsula, just at the moment when there is some chance of its ridding itself of its reputation for family quarrels, allows itself to be drawn into the Franco-Italian vortex. Left to themselves, France and Italy may continue to be unneighbourly and to growl at one another; they will proceed to worse measures only if one or other thinks that it has been successful in immobilising the League of Nations.

British Acquiescence.

The present occasion appears to be one on which British diplomacy might with advantage be much more active than it cares as a rule to be. Of the general pacific rôle that it plays in Europe there can be no question, and its efforts, without doubt, are even now being exercised to keep the peace and promote a better understanding between the two Great Powers so closely allied to Great Britain. France and Italy, however, have seen to it that no narrow ring fence shall be drawn round them, and if the British Government's rôle is to achieve any definite success, it must take into account the smaller States that are being brought by the two restless Powers into their respective orbits. Nearly twenty years ago the mistake was made of believing that we could persuade the Persians of our friendship for them while we allied ourselves with Russia who was bent upon impairing the integrity of their country. To-day Anglo-Italian friendship is going to tar Great Britain with the Italian brush unless the British Government is at pains to convince the smaller States who are nervous about Italy that there is no intention on its part to acquiesce in any form of aggression in any quarter. There is some reason to suppose that it is just this absence of definite assurances and the studied aloofness of Great Britain in regard to Balkan affairs which is responsible for the present anxiety of the Balkan States. They cannot share Great Britain's sense of superiority to the restlessness of France and Italy, and feel obliged, as they are unable to obtain any support or even practical recognition from the British Government, to safeguard themselves, as they imagine, in one direc-

Digitized by Google

tion or the other. Thus it comes about that the Balkan States are in danger of being grouped in two potentially hostile camps, instead of concerning themselves only with their own federation, which will not only make them powerful enough to cry halt, if necessary, to Italy in her wildest mood, but will also prevent anything happening in Italy to disturb their peace of mind. To recognize the fears entertained of Italian policy does not imply acceptance of the justice of those fears. Nerves are still on edge on the Continent, and the strongly developed sense of nationalism obliges every Government to be very zealous in a "Safety First" policy. Accordingly, it is as easy for a nation to convince itself of the complete innocuousness of its own attitude as to believe the worst of all its neighbours. In such a state of affairs only an active policy on the part of the British Government is likely to inspire the smaller States with the conviction that their safety is assured within the League of Nations.

The Greek Elections.

The earliest returns for the Greek elections held last Sunday point to a Republican victory; but whether any single party will be returned in sufficient strength to form a Government by itself with any chance of stability is at the moment of writing not established. One fear has been successfully eliminated, that the actual electoral contest might lead to a serious clash between the opposing parties. If the Republican victory is confirmed, the Royalists will be the more inclined to make a virtue of necessity, by accepting, as the followers of General Metaxas have accepted, the Republic until further notice. In spite of the existence of two main Royalist parties, those of M. Tsaldaris and General Metaxas, they are probably in closer agreement on fundamentals than the Liberal Union. Consequently, they can afford, if so minded, to wait while the effects of office on the Republican units are making themselves felt. If the subordination of personal interests to the common good of the country was difficult before the Election, it will be quite out of the question now that party passions have been aroused by electioneering licence. The struggle between the two camps will, therefore, continue. Whether a Republican victory actually represents the innermost feelings of the electorate as a whole there is no means of knowing. Even General Kondylis allowed his Republican anxiety to override his declarations of impartiality to the extent of uttering a warning that he could not be made responsible for anything that the Army might do in the event of a Monarchist victory. By the majority of the electorate, no doubt, this guarded statement will have been held to confirm the rumours that the Army, or rather the Military Club, was pledged to cancel by force a Monarchist victory at the poll. In these circumstances it would be unlikely that the real views of the country should find full expression in the election.

Iraq Politics.

While the British High Commissioner for Iraq is satisfying the Permanent Mandates Commission at Geneva that the large measure of independence reflected in the present system of government in the Mandated territory is not illusory, Iraq itself is passing through a Ministerial crisis that suggests that the political freedom of the country suffers nothing from outside prompting. There are three main parties in the Chamber of more or less equal strength, and, the Government having failed to retain the support of a majority of the Chamber owing to personal disagreements, no leader is at present able to form a Cabinet with any prospect of stability. In these circumstances King Faisal has adopted the heroic course of summoning Jaafar Pasha el Askari, Iraq representative in London, to return post haste to Baghdad, in order to take over the reins of government. It is evidently King Faisal's hope that Jaafar Pasha's detachment from party politics will enable him, as it did once before, to keep the peace among the warring sections long enough to allow the Chamber to pass essential legislation. Not the least of Iraq's immediate problems is the question of compulsory service, by which means alone those in a responsible position consider that Iraq can honour her obligations to Great Britain, and it will be one of Jaafar Pasha's tasks to persuade the country that compulsory service, which in practice will entail none of the drawbacks that interested politicians depict for it, represents a debt of honour. Certainly, if the British Government had been consulted in the matter, it would have preferred a solution of the Ministerial crisis that did not remove Iraq's able representative from London. Jaafar Pasha's own inclinations must also be opposed to the solution, and his unhesitating response to the call of his country has been made at the cost of heavy personal sacrifice.

Revisionism in Palestine.

The visit of the Zionist-Revisionist leader, Mr. Vladimir Jabotinsky, to Palestine appears considerably to have heartened the economically depressed immigrants. According to report, they have received his eloquent utterances with significant enthusiasm. It may be worth while, therefore, in spite of the fact that he represents a minority among the Zionists, to inquire exactly how he differs from such "moderates" as Dr. Weizmann, and whether it is merely owing to temporary financial embarrassment or to the fact that he expresses something fundamental in the Jewish soul that his tour has been attended with such tremendous if superficial success. In a remarkable speech given in Jerusalem on October 19, Mr. Jabotinsky is reported to have said: "The essence of the Diaspora is the fact that we Jews are everywhere a minority. Should we be condemned to remain a minority for ever in Palestine too, this country would be just another piece of the Diaspora, and I say that it would not be worth our while to trouble the Mandatory Power nor to risk aggrieving our Semitic neighbours just for the luxury of creating, above the seventy-seven Paradises of Diaspora we already possess in every country in the world, a Paradise No. 78, under the ægis of Ishmael." Then followed some highly significant words: "The Jewish people is out to create in Palestine a country where the Jews will no longer be in a minority. This is not the view of extremists. This is the view of every Zionist without any exception, even of those who deny it." And the rest of this speech contained suggestions for larger immigration and for the colonising of the Holy Land.

Jews and Arabs.

Now we have no authority for suggesting that Mr. Jabotinsky is entitled to speak on behalf of every Zionist's

IRAQ AND THE MANDATES COMMISSION.

A certain piquancy attaches to the session of the Permanent Mandates Commission that is being held at Geneva this week owing to the fact that at the seventh ordinary session of the Assembly last September, when the Council was passing in review the work of the Commission, the British representative and the representatives of the other Mandatory States uttered a warning against "a certain tendency on the part of the Commission to extend its authority to a point where government would no longer be vested in the Mandatory Power, but in the Commission." It was to be expected that the latter would not allow this challenge to its authority to pass unnoticed. Accordingly, on the opening day of the session several members sought to define the relations between the Commission and the Council: but, as opinion was not unanimous regarding the relative importance of the political and of the legal aspect of the case, the matter was allowed to drop. From the proceedings of the current session, however, it will be possible to learn whether the Commission, after insisting upon its independence, will be influenced by the warning, or will seek to emphasise its point of view by the manner of its examination of the reports submitted to it. Sir Austen Chamberlain's remarks last September had reference to the Commission's attitude towards "B" and "C" Mandates, and did not, therefore, strictly concern Iraq, Palestine and Syria; but it was realised that, if the tendency were allowed to develop unchallenged, it would be only a matter of time before the same methods of control were applied to the "A" Mandates. The points at issue were the questionnaire that the Commission had submitted for the drafting of annual reports and its attitude towards the hearing of petitioners. With regard to the former it was held by the representatives of the Mandatory Powers that so detailed and extensive a list of questions not only imposed an unnecessary burden on the Mandatary in compiling the requisite report every year, but also simplified the task of critics whose chief object was merely to render more difficult for the Mandatary the accomplishment of its duty. On the subject of petitions the Commission is anxious to exercise the right of hearing petitioners when it so wishes, whereas the attitude of the Mandataries is that, while the right of petition in a Mandated territory should be entirely free, a petition to the Commission should be presented only through the Government concerned. The difference of opinion between the Commission and the Mandatory Powers is an inevitable development of the principle involved. The League imposes a trusteeship on a certain Power and the Commission charged with the task of seeing that the trusteeship is well and faithfully discharged not unnaturally is anxious not to be deceived by stereotyped official assurances that all is well. On the other hand, there cannot be successful administration with divided authority. The Commission must find means of exercising its supervisory control and keeping the Mandatary up to the mark without encouraging every malcontent to intrigue behind the back of the Government.

Interest also attaches to the current session of the Mandates Commission on account of the appearance for the first time before it of the High Commissioner of Iraq. On previous occasions the Commission decided that in view of the indeterminate position in Iraq owing to the dispute with Turkey, it was more practical to postpone a public examination of a representative of Iraq until the frontier question had been settled. On December 16, 1925, the Council of the League of Nations endorsed the decision of its Commission of Inquiry in regard to the boundary and called upon the British Government to carry out certain recommendations suggested by the Commission. These were, first, to conclude a treaty for twenty-five years with Iraq; secondly, to employ Kurds in the local administration of Kurdish territory; and, thirdly, to introduce measures likely to ensure pacification, to afford equal protection to all the elements of the population, and to provide facilities for the movement of trade across the frontier. On March 2 last the British Government was able to report to the League that it had concluded the requisite treaty with Iraq, and at the same time it forwarded a Memorandum on the administration already in vogue in the Kurdish districts of Iraq. The Council took note of and endorsed the former; the Memorandum it passed on to the Mandates Commission with a request for its observations upon it. The Commission was also requested, when examining the annual reports concerning Iraq, to take into consideration the third recommendation made to the British Government by the Council in its resolutions of December 16, 1925.

It may be expected, therefore, that the main task of Sir Henry Dobbs, High Commissioner of Iraq and Great Britain's representative before the Mandates Commission, will have been to satisfy the members on the subject of Iraqi administration of Kurdish districts and on those other measures which the Commission of Inquiry recommended for the model government of the country. Now the recommendation regarding the employment of Kurds was hardly as original as its inclusion in the Commission of Inquiry's Report would imply, for the reason that Count Teleki and his colleagues found the system already adopted when they were in Mosul vilayet early in 1925. Consequently the Memorandum submitted by the British Government in March last was able to disclose a state of affairs that showed that, whereas Kurds form about seventeen per cent. of the population, twenty-four per cent. of the whole police force of the country, fourteen per cent. of the Army, and twenty-three per cent. of the railway employees are Kurds. In the Kurdish districts themselves an overwhelming proportion of the local officials are Kurds, and in the Chamber fourteen Deputies out of eighty-eight. As for the other recommendations it will be of interest to see whether the Mandates Commission adopts an inquisitorial tone on matters which are governed more by the spirit than by the letter, or is careful to bear in mind that by the method of the exercise of its powers it can do much to hinder as well as to help the cause of good government.

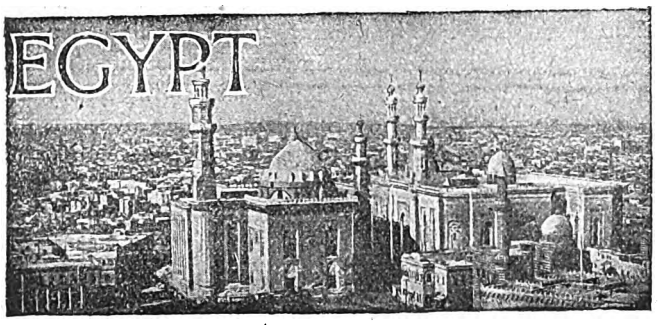
The Near and Middle East*

From Our Own Correspondents.



Cairo, October 30.

Cotton versus Politics.

Cotton continues to be the absorbing interest of the heart and mind of the Egyptian public. One hears nothing else discussed, and the new-comer might well be pardoned if he doubted all he had heard about the extent to which politics dominated the country. The decision to limit the acreage to one-third of every holding during the next three years—a wise measure since, if properly enforced, it will have the effect of giving the land a much-needed rest and of increasing the cereal production and so tending to cheapen bread—has by no means weakened the controversy that has been waged concerning the action the Government should take to assist the grower. The large landowners—it is they who are mainly responsible for the campaign—are still not satisfied. By some specious process of reasoning, speculation is held to be the real cause of the drop in prices, and great efforts are being made to get the Government to enter the market as a purchaser of contracts in order to fight the "bears." So far Adly Pasha and his colleagues have sternly set their faces against an operation of such a nature, and in spite of the pressure being exercised there would appear to be little risk that they will make any concession in this direction. But it is certain that the question of the Government's cotton policy will be the subject of early debate in the new session, and in view of the views held by the interested parties the discussion bids fair to be lively if not acrimonious.

The Governor-General of the Sudan.

Sir John Maffey's appointment has aroused little comment in this country. The Arabic Press contents itself by noting with satisfaction that the provisions of the 1899 Convention have been respected, and that the approval of King Fuad was obtained before the name of the new Governor-General was made public; nowhere in Egyptian circles has any criticism of the choice been voiced. In British quarters also there is no criticism. Although everyone had been accustomed to regard the post as, so to speak, the plum of the Sudan service, there has been none of the opposition which one might have expected a radical departure such as this appointment represents to call forth. There seems to be a feeling that, given a sound senior staff such as is known to exist at Khartoum, it may not after all be such a bad thing to have as Governor-General a man who can bring to bear on the great problems to be tackled during the next few years a mind free from any local bias and trained in the administration of Oriental peoples in other parts of the world. And the fact that the choice of the British Government has fallen on such a prominent figure as Sir John Maffey would no doubt account for the equanimity with which the news of the appointment has been received.

Sir Said Zulfikar Pasha.

Widespread sympathy has been expressed with Said Zulfikar Pasha, the Grand Chamberlain, who had an apoplectic stroke a few days ago. He is making good progress, but it is feared that he may have to give up active work. This will be a serious matter for the Palace, where he has come to be something of an institution. By no means an old man, Said Pasha has served four Sovereigns in succession, first entering the chamberlain's department under the Khedive Tewfik. He rose to be Grand Master of Ceremonies under Abbas Hilmy and, when the régime was changed on the outbreak of war with Turkey, he became Grand Chamberlain under Sultan Hussein. On his succession to his brother King Fuad retained him in that post, which he still holds. For forty years, in fact, Said Pasha has used the same room as his office in Abdin Palace, a continuity of service, which is remarkable in view of the great political changes that have taken place during the past years. His tact, courtly manner and sympathetic impersonality have stood him in great stead in the very difficult and delicate work he has at times been called upon to carry out and he has been one of the most valuable and faithful servants the Throne of Egypt has had.

Should Said Pasha unfortunately be compelled to give up active work, no one will grudge him the rest to which his services fully entitle him. During the past fourteen years he has had no holiday beyond an occasional day to visit his properties or to go out shooting, and this must to a great extent be held responsible for his present illness. But it is difficult to see how the Palace is going to get on without him, since he was the pivot around which everything revolved there, and the suggestion has been made that, in view of his unrivalled experience and knowledge of protocol, he should be retained as an honorary Grand Chamberlain so that, while the heavy part of the work need no longer fall on his shoulders, he could be at hand to advise in emergency.

CYPRUS.

Nicosia, October 25.

The New Governor.

Interest centres in anticipations regarding the new Governor, now so shortly expected. Almost everything that could be gleaned from the London Press respecting Sir Ronald Storrs has been published in the Greek papers, or is discussed in cafés and public places. Forecasts are in general favourable, and are largely based on statements made, more or less publicly, by Sir Ronald himself.

Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

Digitized by Google

and on accounts of interviews in England. Some papers are even alarmed by the number of promises already made, the only fear being lest the pace towards progress may be too rapid for the times, and too good to last. "The Governor," says one paper, "promises to do in four or five years what his predecessors have failed to do in fifty." But it is to be hoped that Sir Ronald will succeed in transforming Cyprus into what all High Commissioners have said it should become, "the Garden of the East."

It need hardly be said that Cyprus, which, like most parts of the Levant, has suffered terribly from centuries of neglect and mistake, will long present only too many problems, in almost all directions, for consideration. A forward movement in agricultural development, with the aid of loans, is no doubt ardently desired, and needful. A more liberal policy in the granting of seed corn, on easier terms, greater experimentation over selection of seeds, and introduction of new products; the publication of reports regarding artesian borings and forest matters, are among the calls that are now being made.

The Fez and the Police.

Dissatisfaction with the fez for the police force is gaining strength. That a sentiment in its favour should be kept alive on the part of the Turks, who form so large a part of the body, is natural. But this is now weakened by the fact that under the present President of the Ottoman Republic the fez is entirely superseded by hats, and can no longer be regarded as a distinctly Muslim headdress, as hitherto. It of course affords no protection whatever for the eyes and head generally, especially during the burning heat of summer. The movement for its abolition, and the adoption of a peaked cap, will no doubt continue to grow.

General News.

Sir Sydney Nettleton, Chief Justice, Colonel Gallagher, Chief Commandant of Police, and Mr. Noble, Director of Agriculture, have returned from leave.

An exhibition of forest produce and workmanship, which is now held annually for a week at Nicosia, with such successful results, will be opened on November 1.

Temptations have been recently offered to Cypriots, who so largely seek their fortunes abroad, to migrate to Argentina and Brazil. The Press is wisely urging great caution and the need of full information on the part of young Greeks. Many have learned lessons in late years in the U.S.A. and elsewhere.

An increase in the Government grant for teaching English in the Higher Schools is promised, and an addition to the teaching staff has already been made, to meet an obvious need.

At a recent meeting of Greek members of the Legislative Council, to discuss various inland matters, it was decided to seek an interview with Mr. G. A. Dawe, of the Colonial Office, at present the guest of the Chief Justice.

GREECE.

Athens, November 1.

The General Election.

Well-wishers of Greece can seldom have felt so pessimistic about her as at the present moment. There is, it is true, a temporary calm, but it is artificial. The actions of the Government are shrouded beneath a pall of obscurity, even the corner of which the newspapers are not permitted to lift. Everyone is waiting for the elections of November 7. Even when they are over, another fortnight will elapse before the results are made known.

A decisive result is not expected. Expert calculation foretells a narrow Monarchist majority—it being assumed that the election is a straight one. The difficulty is that even if it is straight, few will believe it to be so. That the Officers' Club, the power behind this and previous Governments, will interfere, is stoutly denied by General Kondylis; but the denial itself is ominous. The Monarchists are themselves divided into two, or more camps, and if, on the strength of a Monarchist majority, their extremists attempt to restore the present dynasty, trouble will certainly follow. The only hope is if, in the event of such a majority, the moderate Monarchists, under General Metaxas, could persuade their fellows to be content to carry on with the existing Constitution until a favourable occasion arises—and it will be a long time coming—to bring up the question of restoring—if not the present King—some scion of the same dynasty. Unhappily, moderate opinions seldom carry the day, and hence the profound pessimism which is felt with regard to the immediate future.

The Electioneering Campaign.

Meanwhile, the party leaders are stumping the country, and many of them have penetrated into parts of Greece hitherto almost unknown to professional politicians. M. Papanastasiou has been at Yanina, and Thessaly has enjoyed the visits of quite a number of ex-Prime Ministers and others, who have been received by "enthusiastic crowds" or "with a stony and hostile silence."

The Government has wisely prohibited political demonstrations in Athens, and the long procession of motor cars, bearing the portraits of General Metaxas on long poles or festooned around their bonnets, which held up the traffic in Stadium Street a few days ago, is the last of its kind. If the sixty-four political parties had all adopted this method——

Amid the political welter and confusion penetrates a ray of hope—and that is the essential sanity and gaiety of the Greek character. Not here the dour pessimism of one neighbour, nor the overbearing provincialism of another, but a light-hearted acceptance of a state of things (which the Greek knows from experience is not likely to improve), and a striving for an ideal (which in his heart he knows will not be realised). Unlike some other peoples, he acknowledges his defeats and, though vain, is never pompous. Over-susceptibility to criticism, over-receptivity to ideas, therein lies his weakness, but also, though he may not himself believe it, the possibility of better things.

Greece and a Helping Hand.

What Greece has always required is a strong helping hand. Unfortunately she snatches first at one hand and then another, and these are not always either strong or helping. What she can do with a little assistance from outside is well illustrated by the Report of the Refugee Commission just published. This embodies results which do credit to Greece, to the refugees themselves, as well as to the Commission. One can only hope and pray that the country will recover sufficient stability to justify a further loan, and enable the Commission to complete their work.

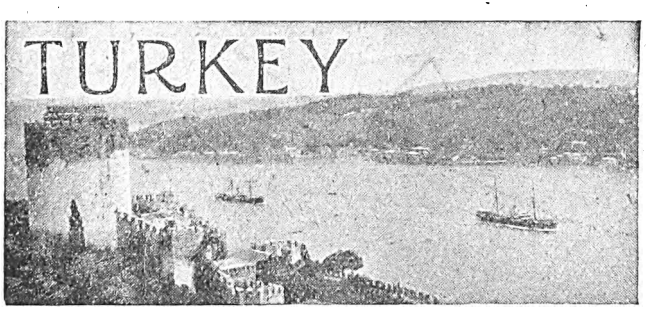
A review of the work accomplished by the Save the Children Fund, an organisation working with British funds and British personnel, which is now leaving Greece, is also of great interest. The mere figures, of course, give no idea of what the Fund has really done and of what it has meant. It has been purely a work of charity, the distribution of necessaries of life, food and clothing, to thousands who would otherwise have gone without them. The number of lives, old as well as young, that have been saved by it will never be known. Greece will never forget the help received from the British Empire in one of the most difficult times in her history.

Miscellaneous News.

The case of an English governess in Athens accused of stealing jewels to the value of the £2,000 from her employer, the Managing Director of the General Bank of Athens, is attracting a good deal of attention. We have it on good authority that the governess is considered to be absolutely innocent (though no judicial decision has yet been given), but there are sinister elements in the case. What is really on its trial is Greek justice, and the British Colony is eagerly awaiting a decision which will not only exonerate an innocent woman but will also explain the evidence of the witnesses on whose testimony she was committed for trial. There are many English governesses and nurses in Greek families, and one likes to believe that in such a case as this, they can count on the zeal and sense of justice of the Greek police and tribunals.

The British School of Archæology began its 1926-1927 session on November 1. The Director, Mr. A. M. Woodward, is detained in England for the annual meeting of Subscribers at Burlington House, on November 2, at which the Prime Minister takes the Chair.

Sir Ronald Storrs, Governor of Cyprus, and Lady Storrs have been staying at the British School, on their way to Cyprus.



Constantinople, November 2.

The Ghazi's Speech.

The Grand National Assembly began its eighth session yesterday, when Mustapha Kemal Pasha delivered one of his rare speeches. As usual, he recapitulated the Government's main accomplishments during the past year, and enumerated the latest national developments. This year's speech—even including the reference to the plot against the President and the Government—(as it resulted in the liquidation of a previously unknown quantity) provides the most satisfactory review of the situation of Turkey which has been possible since her birth as a Republic. In yesterday's discourse there was no Mosul spectre to deaden the satisfaction of other accomplishments; this year there are no apprehensions (at least so it appears) of future trouble in Kurdistan; nothing whatsoever but an account of work well done.

The Ghazi traced the points upon which the Assembly must concentrate their attention during the actual session: he emphasised the need for economic and agricultural expansion, and explained the absolute necessity of obtaining expert advice and direction on matters on which Turkey knew, as yet, litttle. Mustapha Kemal made passing mention of certain projects which would come before the Assembly for immediate debate—these concern giving effective encouragement and protection to ensure the development of industries in Turkey.

On the whole, according to her President's speech yesterday—which the Press describes as "marvellous"—Turkey certainly appears to have registered a great improvement on her situation of last year and if the plans outlined for the coming year are executed, the Presidential address next year cannot but review a situation entirely unprecedented in Turkey.

Turkish Shipping.

Turkish shipping appears likely to undergo difficulties owing to the coal crisis, which is now making itself felt. Stocks from England having been exhausted, the present Turkish output is proving entirely inadequate, especially now that winter is setting in. Many shipping companies have been forced to reduce their sailings, and there is even some possibility of modification in the public transport services. While this year's total output of coal has been considerably greater than that of last year, the coal strike in England has been responsible for Greece's importing large consignments from Turkey. Further exportation of coal is, however, now prohibited, and the question, which is causing grave apprehension, is being dealt with by the Government.

The Ghazi's Second Statue.

The Italian sculptor, Signor Pietro Canonnica, who is now visiting Constantinople at the invitation of the Municipality, is to undertake the work of the second statue of the Ghazi which is to be erected at Taxim Place. A big space previously occupied by a kinema and shops has been cleared for this purpose and the equestrian statue and pedestal are expected to cost £T150,000 of which, up to the present, only £T30,000 is available.

Signor Canonnica has caused great satisfaction to the Press in general by wholeheartedly opposing the demolition of various historical edifices for which certain people have been agitating. The craze for progress appears to have deprived some individuals of their sense of proportion: otherwise surely the robbing of Constantinople of its treasured links with the past could never even have been contemplated.

Jazz Bands in Anatolia.

Jazz bands are now the vogue in Anatolia. The violin, supplemented by an occasional flute and the inevitable "tambour," which have for scores of years constituted the orchestras whose weird music sufficed for the native dances in the interior, are now being ousted by the crashing jazz of the banjo, saxophone and the hundred and one other new fangled instruments of the present-day dance world. Conclusive evidence of this change has been afforded by the arrival here some very short time ago of the proprietor of a Trebizond hotel. He came hither solely to engage a jazz band. The success of his venture was so striking as to result in drawing all the clientèle of his business rivals to his own establishment. One of his affected contemporaries is now in Constantinople recruiting an "opposition" jazz band—which task has been rendered more difficult by the arrival of yet another café owner from Castambol. Jazz band shares are soaring.

General News.

Constantinople, whose population is inherently musical and which in this sense profited enormously by the Russian influx four years ago, is promised a fine winter musical season. At the present moment José Iturbi, the Spanish pianist, is giving a series of concerts here, and in a month's time Kubelik is to arrive. Later on other celebrated singers, pianists and violinists will keep their already long-made engagements; many prominent members of the Académie Francaise are also billed to visit Constantinople soon.

According to the Press the administrations of certain schools and even official departments have neglected to hang photographs of Mustapha Kemal Pasha in their establishments, while showing portraits of other Turkish personages. Orders have been given, it is stated, that such procedure must be immediately remedied.

Book Reviews

THE STRUGGLE FOR PROTECTION.

***MERCANTILISM AND THE EAST INDIA TRADE."* By J. P. Thomas (London: P. S. King. 8s. 6d.)**

Mr. Thomas sets out to trace the beginnings of Protectionism in England, and his book is a contribution to English rather than Indian history, but India comes into it because the old trading company was a protagonist in the fight. The company sought freedom to bring silk and cotton goods into England, the English silk and wool interests sought, and eventually obtained, Protection against the competition of cheap Asiatic labour, and in the course of the prolonged and vigorous controversy which ensued the main lines of the theory of foreign trade were gradually hammered out. Mr. Thomas has soaked himself in the literature of this controversy, literature which is as racy as it is voluminous, and he gives a clear, and commendably concise, summary of it, with adequate references for those who desire to go to the sources. Only a specialist could say whether the work is really well done, whether the survey is complete, the documents rightly interpreted, and the balance held fairly. The present writer, not being a specialist in the period, can say only that the book strikes him as distinctly good, that it tells a clear, and well-documented story, and that, for a work of the kind, it is easy and interesting reading. As so often happens with writers whose studies began in India, there are occasional slips in dealing with specifically Indian topics. Terry was not an English merchant (p. 8), but a charming, and decidedly loquacious, padre: a "Bengall" was not necessarily a fine muslin (p. 26), for the term was sometimes applied to closely-woven calico; "Salempore" was not a kind of chintz (p. 30), but a plain calico, which, like most other calicos, could be printed in colours when desired; "Moorie" was not blue cloth (p. 30), but could be had brown, white, red or blue; and there are a few other mis-descriptions of the same kind. Such matters, however, lie outside the scope of Mr. Thomas' special study, and, taking them all together, they do not detract appreciably from the value of his work, though they can be corrected with advantage in a subsequent edition.

THE BUDDHA'S REFORMS.

"FURTHER DIALOGUES OF THE BUDDHA" Translated from the Pali, by Lord Chalmers, G.C.B. (The Oxford University Press. 12s. 6d. net.)

That mysterious convolution of the brain which is the seat of genius cannot be profitably studied apart from the social environment in which its possessor has been born. Every human being comes into the world with a heritage influenced by the education which he receives. He who attempts to judge Shakespeare's output without any knowledge of the Elizabethan era obtains a blurred and one-sided impression of his amazing faculties. Lord Chalmers has, therefore, done well in prefacing his translation of the Buddha's dialogues by a sketch of the currents of religious thought which prevailed in India during the seventh century B.C. It was a period of revival. Thinkers who had been "suckled in a creed outworn" longed to get behind the ironbound rites of Brahminism in order to attain union with the Supreme Soul; but they were sorely hampered in the search for truth by the beliefs and prejudices of their time. Asceticism was then the accepted mode of religious culture, both as a source of inspiration and the outward sign of personal holiness. The Buddha had tried self-mortification and found it wanting:—

> Once, when the Lord was staying in the Angas country, where they have a township named Assapura, he addressed the listening Almsmen as follows: "I say it is not the robe that makes the recluse, nor nakedness, nor dust and dirt, nor living under a tree, nor living in the open, nor never sitting down, nor punctilio in regimen, nor intoning texts, nor a shock head of hair."

He exhorted his disciples to take the Middle Path between asceticism and self-indulgence, thereby incurring much odium from Pharisaical Brahmins.

In his day India was honeycombed with warring sects. One teacher held that virtue and vice were meaningless words; another that annihilation supervened on physical death; a third taught that, inasmuch as evil was bound to die away automatically, there was no necessity for individual effort; and a fourth carried agnosticism to extreme lengths. Although Brahminism and its "orthodox" developments still swayed the minds of millions, every theological problem that perplexes our souls to-day had been threshed out in that wonderful sixth century. The Buddha's attitude towards rival creeds is shown in the rules which he laid down for admitting converts. He insisted on a four months' probation, but made an exception in favour of Brahmin postulants, just as our Anglican Church recognises the Orders of the Roman Catholic cult. He banned all speculation and philosophy as being useless. "What have I left untaught?" he asked, while sojourning in Anátha Pindika's pleasaunce.

> I have not taught that the world either is or is not eternal; that life and the body are either identical or distinct; that after death a truth-finder either passes or does not pass to a further existence. And why have I left these things untaught? Because they are not profitable nor fundamental to the higher life; because they do not conduce to weariness with mundane things, to passionlessness, to purgation, to tranquillity, to insight, to full enlightenment, to Nirvana.

The Buddha tacitly adopted many doctrines which had long been current, and retained the nomenclature of existing creeds while he inspired it with novel meanings. His original contributions to religious thought were twofold. He emphasized the mind's sovereignty, and taught that man's first duty was to view all phenomena as a sequence of causes and effects. More important still is the fact that Buddhism, moulded by this transcendent reformer, became altruistic; that "it embraced the whole universe in thoughts of goodwill and pity and compassion."

THE WEEK AT HOME.

Political Changes.

Colonel F. S. Jackson has been succeeded as General Manager of the Conservative Party by Mr. J. C. C. Davidson. The Party professes itself delighted with the appointment. Certainly the new Manager is young and energetic—qualities which may be more needed in the future than some Ministerialists appear to imagine.

In the Liberal Party Sir Godfrey Collins has resigned the position of Whip. This resignation, made more or less inevitable by Lord Oxford's resignation, would appear to help Mr. Lloyd George's cause. It is thought that "L. G." will now get definitely the upper hand in the distracted fragment that is the Liberal Party.

Yet whatever the ultimate fate of the Liberal Party, it will hardly be hastened by the demission of Commander Kenworthy to the cause of Labour. This naval politician, as is well known, has for long commanded a considerable Labour following in Hull. He is energetic and earnest, but overgiven to omniscience. For a man of ambition, he has taken a surprisingly long time to discover that the present Liberal Party leads nowhere.

Municipal Elections.

You may form what impression you like from the Labour gain of 150 seats at the election to the local councils last week, but you can scarcely suppose that the result will be discouraging to the enemies of the Government. It is, of course, the fashionable thing to attribute this amazing success of Labour to apathy on the part of the electorate generally, and to pretend that it is in no way connected with the Government's policy in the coal problem. Fashions are always right, of course: but then they also change. My impression is that municipal voting this year had a distinct relation to national sentiment, and that it had been better for the Government had they never intervened in the coal crisis at all. This, however, is purely a personal opinion.

The Elusive Coal Settlement.

Hopes are high now of a "settlement" of the coal question; but the men are not yet back at work. The Government's latest proposals are, apparently, that district agreements should be negotiated, together with the establishing of some national co-ordinating machinery. It is understood that the coal-owners are irrevocably opposed to any sort of national organisation among the miners, but there is still considerable obscurity over this point. Nor is the miners' attitude very clear. It seems, however, that they are now prepared to concede more than anyone thought they would. Unless very definite provision is made for a national organisation, all the miners will have—if they accept—is the Government's vague promise to see that the owners act up to their word. But whether now, or at some future date, "victory" in the long struggle is indisputably the owners'.

Coal Permits.

Last week coal permits were introduced; so once more we are back in the atmosphere of war-regulations. Naturally there has been a good deal of grumbling—some of it not unjustified—but these permits had obviously been necessitated by the unscrupulous use to which the wealthy put the means at their disposal for obtaining large supplies. Hitherto stocks had been loosely distributed—which meant that the poor and honest men were the hardest hit. Certainly in this matter of producing coal a sense of civic duty has not been too conspicuous; by which are implied, not deliberate malefaction but rather thoughtlessness and careless greed.

But it has also been reported that some have obtained more than their fair share of coal and then raised its price against poorer purchasers. It was high time—even at the cost of having to seek permits—that this sort of thing was ended. Obviously there are other people besides the coal-owners who do not fully realise the national, as opposed to the individual, aspect of the coal question.

Imperium in Imperio.

There is now in existence a domestic question (and gaining increasing prominence) that would, if people would but study it, help to an understanding of the Zionist problem in Palestine. I refer to the dispute arising out of the presence of the Irish in Scotland. Already the cry has gone out that Scotland is changing hands, and long tales are told of the dangers of uncontrolled immigration.

Last week the Secretary for Scotland received a deputation from the Presbyterian Churches of Scotland to hear Scottish views on this subject of the invasion of Scotland by Irish immigrants. It was claimed by the Scots that the Irish immigration had been so considerable that educational, civic and political institutions had been affected. What was asked of the British Government was that immigration should be controlled. And when it was officially implied that the hostility of Ireland might be encountered were the Government to intervene, a Scottish minister promptly pointed out that the danger of the disruption of the Scottish nation through uncontrolled immigration was far greater than any danger that might arise from the antagonism of the Irish Free State.

Now this dispute is, of course, a very old one; but in recent years it has become bitter. In the last few years the Irish Clydeside navvy has been looked upon as an alien, partly because he is present now in such large numbers, and partly because he is Roman Catholic in religion. The root trouble is, in other words, that these Irish, having their own standards of culture, living and so on, do not wish to become Scots. Their increase and persistence, moreover, coincides with a big Scottish emigration overseas, implying really a transformation of populations. An open fight has not come yet, but it is possible that two civilisations are to be in combat. And yet, presumably, the Catholic immigrants would sympathise with the Arabs of Palestine, while the Scottish Presbyterians would be expected to support the Zionist immigrants!

The Biter Bit.

An amusing case has just been decided in the Courts. An eminent dramatic critic, Mr. James Agate, brought an action against the *Guardian*, for attacking him in a book review in his capacity as a dramatic critic. The

review (by Mr. Ellis Roberts) stated that Mr. Agate had neither taste nor style, and that the fact that he was regarded as one of the leading men in his job "illustrates how pitifully that important branch of criticism has deteriorated, and explains a great deal that is wrong with the modern stage." The jury awarded Mr. Agate a farthing damages.

The decision is an important one, because the sort of thing contained in this review is by no means unique: it is common in the more virile type of journalism. The surprising matter is that a man of Mr. Agate's intelligence should have thought it worth while to notice a hostile review. One always imagined that critics who hit hard (and nobody will deny to Mr. Agate the power of his punch) were only too pleased when other critics retaliated. In any case, this decision is not likely to diminish the already too exiguous band of critics who can and do say what they mean.

The Bookmakers' Strike.

For a few hours last week the coal lock-out was superseded in popular interest by the news of another withholding of "labour"—by bookmakers. Either as a protest against Mr. Winston Churchill, or else as a protest against the somewhat difficult regulations concerning the new betting tax, the bookmakers last week at Windsor refused to make a book. Why they should have done so it is difficult to understand, as it was generally believed that the new tax would be passed on to the punter, who, incidentally, is largely absenting himself from races until he sees how the new fangled system really works. But already the bookmakers are at their old immemorial game of taking other people's money. No strike on their part is ever likely to win public sympathy. Imagine the bookmakers of France contributing funds to the upkeep of the starving English bookies!

Sir Thomas Beecham.

The departure to America of that extreme but artistic individualist, Sir Thomas Beecham, is a portent to the music of this country. Sir Thomas is going to live in America because, in effect, he is not wanted here. The state of orchestral music in this country, always bad, has in his opinion been rendered hopeless by the popularity of broadcasting, which he stigmatised in violent terms. His criticisms of mechanical transmissions were, however, the common talk of musicians, who are not likely to disagree with his statement of microphonic distortion.

To lose such a conductor as Sir Thomas is extremely sad. There was no one like him in England (and very probably no one in Europe) in the interpretation of masters like Mozart and Delius. Nor was his genius to be seen solely in concert work. In opera, too, he was magnetic. The heavy German, or romantic Italian stuff he did not excel in, but to hear him in a Bach or Russian opera was a delightful revelation.

He is, of course, but following in the footsteps of scores of excellent English musicians in going to America, where, it is said, people are still willing to hear real music. Whether, however, his temperamental and cultured soul will find rest among the wealthy cosmopolitans, who can absorb unlimitedly but cannot create, is another matter. But there should be tears of shame at his going.

Art Galleries.

Admiration of the sailing ship and lamentation of the good old days when "Cutty Sarks" roamed the high seas are by way of becoming a literary cult, so strong has been the effect of poets like Masefield and novelists like Conrad. In the exhibition of water-colours which Mr. Arthur Briscoe is now holding at the Galleries of the Fine Art Society, however, there is assuredly no affectation. This show, called appropriately and in pride, "Square Rigged and Fore and Aft," is the real thing. Mr. Briscoe, whose etchings have of course been valued for some years, is not only a water-colourist of quality: he is a true seaman also. Both literally and artistically he is at home on the sea. Ships and seamen, in good and in foul weather, he delights in portraying. For those who are denied frequent access to the waters, his show is a bracing reminder or call; there is throughout it the eternal smack of the salt.

Art of a very different quality is to be seen in Mr. Edward Wadsworth's exhibition at the Leicester Galleries, Leicester Square. Comparison between the two artists would be futile, for whereas both know the sea (Mr. Wadsworth, by the by, served during the War in the R.N.V.R. in the Eastern Mediterranean) the one loves directly to represent it, the other takes from it only formal and fantastic imagery. But in these paintings in tempera of Mr. Wadsworth there lies considerable fascination, and, of course, they are done with very precious skill.

The student of modern English art will certainly be stimulated by a visit to the New Chenil Galleries at Chelsea, where a winter exhibition has just been opened. For the most part the bigger men in British art are not represented, but there is abundance of indicative work. Such artists as Powys Evans, Barbara Shiffner, or P. H. Jowett show the decided movement which modern art is making. On the whole it is a most interesting exhibition. There may be some who will cavil at the formal and hideous blasphemy of William Roberts' "Christ Driving the Money-Changers from the Temple," just as some will refresh their rage with Epstein's sculptures, but there will surely be general agreement on the merits of such works as Sine Mackinnon's, "Chelsea, Summer Evening," James Pryde's "The Great Arch," "The Water Meadow," of Sylvia Gosse, or "Blewbury Downs" of J. D. Revel (who, by the by, had in these galleries recently some individual paintings of Baghdad).

ALTER EGO.

Ghazi Mustapha Kemal Pasha opened the National Assembly on November 1, in the presence of the majority of the Kemalist Deputies and a few of the Opposition Deputies, but the latter's leaders were absent.

General Mazarakis and General Vrontamitis have been appointed by the Greek Ministry of War to be members of the Commission which is to arrange for the exhumation and transport to Athens of the body of a Greek "Unknown Soldier" from a grave near the frontier. The body will be reinterred in front of the Palace at Athens.

NEWS IN BRIEF.

Lord Plumer, High Commissioner for Palestine, paid his first visit to the Metullah district.

General Kiazim Pasha has been re-elected President of the Turkish Grand National Assembly.

A Dutch steamer is loading coal for Egypt at Sydney. The chartering of further vessels to carry Australian coal both to Egypt and the Argentine is being arranged.

M. Molloff, the Bulgarian Minister of Finance, left Sofia for London on November 8, in order to make arrangements in regard to the Refugees Loan.

Abdel Khalek Pasha Sarwat, the Egyptian Minister for Foreign Affairs, returned to Alexandria on November 6. He expressed himself as delighted with his European visit ,and his experiences and reception in London appear to have deeply impressed him.

Colonel Wedgwood, M.P., was the guest of honour at the celebration in Jerusalem on November 3 of the ninth anniversary of the issue of the Balfour Declaration. A grateful message was sent by the Zionist Executive to Lord Balfour.

Sir T. Vijayaraghava Achariyar, who was Commissioner for India at Wembley and opened the Canadian Exhibition in Toronto, has returned to Bombay with proposals and suggestions for increasing the volume of trade between Canada and India.

H.M.S. Endeavour, Commander S. A. Geary Hill, D.S.O., is ordered to leave Sheerness for the Red Sea about November 15 to resume surveying duties. The Endeavour returned home in July to refit, and has since been recommissioned with a new full crew from Chatham Depôt.

At the annual business meeting in Edinburgh of the Royal Scottish Geographical Society on November 2, Viscount Novar, the President, intimated that the council had decided to award the Livingstone Gold Medal to Viscount Allenby and to Sir Alan Cobham.

An investigation by the Turkish authorities of the work of the Y.M.C.A. in Constantinople, undertaken in consequence of local accusations that that organisation was proselytizing among Muslims, has shown that these charges are unfounded.

Lord Lloyd, British High Commissioner for Egypt, and Lady Lloyd had an audience of the Pope on November 4. They were accompanied by Sir Odo Russell, British Minister to the Holy See, and conversed with the Pontiff concerning Egyptian affairs. In the evening Lord Lloyd was received by Signor Mussolini. Lord and Lady Lloyd left Brindisi for Alexandria on November 6.

The Duke of Spoleto, son of the Duke of Aosta, attended by Marshal Badoglio and a large suite, arrived in Bucharest on November 4, and was met at the station by the King, the Prime Minister, members of the Government, the Italian Minister and the personnel of the Italian Legation. The Duke and his suite were the King's guests for four days, and handed the official invitation to the King and Queen of Roumania to visit Italy.

The Yugoslav Cabinet has approved the Bill reducing to 12 the 18 Ministries now in existence.

Herr von Mutius, the new German Minister to Roumania, presented his Letters of Credence to the King on November 2.

A message from Teheran states that the Persian Government has presented to Parliament a Bill for the sale of Crown Jewels valued at £8,000,000, and Crown lands estimated to realise £5,000,000. The proceeds of both are to form the capital of the projected State Bank.

Sir Ronald Storrs, the Governor-designate of Cyprus, reached Jerusalem at the end of last week for a stay of about a fortnight to wind up his work as District Commissioner, a post to which no further appointment is to be made, as in future Jaffa is to be the administrative headquarters of Southern Palestine.

The Turkish Government has decided to entrust the reconditioning of the battle cruiser Yawuz, formerly the German Goeben, to a French company, but the contract has not yet been signed. The repairs will be effected at Ismid, where a new floating dock, built under German auspices, is now ready.

NOTES OF THE WEEK.

(Continued from page 538.)

secret soul; we know, in fact, that he has been repudiated by the larger section of Zionists who prefer the slower way of what is immediately practicable in Palestine. But it is certainly of the highest interest to point out (1) that the Arabs can scarcely be blamed for supposing that Mr. Jabotinsky speaks the truth, i.e., thte Jews wish "to create in Palestine a country where the Jews will no longer be in a minority"; and (2) that it is, therefore, not only Arabophil Englishmen who stir up the muddied waters of discontent between Arab and Jew. If the Holy Land were ever to become a Crown Colony administered by Zionists and in the interests of Zionists, not only would the declared purpose of Great Britain be nullified, but also the whole spirit of Article 22 of the League of Nations Covenant would be set at naught. It is to be hoped that these remarkable sentiments of Mr. Jabotinsky will not escape the notice of the Permanent Mandates Commission, whose direct recommendation of controlled immigration is thus and so forcibly opposed. If Mr. Jabotinsky is to go up and down Palestine expressing views hostile not only to Great Britain's pledged word but also to the League's rulings, the co-operation of Arab and Jew, of which recently there have been promising signs, is likely to be much more remote. That the present economic position of Jews in Palestine is hard is to be seen from the fact that 603 Jews emigrated in June, 840 in July, and 795 in September. Mr. Jabotinsky in a sense, therefore, chose his time well. When the present financial crisis is over, however, a swing round to the moderate position adopted by the majority of Zionists is to be expected. In the meantime it is at least open to doubt whether the public expression of such sentiments in Palestine is desirable, more particularly at the very time when strenuous efforts are being made by the Mandatory Power to convince the Arabs of the baselessness of their fears.

PERSONAL AND GENERAL

TO-DAY

November 11, 1926 (New Style).
October 29, 1926 (Old Style).
Jomada I. 5, 1345 A.H., of the Muslim Calendar.
Kislev 5, 5687 of the Jewish Calendar.

Mme. Ferid Bey left London last week for Paris, and will be away for about five weeks.

Sir Cyril Butler left London on November 4 for Marseilles, embarking in the Rajputana for India.

Viscount Inchcape left London last Saturday for Paris, to attend the Suez Canal Company's monthly meeting.

Sir Ronald and Lady Ross, who are on their way to India, on November 2 arrived at Gibraltar, where they stayed a week.

Princess Andrew of Greece visited the King and Queen at Buckingham Palace on November 7 and remained to luncheon.

Lady Loraine, Lady Clerk, and Lady Grant Duff had the honour of being received by Her Majesty on November 6.

Sir Valentine Chirol was presented on November 4 with his badge of Knight Bachelor by old colleagues of the staff of *The Times*.

General Sir George Milne (Chief of the Imperial General Staff) had the honour of being received by the King at Buckingham Palace on November 5.

Mr. Neville Smith-Carington, M.P., and Mrs. Smith-Carington left for Ceylon and India on November 6, and expect to be away until early in February.

General Jaafar Pasha el Askari, Diplomatic Agent of Iraq in London, has been recalled to Baghdad to form a new Cabinet. He left London on November 9.

A reception was given in honour of the Maharaja of Burdwan at 21, Cromwell Road on November 3 by the National Indian Association and the Northbrook Society.

Sir Rennell Rodd has been elected president of the Byron Society, in sucession to the late Major Edward Atkin. The Rev. D. R. Fotheringham continues to act as Secretary.

The Maharaja of Baroda, the Maharaja of Kapurthala, and the Maharaja of Alwar left London on November 4 by the Bombay express to join the Rajputana at Marseilles, on their return to India.

Sir Percy Loraine, Bt., was received in audience by the King at Buckingham Palace on November 2, and kissed hands upon his appointment as His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Athens.

Sir Charles Robert Tyser, of Villa Garbarino, San Remo, Italy, late Chief Justice of Cyprus, an authority on Turkish law, who died on August 23, aged 77, left estate in his own disposition of the gross value of £32,841, with net personalty £32,042.

We regret to have to announce the death on November 7, at Bitton, near Bristol, of Mr. William Kaye, late of the Indian Civil Service. Mr. Kaye, who was 88 years old, was educated at Haileybury, and went to India at the beginning of 1858.

The King has approved the apointment of Mr. Arthur Norman Moberly, C.I.E., I.C.S., to be a member of the Executive Council of the Governor of Bengal. Mr. Moberly will take his seat on the Council on November 15.

Sir John Maffey, Governor-General-Designate of the Sudan, will be the guest of the Royal Colonial Institute at luncheon on Tuesday, November 23, at the Hotel Victoria. Lord Stanley of Alderley, Chairman of the Council, will preside.

The King and Queen gave a Dinner at Buckingham Palace on November 4, at which the Prince of Wales, the Duke and Duchess of York, the Princess Mary (Viscountess Lascelles), and Prince and Princess Arthur of Connaught were present, for the Dominion and Indian Delegates attending the Imperial Conference in London.

Mrs. Woods and Mr. H. Charles Woods gave a small tea party at 171, Victoria Street, S.W., in honour of Miss Jeppe on November 3. Among others present were:—The Hon. Lady Norman, Sir Edward Boyle, Hester Lady Hart, Mr. John Baring, Lady Scott Moncrieff, Mr. A. C. Wratislaw, Lady and Miss Lamb, Mr. H. V. Cobb, Colonel Ian Smith, Captain Gracey and Mr. Philip Graves.

At a Council held by the King at Buckingham Palace on November 5 those present included Sir George Russell Clerk (His Majesty's Ambassador Extraordinary and Plenipotentiary at Constantinople), and Sir Lancelot Sanderson (late Chief Justice of the High Court of Judicature, Calcutta), who were sworn in Members of His Majesty's Most Honourable Privy Council.

Sir Stephen Demetriadi gave a luncheon party on November 2 at 41, Hans Place, to meet the Maharaja of Burdwan. Among those present were Lord Hardinge of Penshurst, Lord Meston, Lord Southwark, the High Commissioner for India, Colonel the Hon. Stanley Jackson, Major the Hon. J. J. Astor, the Maharaja Kumar of Burdwan, Sir Campbell Rhodes, Sir Louis Kershaw, Sir James Martin, Sir Denison Ross, Sir Stanley Machin, Mr. D. T. Chadwick, Mr. T. McMorran, Mr. Dudley Myers, Mr. H. A. F. Lindsay, and Mr. H. K. C. Hare.

UNIVERSITY OF DUBLIN. TRINITY COLLEGE.

The Professorship of Arabic, Persian, and Hindustani is now Vacant. Applications, accompanied by a detailed statement of qualifications and copies of testimonials, must reach the undersigned on or before Tuesday, November 30. The duties, which consist mainly in lecturing Probationers for the Indian Civil Service, will begin on January 10, 1927.

The salary attached to the Chair is £250 per annum and the tenure is for seven years in the first instance, but the Professor will be eligible for re-election. Chambers in College will be provided.

G. WATERHOUSE,
Secretary to the University Council.

November 6, 1926.

ABYSSINIA AND THE HOLY PLACES.

VII.

By Alex Devine.

(Continued from page 521.)

Investigations of Baron Nolde.

The circumstances of the "Invention of the Holy Cross" may be gathered from the following narrative. In A.D. 306 Constantine became Emperor and was converted to Christianity six years later. After the Council of Nicaea had been held (A.D. 325) the Emperor commanded Bishop Macarius, Patriarch of Antioch, to recover the Holy Sepulchre. Macarius, believing that it lay beneath the Emperor Hadrian's Temple of Aphrodite, had the Temple removed, when a rock-cut Jewish tomb which lay below was identified as the Holy Sepulchre. In another cavity in the rock, 280 feet to the East, Constantine's mother, Helena, discovered three crosses, which were assumed to be those on which Our Lord and the two thieves were crucified, the Cross of Jesus being identified by its power of healing the sick and of remaining entire and unimpaired, though its substance was continually being diminished. Two churches were then built, one over the Holy Sepulchre, and the second, which was larger and grander, over the place where the crosses had been found. Between the two churches was a small hill, which was identified as Mount Golgotha. The ground surrounding the two churches was levelled and surrounded with colonnades. The Church of the Anastasis (or Holy Sepulchre) was a round church with a domed roof. The Church of the Martyrion (or Holy Cross) was a polygonal building, also possessing a domed roof. In 1010 the Fatimite Caliph Hakim destroyed the Church of the Holy Sepulchre; while from the beginning of the 8th century the Church of the Holy Cross seems to have ceased to exist. After the capture of Jerusalem by the Crusaders in 1099 a new and grander Church of the Holy Sepulchre was built on the ruins of the old, with the addition of a nave and chancel, and other churches were also erected in the vicinity; so that the Holy Sepulchre became the centre of a group of ecclesiastical buildings, which it has remained up to the present time.

To return to the 17th century evidence supporting the Abyssinian claims. In 1661 the following evidence is provided by Father Doubdon:—

> "Continuing on our way we went to the forecourt of the Holy Sepulchre to see the dwellings of the Abyssinians, who are the subjects of the Priest Jean, Primate of Ethiopia. This dwelling is on Mount Calvary, and quite near there is a fine olive tree having five or six branches quite green in the shape of a bush. According to Eastern tradition this is supposed to be the bush where Abraham found a sheep caught by its horns, which he immolated instead of his own son Isaac. The Abyssinians take great care in preserving this spot."

In the 17th century arose the first quarrels between the various religious communities at Jerusalem, wherein the Abyssinians greatly suffered. Two Firmans issued by Turkish Sultans (Mourad IV. in 1634 and Mustapha XI. in 1698) show that the Armenians were the chief offenders. Both Firmans mention the Abyssinians: Mustapha's contains an order to reestablish them in the possession of those properties in Jerusalem which the Armenians had tried to usurp. But from this point onwards until well into the 19th century the history of these disputes seems to have been unchronicled. At any rate no evidence relating to the position of Abyssinian affairs in the 18th century appears. In 1808, we learn, the Church of the Holy Sepulchre was partially consumed by fire; and then the Baron's judgment collects evidence confirmatory of the Abyssinian claims from travellers of the last and present centuries. Here is the evidence. In his work on "The Holy Places," Bishop Mislin says:—

> "Behind the ruins of these columns there is a moat, across which passes the road that leads to the Church of the Holy Sepulchre, through the underground Chapel of St. Helen, and goes as far as the Convent of the Abyssinians. Opposite the entrance to this Convent, on the Northern side, there is the door of a house that belongs to the Convent of the Copts, and through which one descends to the Cave called 'The Treasure of St. Helen.' . . . Behind the Church of the Holy Sepulchre, and above the underground Chapel of St. Helen, there is the Convent of the Abyssinians."

In "Palestine of To-day," Father Dominique Zannechia declares:—

> "A large staircase leads down to the Chapel of St. Helen, whose floor is seven metres lower than that of the Basilica. The Chapel has two apses and a dome with six windows looking on to the courtyard of the Convent of the Abyssinians."

The map of Sanley, appended to Father Leivin de Hamme's "Guide to the Sanctuaries and Historical Places of the Holy Land" shows clearly the situation of the Convent of the Abyssinians, as adjacent to the Chapel of St. Helen. Finally the latest scientific monograph on the Holy Places, F. V. Verdy du Vernois's work "The Question of the Holy Places" (Berlin, 1901) gives the following account of the Convent:—

> "The Abyssinian Convent is situated above the Chapel of St. Helen, standing out on the Eastern side of Mount Calvary. They have a special chapel, from which one gets to the Holy Sepulchre through a passage in front of the Church. The Chapel of St. Helen belonged to them; but they gave it up to the Armenians a long time ago."

In 1890 the Copts made another arbitrary attempt to encroach on the rights of the Abyssinians by beginning to demolish the wall of their Convent on the North side, in order to open a direct passage to their own neighbouring Convent. The Greek Patriarch, however, intervened, and an order went forth from the Turkish authorities to stop the work of demolition.

Evidence of the Patriarchs.

We now come to the replies sent by the various Patriarchs and Patriarchal Vicars to the Ethiopian Mission dispatched to Jerusalem by the Negus Menelik in 1905 and presided over by General Djedjay Match Hechacha. The questionnaire submitted to these ecclesiastics seems, strangely enough, to have been exclusively concerned with the right of the Abyssinians to the possession of the Convent of Dair-es-Sultan. The Greek Patriarch replied as follows:—

"I beg to inform you that the Abyssinian monks have lived in this Monastery from time immemorial. The Ilams issued after the disputes which took place from 1261 to 1264 between the Abyssinian monks and the Copts about an underground passage in the Monastery of St. Abraham, subject to our Patriarch, prove incontestably that the Doir-es-Sultan is one of the possessions of the Abyssinians. We know for certain that forty-two years before the Coptic monks somehow got hold of the key of the Doir, handing it over to a Coptic priest who lived with the Abyssinian priests; and ever since then the question of the ownership of the Monastery has been the cause of discord among the parties, with the result that lately the religious services in both Chapels have been discontinued."

September 7, 1321 (Greek Era).

On this question the Armenian Patriarch concurred with the Greek Patriarch; but he asserted that he did not know how the Copts got hold of the key. He dated his letter September 14, 1321 (Greek Era). The Syrian Patriarch of Jerusalem, Archbishop Elias, dating his letter September 14, 1905, made an almost identical reply. Monsignor G. El. Monalleur, Choreveque of Jerusalem and Maronite Vicar, writing on August 25, 1905, declared:—

"I . . . . certify that ,according to the documents found in our archives, the Convent called Doir-es-Sultan is the property of the Abyssinians. I have always known and heard it said that this Monastery belongs to them and has always been inhabited by them. I have even assisted in their religious services in both Chapels, which are in the passage that joins the Convent to the outer sanctuary of the Holy Sepulchre."

Father Joachim Tourmayon, Catholic Armenian Patriarchal Vicar, writing on the same date, gave similar testimony:—

"I testify that during the thirty-five years that I have been Patriarchal Vicar of Jerusalem I always saw the Abyssinian Convent Doir-es-Sultan inhabited by the Abyssinians; and like everybody else I am under the impression that it belongs to them. The Abyssinians have always celebrated their religious services in both Chapels, the one of St. Michael and the other of the Forty Martyrs, which are in the passage that leads from the Convent to the Holy Sepulchre."

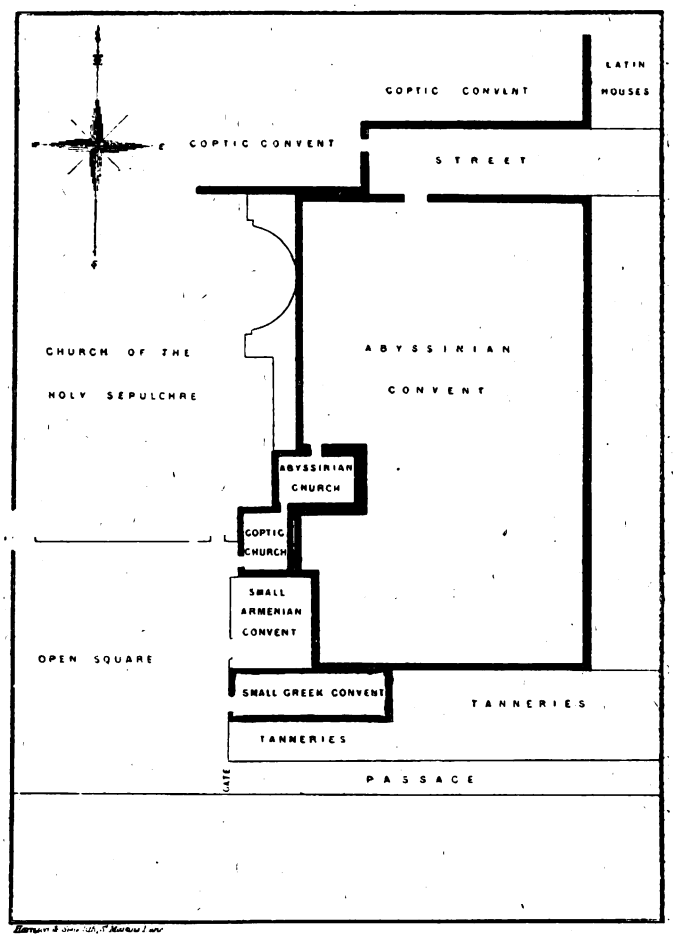
Finally Father Luigi Piccordi, Vicar Administrator of the Latin Patriarchate, replied in the following terms on October 10, 1905:—

"Having heard the evidence of the senior inhabitants among the Latin people in this city, I testify that the Convent of the Abyssinians (the subject of dispute between the latter and the Copts) has been since time immemorial used by the Abyssinians, and is therefore considered as their own property; for they always lived in it, and celebrated therein their religious services."

Of the six respondents no fewer than four then declared that the Abyssinians had occupied the Convent of Doir-es-Sultan "since time immemorial."

Abyssinian Negotiations with the Turks.

In 1907 and 1908 the Negus Menelik II. entered into direct negotiations with the Turkish Government in order to put an end to the encroachments to which his subjects had been victims at Jerusalem. A memorandum was presented to the Sublime Porte on the whole question. But the Turkish Government, after making inquiries at Jerusalem, returned an unsatisfactory reply. In a dispatch dated December 19, 1323/27—Zileode 1325 (Turkish Era) they admitted that for a certain period of time the Abyssinians had been in the possession of the key of the Convent of Doir-es-Sultan: but they insisted that since the year 1280, that is 1862 A.D., when a new lock was made and handed over to the Copts, the claims of the latter to the ownership of the Convent had been recognised. They also allowed that in 1890, the Copts had to be prevented by the local authorities from demolishing one of the walls of the convent and that in another violent dispute caused by the Copts preventing the Abyssinians from entering one of the Chapels of the Convent, the Copts stole the keys of both Chapels. But while admitting these facts the Turkish Government gave them an interpretation incompatible with the claims of the Negus. They declared that the provisions of the Firmans and the stipulations of the international treaties forbade them to modify the *status quo ante*. The Abyssinian representative replied to Teifilo Pasha in a new memorandum of protest dated March 15, 1908, in which he demanded that the keys of the two chapels should be returned to the Greek Patriarch, so that he might hand them over to the Abyssinians, who alone should have the right of celebrating services in these Chapels, which must not be used as a gangway by anybody.



Plan of the Holy Places, published in 1868 by H.M. Government to accompany the White Paper on "The Abyssinians at Jerusalem, 1850-1867."

The Real and the False Status Quo.

The question is: what exactly was the *status quo ante* which the Turkish Government invoked? Baron Nolde admits that such an idea must be the basis of the juridical discussion of such a subject as the rights of religious communities in the Holy Places; but he maintains that the *status quo*, which was sanctioned by Turkish Firmans, International Treaties, and "time immemorial" is the genuine *status quo*, and not the surprisingly retrograde decision of 1862. The Firman of Sultan Mahmoud II. (1808-1839), which aimed at a settlement of a dispute between Greeks and Armenians, expressly laid it down that in future no litigation must occur among the various Christian communities, each of which was to keep its own convents and possessions. Thus for the first time was laid down the principle that the condition of ownership of the Holy Places existing at that moment could not be disputed, and that any judicial question depended exclusively on the *status quo*. Moreover, the Firman in question explicitly mentions the Abyssinians and admits their right to ownership, at the moment of promulgation, in the following paragraph:—

Digitized by Google

"There exists a Church called "Carmana" ("Holy Sepulchre"), and another called "Bethlehem," supposed to be the birth-place of Jesus Christ. Such places remain the property of those to whom they have been allotted in far back ages, and according to a document dated the year 15 of the Hegira and signed by the Great Omar al Khattab, nobody can make opposition to the religious ceremonies, celebrated in their respective churches by the various communities (Georgians, Copts, Abyssinians, Syrians, Armenians, Jacobites, Maronites)."

The fundamental principle thus laid down in the Firman of Mahmoud II. was confirmed by that of Abdul Mejid (1839-1861):—

"The practice of religious and other ceremonies by the Christians who are in Syria and the surrounding country having been authorised by the Holy Law, I order that the above-mentioned Christians be in future reinstated in their immunities and privileges."

The Only Juridical Basis.

At the time of the well-known disputes between the Greeks and the Latin peoples about the Holy Places, which preceded and were in a degree responsible for the Crimean War, the *status quo*, confirmed by the Firman of Sultan Mahmoud II. in 1834 and by that of Abdul Mejid in 1841, was accepted by the Turks as well as by the French and Russians as the only juridical basis on which any legal decision could be founded. The first Firman obtained by French diplomacy on February 8, 1852, recognised the ancient right of the Latin races to practise their cult at the tomb of the Virgin Mary. It added at the same time that the rights of the Greeks were also confirmed; while lastly it declared that no change whatever would take place in the actual state of the Oratory on the Mount Olivet. Moreover in an explanatory letter to the Tsar Nicholas I. the Sultan explained that *the Firman was nothing else but the confirmation of the maintenance of the status quo for the Holy Places in question.*

A second Firman, which aimed at giving satisfaction to the Greeks and was issued in March, 1852, contained the following passage:—"The Latin races have no claim to the exclusive possession of either the Big Dome or the Small Dome, of the Stone of Anointing of Golgotha or of the Vaults, of the Great Church of Bethlehem or of the Holy Manger. *All these places must be left in their present state.*"

The Judgment of Baron Nolde.

To sum up, the following passage gives the considered judgment of Baron Nolde on the Abyssinian claims:—

"I think I have adduced sufficient proof that the ownership of the Convent Doir-es-Sultan on the part of the Abyssinians dates back to very ancient times, and is certainly anterior to the Firmans of 1834 and 1841. This ownership was absolute, and included the use of the Chapels adjoining the above-said Convent, and of course the possession of the various keys.

"In 1838, 1862, and 1890 the Copts repeatedly made arbitrary attempts to upset this *status quo*, to the detriment of the Abyssinians. Such infringements were illegal; and amend should be made by complete restitution. In spite of the fact that the Turkish Government has tolerated the violation of the *status quo* committed by the Copts, the rights of the Abyssinians remain nevertheless complete, incontestable and indefeasible.

"In conclusion, I am convinced that the Abyssinian Community in Palestine must be considered as the sole owners of the Convent Doir-es Sultan and its adjoining Chapels, and as entitled to the exclusive use of the doors and keys."

Paris, March 20, 1925.

This is the carefully reasoned opinion of a great jurisconsult. Let us hope that, fortified by so formidable a judgment, and acting in that spirit of friendship to a progressve neighbour which caused them a few months ago to make restitution of King Theodore's crown and to present to the Empress Zauditu, the Regent of Abyssinia, a splendid new throne, Mr. Baldwin as Prime Minister and Sir Austen Chamberlain, K.G., as Foreign Secretary, may be successful enough as Mandatories of Palestine in constituting such a Commission to investigate the various claims made in connexion with the Holy Places as will secure the approval of the Council of the League of Nations and vindicate the often challenged but still invincible claims of the Abyssinians.

(Concluded.)

THE ARAB HORSE SOCIETY.

A Council Meeting of the Arab Horse Society was held on October 27, at the Grosvenor Hotel, London, Brig.-Gen. F. F. Lance (President) being in the Chair. There were also present Mr. T. C. Armitage, Lt.-Col. T. R. Badger, Mr. H. V. M. Clark, Capt. T. A. Clarke, Messrs. C. W. Hough, Edward Hurtley, C. W. Laird, Major S. A. Medcalf, Capt. the Hon. G. Savile, and the Secretary, the Rev. D. B. Montefiore.

The following new members were elected:—Burrard, Col. H. G., c/o Lloyds Bank, Ltd., Cox and Kings Branch, 6, Pall Mall, London, S.W., Cloud, Arthur T., Downside, Edensor Road, Eastbourne, Sussex, Neale, D. E., Nant Fawr, Lisvane, Glamorgan, Steenwyk, Baroness de Vos van, Windesheim, Overyssel, Holland, and Stevens, Miss M. J., The Nunnery, Penryn, Cornwall.

Illustrations were accepted for volume III. of the Arab Horse Stud Book, shortly to be issued.

Six Classes were arranged for the London Show in March, 1927, the Classes and Cups to be the same as last year, with the addition of a Challenge Cup presented by Mrs. P. L. Cunliffe-Adamson for the best exhibit in the Arab-bred Classes.

The offer of a Class for the Arab young stock at the Bath and West Show, 1927, was duly accepted.

ROYAL GEOGRAPHICAL SOCIETY.

The new session of the Royal Geographical Society opened on November 8, when the American explorer, Mr. Roy Chapman Andrews, whose discoveries include dinosaur eggs and parts of the largest known land mammal, spoke on the work of the Central Asiatic Expedition in Mongolia. Among the subjects proposed for later meetings are "Unpublished Journeys of the late Miss Gertrude Bell," by the President, Dr. Hogarth; "A Recent Journey in the Yemen," by General Sir Gilbert Clayton; and "The Seven Churches of Asia," by Colonel J. H. M. Cornwall.

CURRENT TOPICS.

India and the Dominions.

The speeches at the luncheon given by the British Indian Union to some of the delegates to the Imperial Conference were characterised by some sterling good sense as well as by the compliments appropriate to the occasion, and we were struck in particular by Sir Atul Chatterjee's plea for continued effort on the part of both India and the Dominions towards a better mutual understanding, based necessarily on closer contact and more intimate knowledge. It is quite safe to say that the bad feelings which were so prominent a few years ago arose almost entirely out of ignorance and mistaken inferences from a few unfavourable specimens, and, if things are better now, as they certainly are, the reason is to be found mainly in a nearer approach to facts, as Indians have come to realise that "colonists," as they still sometimes say, are not all slave-drivers, while the Dominions are realising that Indians are not necessarily slaves. Imperial gatherings in London, and international meetings at Geneva or elsewhere, have undoubtedly had valuable results in this direction, Canada's recent invitation to a distinguished Indian to open the exhibition at Toronto has made a deep impression in India, and the tour of South African politicians, of which we have read so much in recent mails, will certainly operate to strength the improvement in relations which has happily begun. We are then on the right track, but there is still a long way to travel before we reach the goal indicated by the High Commissioner, when India and the Dominions shall be at home to each other in the informal way proper to members of the same family.

Hosts and Guests.

It is worth while then to glance at the difficulties which have to be surmounted before that goal is reached. In the first place, Indians are not naturally travellers, and the small number of wealthy or prominent men who have taken to this form of recreation as yet scarcely look beyond England, with perhaps a short stay in France or Switzerland. In the second place, there is the widespread idea, unfair perhaps, but not absolutely unfounded in the facts of the past, that Indians of position will not be welcomed everywhere in the Dominions. These difficulties concern the hosts rather than the guests, nothing that Indians can do will affect them materially, and they must wait for the invitation, couched in terms which will assure them of their welcome. It is with India as host rather than guest that we are immediately concerned: what can she do to attract the citizens of the Dominions, and give them such a pleasant time that they will want to come again, or else send their friends? The answer is unfortunately conditioned to some extent by distance. From Canada to India is a long journey, whether you start East or West. On the other hand, South Africa can visit India easily enough, while large numbers of Australians and New Zealanders, when they do not come Home by the Panama Canal, pass Colombo every week. Is there not room here for a profitable manifestation of the new spirit which in the last few years has descended on the Indian railway world, the spirit which is no longer contented with the traffic actually offering, but strives to bring new traffic into existence? Given a suitable organisation of tours, carried out in concert with the steamship lines, and, what is equally important, an adequate publicity service in Sydney and Melbourne, in Cape Town and Johannesburg, India could at any rate make a beginning in the still unfamiliar rôle of host, and, perhaps, make a little money in addition.

Railways as Educators.

It is quite certain that the new project of the travelling kinema car, with its supply of "free entertainment," is attracting considerable attention in India; and it may help in the prosperity at once of the railways and of agriculture. Audiences of 10,000 at these shows are, we are told, an ordinary occurrence, while on one occassion 30,000 people were actually brought together. Rural economists have long been urging such adult mass education of the countryside as seems to be promised by this new venture. It would, of course, be easy to gibe at it, and to ask whether the peasant is likely to be jolted out of his immemorial rut by pictures of an up-to-date poultry farm or cotton plantation, but the truth lies deeper than that. The fact is that the peasants are just beginning to feel the inconveniences of the old rut, and here and there a few of them are trying to get out of it for themselves. What is needed now is to help and stimulate them in every possible way, and there is no doubt that the "pictures" can have a stimulating effect, as the records of juvenile dilinquency unfortunately show. It will be a great achievement for India if the Railway Board can prove that, used wisely, the kinema can be a blessing to the country: hitherto, to put things quite mildly, it has not been that.

Trade Publicity.

It is very good news to hear that the High Commissioner for India has been given a grant that will enable him, during the current year, to employ an additional officer, with a suitable staff, to undertake publicity functions on behalf of the Indian Trade Commissioner. This was a need on which the Commissioner laid considerable stress in his report on the work of his office during the past two years, in particular with reference to the inability of India to participate in important Continental fairs such as those held annually at Brussels, Leipzig, Lyons and Milan. In a reference to his report a few weeks ago, attention was called to the fact that it disclosed a marked lack of trade improvement with the countries which are the special care of the Trade Commissioner—the United Kingdom and the Continent of Europe: and the inference was drawn that this was due to his inability to undertake the necessary publicity. It would appear that the authorities have been struck by the same idea; and that the present departure is intended as an experiment from which it is hoped that improvement will result. To judge

Digitized by Google

from the announcement, it is at present a very temporary one, for the publicity officer and his staff seem to have been sanctioned for one year only, which is too short a time in which to hope for striking results; but it may be confidently supposed that the authorities are alive to this fact, and that the experiment will be continued until experience shows whether its permanence will be justified. All past experience shows that expenditure of this kind is abundantly justified: and, if a reasonable amount of generosity is displayed in financing the present experiment, there is no reason to suppose that it will prove any exception to the rule.

Piece-goods Trade.

Cotton, in its issue of October 23, contains an important survey of the export trade of the United Kingdom in cotton piece-goods, in the course of which stress is necessarily laid on the position as regards India. The total export in 1913 was 7075 million yards and, in 1925, 4637 million: and, of this quantity, India took 3057 million yards in 1913 and 1336 million in 1925. A table is also given of the percentages of cotton piece-goods taken by the various importing countries; from which it appears that, in 1913, India's percentage of unbleached, bleached, printed, dyed and coloured goods was respectively 62.9, 38.3, 38.2, 24.8 and 12.4: and, in 1925, 45.9, 29.2, 23, 13.4 and 4. From these figures it appears that, while India's share of the total piece-goods export has decreased from 43.2 to 28.9 per cent, and while, in 1925, she took 57 per cent. of the quantity of bleached goods that she took in 1913, in all other pieces-goods she took only 39 per cent. of her 1913 yardage. India stood first of all the importing countries in 1913, except in the matter of coloured goods, where South America, South-East Asia and West Africa were ahead of her. In 1925 she had lost her pride of place in dyed goods to South America: and, in coloured goods, besides the three centres that were ahead of her in 1913, the following have also outstripped her in 1925—Balkans, Near and Middle East, Australia and New Zealand, North Africa, and Mexico, Central America and the West Indies.

INDIAN LETTER.

Bageshwar, U.P., October 18.

On the Road.

The motor roads to the Government centres in the "hills" of the United Provinces have restored to the bridle roads something of their old simplicity and charm, although the numbers of pack animals have increased enormously since the writer's pre-War tours, and cultivation and population are covering the hills and are obviously much more intense. Leopard and tiger have almost disappeared from these villages and the shikar has to go deep into the jungles to get his bag. The streams and lakes are full of mahseer of all sizes, but they have been so fished that it is quite an achievement to land anything more than a two-pounder where live bait is prohibited. It is all a tale of growing population and a growing sense of security, which encourages the agriculturist to break up jungle, a process which is visible everywhere. Conversations with ryots and coolies, and with planters and officials, all confirm one thing, that politics simply do not exist for the masses here. Their only obsession is food and how to get it; their one demand from Government is security. Charm, courtesy, cheerful smiling faces, are the rule in this happy country, and as the writer sits on a grassy terrace and looks across ten thousand square miles crowned with a fairy line of mighty Himalayas, faintly gleaming against the pale-blue horizon with their eternal jewelled whiteness, Calcutta with its cares and its political chaos seems merely a bad dream.

The Assam Council.

H.E. Sir John Kerr, Governor of Assam, was able to congratulate the members of the second Legislative Council in no uncertain terms when he addressed them at the close of their last session. He referred to the keen and healthy interest in public affairs which had been displayed by both the Councils which had sat since the Reform Scheme was instituted, and he considered that the record of work was one of which they had no need to be ashamed and for which the 1929 Commission would give them due credit. Education and technical institutions had been developed, water supplies improved, and the campaign against disease rigorously extended. In the case of kala-azar, a death rate of 90 per cent. had been converted into a recovery rate of the same percentage and at least 200,000 lives had been saved in the last five years. In general and financial administration the record was equally good and when political "walk-outs" and obstructive tactics had interfered with the course of business, they had been due to a policy imposed by outside organisations and had had no lasting effects. Sir John's term of office is nearing an end; and he might have followed distinguished precedent and claimed that so satisfactory a record was largely due to his presence on the *gadi*. He could have done so with justice and good reason; but his service record for efficiency, common sense and accessibility speaks for itself, and conditions to-day in Assam and its principal industry are eloquent in praise of his work as Governor. He has proved himself a brilliant member of a great service.

Lord Birkenhead's Speech.

The Secretary of State for India made an ingenious point when he indicated in his recent speech to the Indian National Council of the Y.M.C.A. in London what may eventually be a way out for the Swarajists. Political India is impregnated with the legal profession and the Indian mind has a peculiar liking for verbal subtleties; so when Lord Birkenhead suggested that co-operation with Government was a very different thing from co-operation with—and acceptance of—the Constitution, he made a point which might have originated in the fertile brain of C. R. Das; and if it had, it would have been hailed as an inspiration. The Swarajists are certainly looking for an opening to enable them to take a more practical line in politics, and they hardly trouble now to deny that they will accept office "on terms," if they are returned to power; it will not be surprising if they take the line indicated by the speech and decide to work the Constitution. They would then be able to allege that Government are not doing so, and in this way continue their past opposition on standard lines with what would be a new line of argument to help them. It is rather a pretty point.

Elections.

The campaigns proceed joyously, and this in spite of the Pujah holidays. Up to date these have gone off quite well and, thanks to adequate precautions, there has been no trouble. Two possible danger points occurred at the week-end, but the news to hand is that the authorities were fully prepared and no trouble was anticipated. It is a sorry thing that the communal question does not diminish in importance. The nomination papers have been duly scrutinised and the unopposed returns are known. Some twenty-three new members for elected seats are pledged to work the Reforms and these, with the official and nominated members, will be sufficient to provide a small working majority. It is almost certain that a few more members will be added to these and so, even if the Swarajists sweep the board, as it is generally anticipated they will, they will be far from having things entirely their own way. The Extremist has nothing to learn in the way of intimidation, although on this occasion he has not been able to seize the caste organisation and work it to his advantage; so-called canvassing, however, can be utilised effectively as a kind of what has come

Digitized by Google

to be known at home as peaceful picketing, and it is worked thoroughly here. A new tactical line is also being much exploited which is splitting the opposition; even in constituencies where no Swarajist appears support is being given to condidates who, although they oppose the Congress policy, are likely to be less dangerous than their rivals; if necessary, additional candidates are induced to stand so as to confuse issues still further. Finally, in policy, organisation and experience, the Swarajists are far ahead of everyone else.

Governors.

Lord Lytton has returned and looks very much the better for his trip home. He made a very good move when he accepted the invitation of some of the Communal leaders and drove in state around a long route through the Indian portion of the city on Friday last. This was an unprecedented incident in the Pujah celebrations, and it followed a strenuous week of work which the Governor had carried out in fulfilment of an undertaking that he would personally supervise the arrangements to prevent communal trouble during the Pujahs. The function went off extremely well and His Excellency was well received by all classes. He is entitled to unreserved congratulations for substituting strenuous work for what has always been hitherto regarded as the holiday time of the year to be spent in Darjeeling. Official news is now to hand of the appointment of Lt.-Col. the Rt. Hon F. S. Jackson to succeed Lord Lytton; a review of Indian comment will follow later, but it is needless to say that his own countrymen will give a great welcome to a fine sportsman and a tried leader of men.

Men and Things.

The *Englishman* has a leading article upon the work of Sir John Kerr as Governor of Assam, in which it comments on his suavity of manner and his sympathy and straightforward frankness. It also specially mentions the Chief Secretary of Assam, Mr. A. H. W. Bentinck, I.C.S., who has recently been appointed and is a conspicuous success. The change in the administrative aspect of Assam in the last five years is nothing less than astonishing, and a closing balance on the right side of 47 lakhs speaks for itself. Everyone concerned is entitled to congratulations.

Probably the shipping activities of Henry the Ninth, yclept Ford, are not news at your end, but the arrival of the first cargo vessel of the Ford fleet at Colombo has served to make some paragraphs here. Tiled bathrooms for the crew, telephones everywhere and even the cabin boy getting more than a junior P. and O. officer may yet make an Inchcape rock.

The South African Deputation is eating its way through India and in revenge India is to send its own deputation to South Africa this winter. If they are going to be paid back in kind, they ought to be a weighty body when they return.

The *Statesman* appears to be impressed by the success of Mr. George Pilcher, erstwhile of its Calcutta staff, as a British M.P., for amongst the unopposed returns for the new Councils are Mr. Arthur Moore in the Central Assembly and Mr. W. C. Wordsworth in the Bengal Council. Both are on its editorial staff, and the latter was formerly Director of Education in the Bengal Secretariat.

The Calcutta Improvement Trust has published its annual report which is a record of steady progress and a satisfactory increase of both income and balances. It seems to be almost a habit with them to keep within their estimates, which must make Bombay rather envious.

The senior warrant officer at Fort William, Sergt.-Major Johnstone, died suddenly this week, to the regret of all who knew him as a soldier or sportsman. He was formerly in the Camerons, and in the latter part of the War was of the greatest assistance to everyone who had to serve on or work with the Brigade here. Much sympathy is felt for his widow and children, who are at home on leave.

An interesting literary find is reported from Karachi. Whilst excavating for the foundations of a new Government building in the valley of Scinde, a brass case was discovered which, on being opened, was found to contain a manuscript inscribed with a new set of Rubaiyats of Omar Khayyam. Translations are being made and in due course the results will no doubt be published.

The Bishop of Calcutta, addressing the Rotary Club upon the Indian Church Measure, met the admitted objections from what he called "individual Europeans" by saying that although changes in the liturgy were theoretically possible under the Measure, in practice no proposal affecting fundamentals had any chance of being carried. In such circumstances many were left wondering what is the point of creating a Church of India.

The Trivial Round.

The last day of the Monsoon Meeting only attracted small fields but there were a number of close finishes and on the whole it was an enjoyable afternoon. The end of the "off" season shows a good percentage of amateur owners with a showing and the promise is for a good cold weather series when Calcutta fills up again.

Calcutta duly pulled off the final at Madras and so won not only the Madras Cup (and this for the first time) but also the new "pot" which has been sent out by the English and Scottish Unions for Inter-Provincial competition. Ceylon, Bombay, Madras and Calcutta were in the semi-finals and it was the tightest of things all round; Calcutta, heavily down in the first half, made a great rally to beat Ceylon, and then won against Madras in the final by the only try the game produced. By all accounts it was a wonderful week.

The Rowing Club has held its annual regatta and its growing strength is shown by the sending of a strong crew to Rangoon this Pujah. When the Club gets to its new quarters on the Improvement Trust Lake it should take its old place in the Ditchers' affections.

The Swimming Club have also sent a team to the Rangoon Regatta, so that Calcutta will have been well represented in "out-stations" this year.

The Theatre has had the "Our Cabaret" show again for a week, following which we are to hear the Roman Singers again; then the A.D.C. under Mrs. "Pat" Deane will revive their brilliant "Dover Road" production to lead us to the cold weather.

INDIAN MAIL.

Railway Window-Dressing.

The speech of Sir Clement Hindley, the Chief Commissioner of Railways in India, at the meeting of the Railway Conference, contained a reference to what he called the illusion that it was time for railwaymen to have earned a little repose after the great results that they have recently achieved. If anyone thought that the Conference had come to the end of its big problems, he was mistaken: there is no end to these problems, and railwaymen did not wish that there should be one. He added that the time had now arrived when they could do a certain amount of window-dressing—could "put their shop-windows in proper order and show to the public that they have something to offer that it is worth while to pay for."

One may suppose that the announcement of "the new era of luxury travel," that is to be inaugurated this month by the running of two new overland mail trains between Bombay and Calcutta, is one of the first efforts at window-dressing. The mail papers contain a detailed account of the splendours of these two "magnificent trains with their handsome colour design of royal blue and gold, which will undoubtedly attract admiring attention during their passage across India": but, while an effort is thus being made to add to the comfort and convenience of passengers leaving or arriving by the mail

Digitized by Google

steamers, it would seem that the much more important interests of the merchants of Calcutta are receiving less consideration. Before the War, the time taken in the transit of the English mail from Bombay to Calcutta was 39 hours; and since the War it has been a little over 41 hours. It is now announced that, for the future, it will be 42 hours. In addition, the postal authorities declare that the sorting of correspondence, which has until lately always been done on the mail train, cannot now be fully done on it and will have to be completed after its arrival at Calcutta; and the reason given for this is, that the railway authorities decline to increase the weight of the special train by attaching an additional mail van, without which the sorting cannot be completed on the train.

The Bengal Chamber of Commerce have entered a formal protest against both these innovations: urging that the necessary sorting accommodation should be provided, if necessary by running a mail special carrying no passengers: and that the mail service should not in any circumstances be slowed down. This is not one of the big railway problems to which the Chief Commissioner referred in his speech, it is true; but it is, nevertheless, a very important one. Let him dress his window in royal blue and gold, by all means; but let him not forget the much greater importance of keeping the best and most up-to-date stock, such as will bring the largest and quickest turn-over, in the shop behind the window.

Agriculture and the Kinema.

In the course of the opening sitting of the Royal Commission on Indian Agriculture Dr. Clouston, Agricultural Adviser to the Government of India, expressed the opinion that the Indian cultivator is not unduly cautious or over-conservative, but is quite ready to accept innovations, to the extent to which he is able to afford them, once he is convinced of their efficacy. The Chairman suggested that kinema films afford a wonderful opportunity of bringing home to the rural population the usefulness of improved methods; but agreed that villagers who had never seen a photograph or a film, would not understand what it was that was being shown. If, however, the kinema is going to prove one of the most important engines of propaganda, why should it not be tried? Dr. Clouston replied "The Government will not sanction funds for such purposes, so we are leaving it to the Railways, who are organising their own kinema films."

Reference has been made elsewhere in these notes to the Railway programme of "window-dressing"; and if, as Dr. Clouston's answer seems to suggest, this particular form of it is something more than an advertisement of their own wares, the railways are to be specially congratulated. Agricultural prosperity is, of course, the basis of all prosperity in India, including that of the railways; and it would seem that the latter have so far recognised this fact as to set aside a section of the "travel films" to be devoted to the education of the Indian peasant. So far as it goes, this is a great advance; but one cannot help thinking that it could be done even better by experts; and one may hope that the Commission will prevail upon the Government of India to allow them the money necessary for a trial.

The average Indian villager is very slow to recognise the subject of a photograph, though he readily identifies the crude and gaudy pictures of gods, goddesses and "heraldic" animals, which are the only form of art that he usually comes across. One remembers the instance of the photograph of a small girl who had lately gone to England, but who had, in her Indian home, been a special friend of the *mali* (gardener). Shortly after her arrival at home, a photograph was sent out to her parents: in which she was wearing a white flounced frock of the Victorian pattern: and her mother took it and showed it to the *mali*. He expressed delight at seeing it, and said it was truly beautiful: and the mother was quite pleased until she noticed that he was holding it upside down: so she asked if he recognised it. "Of course I do," he replied, "how could it be otherwise?" "Then what is it?" "How can you ask—of course I knew at once what it was." "Then tell me—what is it?" The *mali* looked doubtfully at her and said "*Shayad phul-gobi hoga*"—"perhaps it may be a cauliflower."

The Public Services Commission.

The Public Services Commission started work on October 1. The President has been in India for three months, during which time he is stated to have been "busy organising the new office and doing a great deal of spade work"; and the members have now joined him. It is just six years since the necessity for the Commission was laid down by the authors of the reformed constitution: and, as the Anglo-Indian newspapers say, its functions (and, it may be added, its composition) as eventually drawn up, though they roused no enthusiasm in service circles, were accepted as a fair beginning on the right lines: since "it holds out hopes of the redress of service grievances and the establishment of a standard of recruitment for the various services under its charge as will go to keep up their efficiency; but much will depend upon the tradition that the Commission will build up, the confidence it will inspire in its impartiality, and the standard of recruitment."

The *Englishman* says that an experiment big with possibilities has been set on foot, whose progress will be watched by the country, and by the services in particular, with considerable interest and concern. And so say all of us.

NOTES AND NEWS.

170, Strand, London, W.C.2,
London, Tuesday Morning.

Roumanian Oil Agreement.

Satisfaction will be general at the news that an agreement has been arrived at between the Roumanian Government and the British oil interests concerned in respect of the payment of compensation for damage and destruction to properties at the close of 1916. By the agreement Roumania undertakes to pay forty annuities commencing at 2 per cent. for the first five years, then increasing to 3½ per cent. for the following five years, and to 4½ per cent. for the remaining thirty years. The payments will be made half-yearly, and the first two such payments will be made on December 1 next. The capital on which the annuities will be calculated is the sum given in the list of the Thring-Wenger-Mrazah Commission less what the companies have already received from the Roumanian Government and from ex-enemies. It is provided that these annuities shall be free from all Roumanian duties and taxes present or to come.

Importance for Phœnix Company.

For the Phœnix Oil and Transport Company the agreement is, of course, of great importance. A circular issued by the Company states that the total amount awarded to the companies comprising the Phœnix group is £1,467,413, and the instalments with the interest will amount to £2,304,446, this amount representing considerably more than half the company's capital. It is scarcely necessary to emphasise the steady progress that the company has been making in recent years. The latest monthly production report, which will be found on another page, gives a yield of over 33,401 tons, and the maintenance of this figure for a full year means an output of about 400,000 tons. For some time now the monthly figures have spoken eloquently of developments, and it is not surprising that of late the ordinary shares should have shown considerable strength. It is held that even now the oilfields of Roumania are only on the fringe of their development, and if that be so it is certain that no company is better circumstanced to play its part in their exploitation than the Phœnix Oil and Transport Company.

A Notable Feature.

Before leaving the subject of the agreement it is necessary to emphasise its importance in its wider aspects both for Roumania herself and for the Near East as a whole. It is a gesture the significance of which will not escape attention in financial circles. Roumania has made an honourable settlement of her obligations, and thereby at a stroke has vastly enhanced her credit. I have had occasion to point out in connexion with other countries that it would be hopeless to attempt to approach the London market for a loan while they failed to settle their existing liabilities. Roumania's action in the present instance will be borne in mind, and when the time comes that a loan is desired she will find that the path of negotiatons will be much smoothed by the knowledge that a country is being dealt with that will honour its signature to the full. But as I have indicated, not Roumania alone but the Near East as a whole, will benefit in reputation by the agreement. I am only too well aware that as a result of a few unfortunate business transactions one or two Near Eastern countries are in anything but good repute in business circles here. These transactions may have been the exception, but their influence has been lasting, and it required some gesture such as that forthcoming from Roumania to redress the balance and to give to the Near East a renewed prestige for financial morality.

Banking in Egypt.

The announcement is forthcoming that arrangements have been made for the transfer to the National Bank of Egypt (as from December 1 next) of the banking business in Egypt carried on by Lloyds Bank since 1923, and previously by Messrs. Cox and Co., at Alexandria and Cairo, with agencies at Benha, Beni Suef, Fayoum, Mansourah, Mehalla Kebir, Minieh, and Tanta Zagazig.

Anglo-Persian Progress.

It is a pleasant task for a chairman to have the duty that has invariably fallen to Sir Charles Greenway at the meetings of the Anglo-Persian Oil Company of describing a year of further substantial progress. His speech at the general meeting last week was specially notable not only because the company's prosperity had been greatly enlarged in the past year, but also because it is the last speech that he will make as Chairman of the Company. He has seen the company develop to its present sound and healthy condition, and he feels that the time is now opportune for a change, a decision which will be deeply regretted, but the regret will be tempered by satisfaction that he will still be associated with the Company in the new office of President, which is being established. Sir Charles Greenway dealing with the report and balance-sheet justly asserted that they fully justified the conservative policy followed ever since the Company came into existence. As to the immediate outlook he said that subject to there being no radical change in the prices of petroleum products between now and the end of the Company's financial year there would be a continuance of the augmentation of profits which had been shown in recent years. What he had to say with regard to the Company's main fields was most encouraging. Numerous wells drilled in during the year have not only materially advanced the proved area into new ground but have further demonstrated the remarkable richness of these fields. To the main line of the productive area in the Maidan-i-Naptun, Maidan-i-Naftek and Maidan-i-Bibian fields further drilling has added another large area of proved territory, bringing the total area so far proved up to about 30 square miles. On this field, it was further stated, the marginal test drilling has recently revealed an important bifurcation of the main anticline to the the north-west. It was too early, Sir Charles Greenway added, to indulge

Digitized by Google

in prophecy as to the commercial significance of this discovery, but their geologists were optimistic.

The Naft Khana Area.

The production from the main fields during the year was 4,556,157 tons as compared with 4,333,933 tons. Sir Charles Greenway stated that the current year like the last would be partly one of stabilisation and partly one of preparation throughout all the organisations complementary to the fields proper for larger production in the future, and it was not their intention to draw on their underground store of oil to the extent of more than about 4¾ million tons. Testing operations, he added, are well advanced in the six new areas referred to at the last meeting. In the Naft Khana area six wells are now drilling. Reference has previously been made to the drilling of a well with an initial capacity of 1,000 barrels, and during the year another well nearly one mile away from the first one came in with an estimated daily rate well in excess of 5,000 barrels. At the present time the wells driling in this field extend over a length of 5½ miles, with the object of determining, said Sir Charles Greenway, whether the oil deposits in this region are extensive enough to justify the greater expenditure entailed in the construction of a pipeline to the seaboard. Meantime a small refinery is being constructed in the transferred territories with a view to supplying the markets of Iraq and North Persia.

Turkey's Budget Estimates.

The feature which strikes one most about Turkey's Budget estimates for 1927 is the excessive proportion of the expenditure allocated to armaments. Out of a total estimated expenditure of £T188,141,708 something like 45 per cent. is devoted to the armed forces. No one can, of course, question Turkey's right to do absolutely as she likes in this respect, but the critic cannot fail to be struck by two aspects of the case. In the first place it can scarcely be maintained that the situation in the Near East at the present time is such as to necessitate extensive military precautions. In the second place while Turkey is lavish in one way she has still to fulfil her obligations in regard to her external debt. The effect of Turkey's attitude to the bondholders has naturally affected the country detrimentally abroad, and while the view is evidently held in some Turkish quarters that it is possible for Turkey to do without foreign assistance, it is difficult to see on what grounds it is based. Indeed, it seems certain that sooner or later she will require financial aid, but if that is to be forthcoming it is essential that her policy should undergo a marked change.

Greek Currants.

My attention is drawn to an error in a paragraph on Greek currants which appeared in our issue of October 14. I mentioned that the Currant Administration will purchase any surplus that there may be at the end of the season at the price of £3 13s. plus 1,000 drachmæ per ton. Actually it should have been per 1,000 lb.

COMMENTATOR.

The traffic receipts of the South India Railway Company for the week ended September 30 amounted to Rs.18,45,977, making the total from April 1 Rs.2,62,94,069. For the corresponding periods of 1925 the totals were Rs.18,98,265 and Rs.2,69,33,913.

NEWS FROM ALL SOURCES.

The gross production of crude oil of the Phœnix group of companies for October was 33,401 tons.

An 18.50 h.p. Crossley six-cylinder touring car has been purchased for the use of the Viceroy of India.

The quantity of gold extracted from the mines in India during August amounted to 32,240 ounces, valued at Rs.18,21,647.

The protocol for the delimitation of the Greco-Turkish frontier, as laid down by the International Commission, was signed in Athens on November 5.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended September 20 amounted to £E8,350, making the total from April 1 £E142,095.

The production of the Indo-Burma Oilfields for September was 2,031 barrels, being 1,291 barrels from Yenanma field and 840 barrels from Padaukpin field.

The production of the Dacia Romano-Petroleum Syndicate for October was 2.156 tons; 11 wells were in production, 12 wells are in drilling and 2 are being filled up.

On November 3 the various branches of the National Bank of Greece began making payment to refugees entitled to compensation for their property abandoned in Turkey.

The traffic receipts of the Suez Canal Company from October 23 to 29 amounted to 4,180,000 francs as against 3,560,000 francs for the corresponding period of the previous year.

Short Brothers, of Sunderland, have received an order for a vessel from a Greek firm. The triple-screw expansion engines will be supplied by John Dickinson and Sons, Sunderland.

Contracts have been placed by the North-Western Indian State Railways for nine bogie platform waggons with the Gloucester Railway Carriage and Waggon Company, Gloucester, and for twelve high-sided bogie waggons with Stableford and Co., Coalville, Leicester.

A measure has been framed with regard to the cultivation of tobacco in Bulgaria, by virtue of which this crop will not henceforward be permitted except in those districts where the land and the climate permit the production of tobacco of the very best quality.

Steaua Romana (British), Limited, are advised that the production of the Steaua Romana Company, Bucharest, for the month of October was 47,090 tons. This is the highest monthly production obtained since before the War.

A Reuter message from Sofia dated November 5 states that the Chamber to-day passed the Bill for the reorganisation of the National Bank of Bulgaria in conformity with the scheme for the settlement of Bulgarian refugees, which was signed at Geneva.

NEW COMPANY.

NEAR EAST PETROLEUM.

The Near East Petroleum Company has been registered as a public company with a capital of £150,000 in £1 shares, to acquire claims, concessions, or other interests in lands containing, or believed to contain, petroleum, oil, gases or oleaginous substances or deposits, and to carry on the business of prospectors, etc.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, October 26.

The General Situation.

On Sunday last, in the course of the electoral campaign for the renewal of the General Councils, the elections for which take place on November 14, the President of the Council, M. Liaptcheff, gave an important speech in which, in examining the situation of Bulgaria in all its aspects, he was led to speak of the Bulgarian effort in the various domains of national activity.

The financial and economic situation of the country drew most attention from the President of the Council. It was not rosy, he said, but even difficult, since the obligations of the State were excessive, and the disposable economic forces did not correspond to the needs of the population. Despite that M. Liaptcheff added, he was drawn to believe that they constituted an oasis in the middle of Europe. They had, it was true, many wounds to heal, but they had also the possibility of relieving them quickly—admittedly on certain conditions. The Budget, mirror of the economic life of the State, had very serious defects; and moreover, that Budget, after having satisfied the pressing needs of the country, had also to provide for works the result of which would not be felt by the present generation, but by the generations to come, and the execution of which called for special resources, ordinarily provided by means of public loans. In fact, if there was one dangerous feature in the Budget it was the fact that they sought with the sole resources of the ordinary fiscal revenues to construct roads, railways, and great public buildings, which could not be said to be in the proper order of things, and at the same time to meet all their obligations. These latter were of two kinds. In the first place they had obligations to those who had lent them money in the certainty that that money would be progressively repaid with interest in addition. These were their loans. They repaid the foreign holders of shares in those loans in a superior currency to the lev which was the money in which Bulgarian holders were repaid. That was an incontestable injustice towards their nationals, but they had voluntarily accepted that injustice because they wished to show the world that their country was ready to meet all sacrifices to sustain its credit abroad. They had in the second place a whole series of other obligations which had been imposed upon them in consequence of the War; reparations, the expenses of the occupation, restitutions, processes of all kinds which drained what remained of the forces in their economic life for the development of their country. These second obligations constituted without doubt a heavy charge, menacing the economic and financial equilibrium of Bulgaria. It might be said "You are very well off since you pay, and very few in number are the States to-day who can boast of paying their debts." That was true, but was it realised at what a price it was done, and how many real needs of the country remained unsatisfied precisely on account of those payments? There were limits to every effort.

They had a surplus of gold to take care of their refugees, those unhappy compatriots whom events and the treaties had forced to flow into Bulgaria, and who constituted a burden for the State, for the communes and for the individual citizens. They owed the most deep recognition to those who had come to their aid in the establishment of the refugees. They disposed to-day for that purpose of an advance on the special loan which would be raised in the course of the approaching weeks. That loan, important because of the resources it would procure for them, had opened the eyes of those who were interested in their economic life and in their state of material prosperity. In order to be able to ask in good faith capitalists to give money by means of this loan, in order to be able to guarantee future investors in Bulgaria, they have after a profound investigation arrived at the following conclusion: it was necessary not only to restore to Bulgaria the liberty of pledging any of her revenues already allocated to the service of reparations, but also to place her in such a position that if a moment arrived when she was unable to find sufficient exchange to meet her obligations abroad and was in sight of the necessity of having recourse to the reserves of the National Bank, which would mean the disturbance and disruption of the exchange, her payments should be postponed or reduced in part or wholly. Thus the way to a solution had been found of the most difficult question that existed for the Bulgarian State at present. He was unable to conceal the fact that neither the public Budget with all its resources, nor the Bulgarian taxpayer with all his efforts were they to be superhuman, nor the extensive trade of Bulgaria with all the zeal shown in extending it to the last degree, would be able to safeguard the relatively colossal payments which awaited them in the years to come. They would find themselves then compelled to appeal to the institution which far-seeing men who had so powerfully aided them in obtaining the loan destined for the establishment of the refugees, had set up, that was to the Commission which would be presided over by a person appointed by the International Tribuanl of The Hague and would have as members a delegate of the holders of Bulgarian pre-War loans and a delegate of the Reparations Commission.

That Bulgaria would not be further able, at this time, to meet her obligations, was evident, said the President of the Council; that she ought, independently of that, to be helped in her interior and economic development, which she would be unable to see to with the resources of the ordinary Budget, was equally obvious. Then what did they expect? He did not lose hope, and what he saw in the world gave him the conviction that the general state of the world would improve without ceasing, and that debarred pessimism. Conforming their desires to reality, they would continue their efforts, despite all the hardship that it entailed, and they were certain that the relief of their difficult position would not be long delayed.

That effort was shown not less strongly in the political domain—that of the interior policy and that of the exterior. And M. Liaptcheff proceeded to devote a little attention to this aspect, pointing out on the one hand that the country was moving towards appeasement; and emphasising, on the other hand, that the line of conduct followed by the Government in foreign questions had been approved by the whole Opposition, despite the difficulties inherent in it and despite the collective notes of the neighbours of Bulgaria. It was a mercy for the Bulgarian people that her foreign policy at present encountered no hostility. It was a policy of peace and of collaboration with all foreign countries in the cause of peace. It had already given satisfactory results; it would give more still in the future.

Above all Bulgaria had given proof of a courageous effort—sometimes a very painful one—which ought to leave no doubt of her good will, and which gave her the right to expect from Europe a more just appreciation of the position.

A Forest Concession.

As I indicated in my letter of September 10, the adjudication for the concesstion of the exploitation of the large forests of oaks and beeches situated in the districts of Malko-Tirnovo and Vassiliko took place on October 15. These forests, although perhaps smaller in extent, are more important than those of Deuvlen, because they are nearer the sea and consequently more easy to exploit. The concession has been granted to the same company (Bulgarische Forstindustrie) that obtained the concession of the forests of Deuvlen, and which, as is well known, works with Austrian, German, and British capital.

NEWS FROM BULGARIA.

A Good Tobacco Crop.

The following extracts are taken from the report of the Bulgarska Banka:—

On the whole the tobacco crop is reported to be good, and it appears to be of better quality than that of last year. The gathering, already finished in Macedonia, is very advanced in all the rest of the country. If the good weather continues the top leaves, much the best, which are being picked at present, will dry in very good condition, thus increasing the quality of the crop, which would then become one of the best. As regards quantity the crop will be distinctly inferior to that of last year, and will not exceed 25,000,000 kilos.

The sugar beet harvest has just terminated. It is reported that it will be sufficient for the manufacture this year in Bulgaria of a quantity of sugar sufficient to meet the entire consumption of the country.

At the state mine of Pernik the production of coal in August totalled 92,000 tons, of which 90,000 tons have been sold. Active preparations are being made for the winter season. It is noteworthy that many Bulgarian villages, served by the railway lines, are now beginning to buy coal to serve their needs.

During the first four months of this year the exports of tobacco totalled 10,874,800 kilos as compared with 13,956,670 kilos in the corresponding months of 1925, or a decrease of more than three million kilos. For the months of May, June and July the totals are 5.2 million kilos in 1926 against 9.3 million kilos in 1925.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the fortnight ended October 30:—

The arrivals of sultanas are estimated at 26,000 tons, and the sales to date are put at 25,030 tons. Closing Smyrna prices, per cwt. c.i.f. London/Liverpool:—Type 12, 56s.; type 13, 58s.; type 14, 60s.; type 15, 62s.; type 16, 64s.; type 17, 67s.

The position is extremely firm owing to the revival in Continental demand. Over 8,000 tons have been sold during the month at steadily advancing rates, but higher foreign exchanges have to some extent counteracted the advance in local currency. Stocks now remaining available for export are estimated at barely 5,500 tons. Very limited supplies are coming in from the country, farmers holding out for prices well above Smyrna parities.

The arrivals of figs are estimated at 25,341 tons, and the sales to date are put at 25,310 tons. All good sound qualities are exhausted in first hands both here and in the interior. The small stocks remaining are made up exclusively of inferior qualities and pickings of Hordas.

EMPIRE MARKETING POSTERS.

On November 2 the Prime Minister opened an exhibition of original posters, designed for the Empire Marketing Board, at the Royal Academy, Burlington House. These posters, done by artists of such eminence as Norman Wilkinson, George Sheringham, E. McKnight Kauffer, and so on, are a remarkable endeavour to combine artistic, educative, and commercial values. They will shortly be seen on public hoardings, railway stations, and so on, in an attempt to bring home to the British people at once the realities and the romance of the commercial geography of the Empire.

Posters that are likely to be of particular interest to readers of THE NEAR EAST AND INDIA are two magnificent lithographs by Spencer Pryse,—"An Indian Rice Field" and "Tea-picking in Ceylon"; "The Suez Canal," by Charles Pears, showing the ceaseless flow of vessels up the Canal (it was a clever idea to put, as contrast, camels slowly winding their way on the canal banks); and "Ships in the Channel," by Norman Wilkinson, worthily bearing Kipling's famous lines on such ships as links of the Empire. In fine, it is a refreshing show, which undoubtedly should do something to stir the occasionally sluggish imagination of the English people towards the potentialities of the Dominions overseas.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, November 22). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.— S.s. Masirah for Port Said, Colombo, Madras, and Calcutta (London, November 13).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (Birkenhead, November 18).

British India Line.—S.s. Domala for Colombo, Madras, and Calcutta (November 20); s.s. Hatkhola for Bombay and Karachi (London, November 20).

Cunard Line.—S.s. Tyria for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also Corfu, Gruz, and Ancona if inducement (Liverpool December 11, Swansea December 14); s.s. Pavia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Liverpool, Glasgow, and Swansea, December 11).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 1).

P. and O. Line.—S.s. Ranpura for Bombay (London, December 3); s.s. Nankin for Colombo, Madras, and Calcutta (London, December 11).

Prince Line.—S.s. Sicilian Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (Manchester, November 15); s.s. Lancastrian Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (Manchester, November 29).

Ellerman and Papayanni Lines.—S.s. Polo for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool November 20, Swansea November 24); s.s. Andalusian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, November 20); s.s. Mardinian for Algiers*, Malta, Syra, Smyrna, Constantinople (Liverpool, December 1. * Subject to sufficient inducement. Transhipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

Major-General Beresford Lovett, C.B., C.S.I., late R.E., of Hillside, Harvey Road, Guildford, who saw service on the North-West Frontier of India and in Persia, and who died on September 4, aged 87, left estate of the gross value of £2,137, with net personality £2,073.

Mr. Arthur H. Smith, president of the Society for the Promotion of Hellenic Studies, will deliver a lecture, illustrated by lantern slides, at the Royal Institute of British Architects on December 6, at eight p.m., on "The Building Inscriptions of the Acropolis of Athens." Further details may be obtained from the Secretary, R.I.B.A., 9, Conduit Street, W.1.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 9.

Dealings in the new Belgian Loan and the publication of the terms of the great chemical fusion, both of which subjects are discussed below, have been the two events of outstanding interest in the investment world. Apart from these, the week has been rather uneventful. The continuation of deadlock in the coal dispute is giving rise to much talk of an increase in the income-tax next year, and some increased inquiries for tax-free securities is reported for this reason. But, although such an unfortunate Budget necessity cannot be ruled out, the financial year is as yet too young to enable any prediction to be made with any confidence regarding the outcome of the present Budget or the problems of the next year.

One prominent section of the investment markets has been the rubber section, where a substantial fall (in sympathy with the price movement of the raw commodity) was only partially recovered at the end of the week. If similar depressions recur in the near future as they may, there is no reason at all for holders of shares in good companies to be in any way disturbed. The outlook for the next twelve months is at least a prosperous one; and after that the prophecy of another boom may or may not be justified.

"Stags" and the Belgian Loan.

The flotation of the Belgian Stabilisation Loan and the subsequent course of the market in the scrip, raises points which are of considerable interest to the investor. The terms were particularly attractive and it seemed almost a foregone conclusion that as soon as dealings started the price would go to a substantial premium. This actually happened, but it is poor comfort for the genuine investor who may have applied for the loan and received no allotment. Many thousands of applicants were disappointed in this way, those who applied for less than £1,000 receiving no allotment, while probably a still larger number were able to make no application at all owing to the short space of time which elapsed between the issue of the prospectus and the closing of the lists. It is reported that the issue was applied for 40 times over and one of the reasons for this is undoubtedly the small amount payable on application, namely £5 per cent. which afforded an excellent opportunity for the "stags" or premium hunters. An application for £50,000 of the loan required only an initial payment of £2,500, and it is stated that in more than one case the whole amount of the loan was applied for in a single application, and while, as a result subscribers for large amounts received only about 1½ per cent. of the amount applied for, the genuine applicant for a small amount received nothing at all and if he still wishes to obtain a holding of the loan is now obliged to pay a substantial premium. The obvious remedy in attractive issues of this kind is to make the amount payable on application much larger—say 25 per cent.—and to make the balance payable on allotment. This would give the genuine investor a reasonable opportunity which is now denied him owing to the activities of "stags." A further suggested improvement is that prospectuses of this kind should be issued 24 hours before the opening of the lists. This would give the country investor an equal chance with London.

The Amalgamation Tendency.

There are not wanting signs that in the near future the investor will be called upon to consider an increasing number of amalgamation proposals. During the past week or two the chemical combine has come into being, and thus amalgamates four of the most important chemical manufacturing firms. During the past week, at the meeting of the Denaby and Cadeby Main Collieries, Ltd., the chairman announced that a scheme of amalgamation would shortly be put before the shareholders. Indeed, it would seem that investors in colliery undertakings are likely to be chiefly interested in such developments, for several important colliery amalgamations are said to be under discussion.

It will be recalled that the Royal Commission on the Coal Industry recommended amalgamation. Doubtless any movement designed to improve earnings will have the cordial co-operation of shareholders, for during recent years their lot has been a by no means enviable one. The chairman of the Denaby and Cadeby Company has no doubts regarding the advantage of amalgamation, as he contends that by combination they would be able to obtain finance more easily and more cheaply, since lenders would have a better security: that it would result in a saving of overhead expenses, in elimination of wasteful competition in selling, in economies in electricity consumption, in standardization of machinery, spare parts, in central purchasing of stores, materials, etc., and in pooling of wagons, all of which would contribute to savings.

The Chemical Combine.

The details of the fusion proposals of the four great concerns connected with the British Chemical industry—Brunner Mond and Co., Nobel Industries, United Alkali and British Dyestuffs—have been issued. A new company is to be formed, called Imperial Chemical Industries, Ltd., with a capital of nearly £57 millions, which is about £4 millions less than the market valuation of the shares of the four individual companies at the end of last week. Profits of the new concern are estimated on a conservative basis at not less than £4 millions, after making due provision for reserves, and as the 7 per cent. cumulative preference shares of the new company will amount to £16,210,300 the dividend thereon will be covered more than three and a half times. The ordinary shares of the new company will amount to £31 millions odd and will be entitled to a 7 per cent. dividend before any distribution is made on the deferred shares of 10s. each, of which there are nearly 10 mililons. The latter share with the ordinary in any distribution of the amount available after paying 7 per cent. on the ordinary shares to the extent of one-third. The market quotation of the new ordinary shares, it would seem, may at first be in the neighbourhood of 23s., while that of the deferred shares of 10s. each, to which considerable speculative possibilities are attached, may be anything from 3s. to 5s. or even higher. Among the advantages accruing from the fusion is that the combine will be in a more advantageous position to compete with concerns of a similar kind in foreign countries and particularly in Germany and America.

Cotton and Cotton Goods.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended November 3:—

Egyptian Futures.—Sakel Contract.—Whilst, as indicated in our last report, we were prepared to witness this contract developing more resistance at the then ruling level, we must say that the strong reactionary tendency that has taken place since has been somewhat in the nature of a surprise. Generally speaking, the cause of the upward swing can be attributed to the strength of the near position reacting on the whole list, Novembers have latterly been in demand, and from a discount of 10 points with January, the difference ruling at the time of our last report, they have steadily appreciated to 38 points premium. Owing to the lateness of the crop, and our market running so far below parity with Alexandria, there is, apart from Sudans, little tenderable cotton in stock at the moment; with the spot difference quoted at 174 points on, the appreciation of the current month has, so far, met little opposition. Possibly, certain trade interests are prepared to take up cotton, but we rather doubt the desire of speculative operators for actual at the present juncture, as, in addition to running into discounts, there is a risk of spot premiums easing at a later date. Trade reports continue to show a measure of improvement, but consumers, and rightly so in our opinion, have refused to follow the advance during the past few days. The rise in American values has not been commensurate with the dearer tendency of our contract, with the result that the straddle has again widened to an attractive figure. At the ruling difference, we favour sales of March against purchases of the corresponding option in the other market. Alexandria has moved fairly closely to the fluctuations that have taken place here, but in the absence of any decided expansion in the volume of commercial support, we look for offerings continually to exercise a restraining influence and probably later to cause prices to ease again. At the moment, we are not in favour of the market and consider that prices may gradually work down to last week's level.

Upper Contract.—Rather more business has taken place in this contract during the week, and prices have shown a rather firmer tendency. With reports from America indicating some scarcity of decent grade staple cotton, Uppers may benefit both in demand and basis. We prefer to advise purchases on any material decline.

Egyptian Spot.—The inquiry for spot cotton has been of only moderate extent, and, as far as the ordinary Egyptian growths are concerned, there has been rather less business reported than during the previous week. Owing to the delay in the arrival of a shipment of new crop cotton, however, some keen competition to secure odd lots of Sakel has been witnessed. The Alexandria market has latterly been showing some signs of recovery from the low level reached towards the end of last month, and these two factors, coupled with a more optimistic feeling in trade circles, has caused a sharp upturn in the value of spot Sakellaridis. It is probable, however, that this recovery (1d. per lb. in a week) has been overdone, as the trade generally still find the difference between Sakel and American excessive, and, if half of what one hears may be believed, are determined not to commit themselves to any but the smallest possible extent at the present level.

In Uppers, the usual steady business has materialised, chiefly for cotton between 10d. and 10.50d. per lb. Prices have hardened slightly and more inquiry for forward cotton has been in evidence, much of it being for the lower qualities. Whilst the Upper future contract at 9.90d. appears a reasonable proposition at the moment, the spot quotation of 10.75d. for F.G.F. Uppers appears to be rather on the top side, and with the arrival of the next shipment or two, prices should be inclined to ease. Less business in Pilion has been reported, and White and Brown Egyptians have been neglected. A steady business has again been done in Sudan cotton, the White variety at 50 to 150 on American being chiefly in request, with an occasional inquiry for "staple" at from 400 to 600 on. The Sakel seed cotton has changed hands at from 125 to 400 on November (Sakel) contracts.

Forwardings to spinners for the week ending October 29 were estimated at 9,962 bales Egyptian and 1,326 bales Sudan. In c.i.f. contracts on the whole rather more business has been reported. Estimated sales, 1,200 Egyptians and 2,300 bales Sudan. Quotations of Sakel have been advanced 115 to 90 points and those of Upper 15 points. F.G.F. Sakel, 15.30d. F.G.F. Upper, 10.75d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended October 28, state:—

Since our last report the market has been active but the undertone has continued to be weak. The week's summary of price movements is as follows:—Sakellaridis: November, 25.20 dollars, 0.90 dollars down; January, 24.87 dollars, 0.93 dollars down; March, 25.08 dollars, 0.82 dollars down; May, 25.30 dollars, 0.60 dollars down; November, 1927, 25.92 dollars, 0.68 dollars down. Ashmouni: December, 17.20 dollars, 0.08 dollars down; February, 17.40 dollars, 0.03 dollars down; April, 17.55 dollars, 0.03 dollars down.

Sakel.—On the 25th instant the report of the American Bureau was published indicating a probable production of 17,454,000 bales American cotton against 16,627,000 bales given in the previous report published 15 days ago. So high a figure was not anticipated and its publication completely shattered the hopes of the local speculators who, even after the official announcement of the Egyptian

Government that they would not intervene in the market, still clung to their purchases on the chance of a rise. The liquidation of these speculative positions, together with some hedge selling against arrivals, caused an immediate break of about a dollar, and the close to-day is about a dollar lower than a week ago. The demand from abroad is slightly better than it was last week; we anticipated that the fall might bring us some new business and this happened to be the case.

News from up-country confirms that all over the Delta the second picking has given much better results than were expected. Arrivals are growing day by day, and with the supply of various grades getting daily larger, spot differences show a tendency to weaken. November still maintains a premium over January, but since the Government has decided not to intervene and the danger of a squeeze is thereby eliminated, we cannot see any justification for this premium.

Uppers.—In spite of the enormous estimated production of American cotton, business in this variety has been quite active, and prices fairly well maintained, as a result of which the straddle difference with Sakel has still further narrowed. The difference between December Ashmouni and November Sakel is now 800 points against 882 last week and 1,005 a fortnight ago. The demand from abroad for Uppers has continued to be quite good; America and the Continent are reported to have been the chief buyers.

We look for a continuance of active markets and a fairly satisfactory demand, but do not think that we shall see any substantial rise in values, at any rate for the time being. For some weeks yet the arrivals will be very heavy and it is unlikely that the demand from spinners will be large enough to offset the weight of the cotton coming down.

At the third October tender, 4,000 kantars dockets were issued, making a total for the month of 6,750. The week's receipts amount to 363,583 kantars against exports 217,353 kantars; the stock in Alexandria is 1,858,823 kantars.

Spot: During the past week we have had a somewhat improved demand from abroad with a consequently larger turnover and Minet el Bassal has been more active. Sales amount to about 28,500 bales, of which we estimate 10,000 bales Sakellaridis, 15,800 bales Uppers, 1,450 bales Zagora, 1,000 bales Pilion, 250 bales White, and a few bales of Brown. Although Upper Egypt continues to attract the larger part of the demand, spinners this week have paid rather more attention to Sakel which, with the increasing crop movement in Lower Egypt, is beginning to show on the market in fair quantities.

Sakellaridis: An improved business has been done covering all grades. Extra cotton continues to bring very high prices and such lots as appear are quickly taken up. Spot differences are generally without much change.

Ashmouni and Zagora: Continue to absorb the majority of the demand and a good business has been done in all styles. With the exception of Fully Good, which is a little dearer, spot differences are without much change.

Pilion: Continues in good favour and an increased business has been done, chiefly in the grades above Fully Good Fair. Spot differences are without change.

Brown: Is neglected and only a few bales have been done. Spot differences are unchanged.

White: A fair business has been done without change from last week's differences.

Crop, 1926: Weather conditions during October, both in Lower and Upper Egypt, have been ideal for maturing the cotton remaining in the fields, and the plants are still giving cotton. In view of the recent favourable conditions, we find it necessary to increase our crop estimate of the 13th instant to about 7,350,000 kantars, of which Sakel about 3,200,000 kantars, Ashmouni and Zagora about 3,400,000 kantars, Pilion and other varieties about 750,000 kantars.

TEXTILES.

IF you are dealing in Textile goods, you will be well advised to try K. JEBARA, 52, Princess Street, Manchester. (Established 1887).

WINTER IN SUNNY LANDS.

A little brochure with the above suggestive title has been issued by Messrs Dean and Dawson, Ltd., the well-known tourist agents, giving a selection of their many winter tours. Year by year the tendency to desert the British Isles for one of the innumerable winter resorts abroad inclines to increase, and those who are thinking of a holiday whether at some predetermined place or not will find their requirements fully catered for in this little publication. They may want to go no further than the Riviera or it may be to North Africa or farther afield to Egypt or India or South Africa. For all these and similar trips they will find descriptions of tours given, and as an example, and, be it added, a very attractive one, one may cite the four weeks' combined cruise and tour to Lisbon, Madeira, and the Canary Islands, the inclusive charge for which from Liverpool is thirty-six guineas. It remains to draw attention to the really excellent illustrations with which the brochure is liberally provided.

COMPANY NOTES AND REPORTS.

BENGAL-NAGPUR RAILWAY.

The report of the Bengal-Nagpur Railway Company for the year to March 31, 1926, states that the net earnings totalled Rs.3,15,42,721, as against Rs.2,94,35,941. Adding outstandings of previous year realised Rs.19,450, and deducting interest on Secretary of State's capital, Rs.1,80,63,339, and interest on share capital and debentures, Rs. 48,87,035, leaves Rs.86,11,797. Leave and deputation salaries of State Railway officers paid in England and adjusted in accounts of the Bengal-Nagpur Railway absorbed Rs.18,574, the surplus profits being Rs.86,30,574, as compared with Rs.71,54,604. The company's share amounted to Rs.5,87,135 after payment of Indian income-tax. This sum produced £43,728. In addition to the second half of the guaranteed interest at £1 15s., less tax, the directors recommend a further dividend of 15s. per cent., less tax at 2s. 1½d. in £. With this payment the whole return for year will again be 5 per cent., less tax.

Company Meeting

ANGLO-PERSIAN OIL COMPANY.

Current Year's Prospects.

Sir Charles Greenway's Retirement.

The seventeenth ordinary general meeting of the Anglo-Persian Oil Company, Limited, was held on November 2 at Winchester House, Old Broad Street, London, E.C. Sir Charles Greenway, Bt. (chairman of the company), presided.

The Secretary (Mr. John Clark) read the notice convening the meeting and the auditors' report.

The Chairman, who was received with cheers, in his speech in moving the adoption of the report and accounts, said:—Ladies and gentlemen,—The report and accounts which we have submitted to you this year, and which, with your permission, we will take as read, are again, I am pleased to say, of a very satisfactory nature and more than confirm the forecasts I have given you in previous years.

If you will turn to the profit and loss account you will see that the profit for the year is £4,383,232 0s. 6d. as against £3,571,966 18s. 7d. in the previous year, being an increase of over £800,000, and that after allocating £2,028,100 to reserve funds and extra depreciation, as against £1,193,000 in the previous year, the amount carried to the profit and loss account in the balance-sheet shows an increase of about £330,000. Before arriving at the trading profit of £5,711,039 11s. 8d. shown on the credit side of the profit and loss account, we have, I should explain, written off in our main and subsidiary concerns a total of nearly £4,000,000 in respect of depreciation and special reserves, making, with the £2,028,100 dealt with in the profit and loss account before you, a grand total of about £6,000,000, which has been appropriated out of the year's earnings for depreciation and reserves.

If you will now please turn back to the first page of the report you will see that the balance at credit of profit and loss account, after making these allocations, was £4,306,699 13s. 6d., out of which we have already paid preference dividends and an ordinary interim dividend of 5 per cent., absorbing a total of £1,322,500, and out of the balance we now propose the payment of a final dividend of 12½ per cent. on the ordinary shares, absorbing a further £1,118,750, and leaving a balance of £1,955,449 13s. 6d. to carry forward, subject to excess profits duty, if any, for the year ended March 31, 1921.

The Bonus Issue.

In addition to the dividend to which I have referred, it is also proposed to give the ordinary shareholders a more tangible interest in the prosperity of the company by capitalising the main portion of our general reserve fund, and making a bonus issue of one ordinary share for each two ordinary shares held by ordinary shareholders on the register on November 20 next, and after the conclusion of the ordinary business of this meeting I will submit to you the necessary resolutions dealing with this matter.

You will see from the balance-sheet that we have now transferred the amount which formerly stood at the credit of share premium account to the general reserve account, to which it properly belongs, bringing the total of the latter to £5,163,128 11s. 6d. The proposed issue of bonus ordinary shares will absorb £4,475,000 of this amount, leaving a balance of £688,128 11s. 6d. at credit of the general reserve fund, which we propose to build up again from time to time as opportunities occur.

Balance-sheet.

I will now deal with the items calling for attention in the balance-sheet.

The first item on the debit side is the Five per Cent. Debenture stock, which has been reduced by £125,000, being the amount falling due for redemption during the year. The second is the Six and a-Half per Cent. Five-Year Secured notes. These have been reduced by purchase and cancellation to the extent of £144,500, and we have now given notice of our intention to repay a further £1,000,000 of these notes on January 1, 1927. This operation, which is rendered practicable by the great strength of our financial position, will result in a substantial saving in interest. The third is the employees' provident pension and insurance fund. This has been added to to the extent of about £380,000, which, although most satisfactory from one point of view, is, on the other hand, undesirable, inasmuch as the large amount now standing at the credit of this fund is at times somewhat embarrassing to us. To overcome this difficulty we are considering the advisability of revising the rules of the fund in such a way as will secure greater benefits to the employees and at the same time provide for the control and custody of its money by trustees.

Coming now to the assets side of the balance-sheet, the first item calling for remark is the one under the heading of "Purchase price of concessions, etc.," which has been reduced by the substantial amount of over £4,500,000. This reduction is largely due to the issue of £4,000,000 Debentures of British Tanker Company, Ltd., last December, which enabled that company to pay off its indebtedness to our company to the extent of over £3,000,000. A further cause of the reduction is the alteration in the system of operation of our subsidiary refinery company, the National Oil Refineries, Ltd. Formerly crude oil was sold to this company, and stocks of crude and refined products in this country appeared in its balance-sheet, and stood in the Anglo-Persian books as an advance to the company. Now we have adopted the system, which is a more convenient one for us, of consigning the crude to the National Oil Refineries, Ltd., and letting that company refine on our account at an agreed charge. This accounts for a transference from the stocks account of the one company to that of the other of over £2,000,000. On the other hand, there has been an increase by a transfer from the next heading, "Refineries, etc.," owing to the formation of some further subsidiary companies. In connexion with this item I would remind you that, although the book value is only £21,880,439, the actual value is enormously in excess of this figure. To take one example only, the value taken for the shares we hold in our principal producing company—the First Exploitation Company—is only 13s. per £1 share, although this company paid a dividend of 45 per cent. per annum in 1924-25 and 50 per cent. per annum in the year under review, and will no doubt pay still larger dividends in the future. Many of our other important assets in Persia and elsewhere similarly stand in our books at far less than their real value.

The next item is refineries, tank installations, etc., which, as I have just mentioned, has been diminished by a transfer to the preceding account, while the depreciation written off is in excess of the capital expenditure during the year. The next is stocks of crude oil products, etc., the amount of which is much greater than in the previous year owing to the different method of treating the crude oil shipped to our refinery at Llandarcy to which I have just referred. The next is debtors and debit balances, in which there is an increase of about £600,000 which is accounted for by the expansion of our business. The next two are British Government securities and cash, the total of which amounts to £5,865,191, as against £1,852,148 in the previous year, or an increase of over £4,000,000 in the liquid resources of the Anglo-Persian Company, apart from substantial sums held by our subsidiary concerns. To-day the position is, I may say, even more satisfactory.

Need for Large Liquid Reserves.

With such large liquid reserves in hand, some disappointment may be felt that we have not made a larger cash distribution to the ordinary shareholders, but in a constantly expanding concern such as ours one of the essentials of successful working is the possession of ample funds with which to meet any capital outlay which it may be advisable to incur, whether in the direction of extending our present organisations, or in the acquisition of new oilfields or properties. Last year I told you that we did not, during the year under review, contemplate increasing our production of crude oil materially, because some breathing space was required in order to enable us to secure the best possible results in every direction from the production already available. This work of stabilisation is, however, now sufficiently forward to enable us again to turn our attention to larger production and to enable us to secure this a very large amount of further capital outlay will be incurred within the next year or two in the provision of additions to our pipe lines, refineries, tankers and distributing organisations. This being the case, I am sure you will appreciate the necessity for conserving our liquid reserves as much as possible until we have more nearly approached the maximum production of which we think our fields are capable. What that maximum may be it is impossible to say, but the underground stores of crude which we have already proved in our concessions are so great that we can look forward with confidence to a continuance of the progress which has so far characterised our operations—at any rate, for some years ahead. (Applause.)

The report and balance-sheet now before you, together with the explanations I have given you, fully justify, I venture to assert, the conservative policy which we have been following ever since the company first came into existence. The history of the company ever since its formation has been one of continual progress and success. Profits, it is true, had some setback, following the period of War and post-War inflation but this was common to practically all industrial concerns. From that time onwards, however, our profits have shown year by year steady and substantial increases, due partly to increased production and partly to reduction in costs, and I see no reason for not anticipating similar progress in the years to come.

As to the prospects for the current year, all that I can say now is that, subject to there being no radical change in the prices of petroleum products between now and the end of our financial year, there will be a continuance of the augmentation of profits which has been shown in recent years. (Cheers.)

As regards the market for petroleum products, it is always difficult to prophesy. At present, judged by past consumption figures, there would seem to be an excessive production of crude oil, but the daily increase in consumption all over the world is so constant—and there are still so many countries in which there is room for large expansion—that it is not at all certain that the present production is in excess of the increased needs of consumers, in which case there would seem to be little probability of any substantial reduction in prices. In any case, as I have pointed out before, Persian oil stands in a very favourable position for meeting any competition that may arise.

Digitized by Google

The Fields.

The marginal drilling on our main fields in Persia which we have been carrying on for some time past with a view to ascertaining the full extent of the productive area in these fields is proceeding steadily, and numerous wells drilled in during the year not only materially advance the proved area into new ground, but also further demonstrate the remarkable richness of these fields—both quantitatively and qualitatively. To the main line of the productive area in the Maidan-i-Naphtun, Maidan-i-Naftek, and Maidan-i-Bibian fields further drilling has now added another large area of proved territory, bringing the total area so far proved up to about 30 square miles. (Cheers.) We have hitherto described this productive area as three fields, because each of these Maidans, or plains, has borne a separate name from Biblical times, but drilling has now proved beyond doubt that they all form one vast field, in any part of which we can drill with the certainty of finding flowing wells of large capacity. This constitutes a field which, it is now beyond doubt, is without its like in any part of the world—either for size or productiveness—and in order to give it its true significance we purpose in future referring to it as one field, under the name of Musjid-i-Sulieman (Solomon's Temple)— the postal name which has now been given to the district by the Persian Government—after an ancient temple the ruins of which crown one of its heights.

The marginal test drilling which we are conducting on this field has also, I may add, recently revealed the existence of an important bifurcation of the main anticline to the north-west. It is too early yet to indulge in prophecy as to the commercial significance of this discovery, but our geologists are optimistic.

The production from our main field during the year under review does not show, for the reasons I have already referred to, any very large increase. I will not again weary you with a statement of our annual productions up to the present time, but will merely mention that the production last year was 4,556,157 tons, against 4,333,933 tons in the previous year, and as against my last year's estimate of 4,500,000 tons. The current year, like the last is partly one of stabilisation and partly one of preparation—throughout all the organisations complementary to the fields proper—for larger production in the future, and consequently it is not our intention to draw on our underground store of oil to the extent of more than about 4,750,000 tons.

A great deal has been done on the main fields during the year to improve yet further the high efficiency of its equipment. The water supply has been immensely improved by a new line northward to the Karun River, and water—once an occasional source of anxiety—is now amply ensured for all purposes. The plant for recovery of gasolene from the fields "wet" gas—to which I referred last year—will very shortly be in commission, much to the advantage of the company, and steps have been taken, or are being taken, to extend the use of the "dry" gas for heat and power purposes wherever practicable. Our chemical research department, of which a section is located on the fields, is busily engaged on the elucidation of this problem, as well as of the many others which present themselves in the course of our development work. Before leaving the subject of the main fields, I should like to refer appreciatively to the remarkable skill shown by our fields staff under the able direction of our general manager, Mr. J. Jamieson, in the handling of our large high-pressure wells.

Testing Operations.

Testing operations are well advanced in the six new areas referred to at the last general meeting, but no wells have yet reached the presumed oil rock, though gas has been met with in two of them. On the other hand, nothing has come to light to discredit the assumptions which led to the selection of the areas for test drillling. Persia, I may explain, is a most difficult country in which to operate, and several years are normally required before the necessary roads can be laid into new territory, drilling material assembled, rigs erected, and holes drilled several thousand feet through strata which, notwithstanding all the skilled geological advice we command, must necessarily offer many practical difficulties to the man behind, or rather above, the drill. Roads—which, as you no doubt are aware, are practically non-existent in Persia—are one of the chief causes of delay in our testing operations, as wherever we go we have to make our own roads for the transport of plant. To carry on our operations we have so far had to construct over 1,000 miles of puckha roads suitable for motor traffic—the greater portion through hilly and mountainous country—as against a total of only 800 miles of roads of a similar class existing in the whole of the rest of Persia.

Six wells are now drilling in the Naft Khana area, to which I referred by name for the first time at our last meeting. I had previously recorded the fact that one well—with an initial daily capacity of 1,000 barrels—had been drilled. During the year now under review, another well—situated nearly one mile from its predecessor—also came in at an estimated daily rate well in excess of 5,000 barrels. I may mention that drilling in this area is particularly difficult, and the greatest care has to be taken owing to the very high gas pressures encountered; hence progress is slow. The wells now drilling in this field extend over a length of 5½ miles, the object being—as I have previously stated—to determine whether the oil deposits in this region are so extensive as to justify the large expenditure that would be involved in the provision of a pipe line to the seaboard. In the meantime, however, since a considerable degree of production is already assured, a small refinery is being erected in the transferred territories—near Khaniqin—with the object of supplying the markets of Iraq and Northern Persia with oil won in those territories. This refinery should be ready to operate early in 1927.

I may take this opportunity of stating, with the approval of the Turkish Petroleum Company, in which we have, as you know, a very substantial interest, that a geological examination has been concluded by them over 24,000 square miles in Iraq, and that an active testing programme by the drill in approved areas will shortly commence.

In Albania test operations are now proceeding in three separate zones of our concessions. One particular well recently struck a good show of heavy asphaltic oil at a relatively shallow depth; but as oil of the quality found could not, unfortunately, be regarded as a commercial proposition, the well is now being deepened in the hope of striking a higher grade oil at a lower level. Incidentally, I should like to remark that the geological conditions of the country, so far as they relate to the possible discovery of oil, are by no means easy of interpretation, and success in one zone by no means postulates the existence of favourable and attainable structure in any other—even though it may be adjacent. I mention this since a certain syndicate openly tells its shareholders that the future value of its shares is dependent upon our drilling operations, and many of these shareholders have taken the unusual course of writing to us for confirmation. (Laughter.)

After referring to the tanker fleet, the question of distribution and other matters, Sir Charles Greenway paid a warm tribute to the staffs of the various concerns of the company, and said he was sure the meeting would support him in his expression of appreciation. He proceeded:—

I will now, with your indulgence, finish on a more personal note. I told you last year that I did not contemplate immediate retirement, but I feel that the moment has now arrived when I can without prejudice to the interests of the company withdraw from my more active duties, and I therefore propose to take this step on my return from a visit which I hope to pay to our Persian fields early next year. It is naturally most gratifying to me that I can make this change at a time when the company, to the development of which I have unremittingly devoted myself for many years, is in so sound and healthy a condition, and I am confident that under the care of my colleagues, to whose high ability and loyalty I should like to pay a warm tribute, it will continue to expand and flourish.

My successor, Sir John Cadman, happily needs no introduction to you, and I will only ask you to extend to him the unfailing consideration and support which you have been good enough to accord to me, and for which I thank you most sincerely. I need only add that, while I shall be laying down the reins as chairman I shall still take a keen interest in the company's welfare, and that my assistance and advice will always be at my colleagues' and the company's disposal. (Loud cheers.)

The motion was seconded by Lord Bradbury of Winsford, G.C.B., and was carried unanimously, and the proposed dividend was unanimously approved.

Sir John T. Cargill then paid a warm tribute to the Chairman and, referring to his pending retirement, said:—It is not given to any of us to go on for ever, and I congratulate Sir Charles on the wisdom he has shown in choosing so fitting a moment for his retirement. He is still, as you can see for yourselves, a thoroughly hale and hearty specimen of manhood. Many years are we hope and believe before him, during which he can extract the maximum enjoyment out of a life which fortunately holds many and varied interests for him. Not the least of these enjoyments, I feel sure, will be to watch the growing fortunes of this great company, which owes him so much, and to continue to lend his advice and assistance to those on whose shoulders his mantle has fallen. We, his colleagues, attach much importance to this, and it is in our minds to ask Sir Charles to put the seal on his kindly offer of future assistance by considering the acceptance of the title of president, which,

while leaving him free to enjoy his well-earned leisure, will still keep him linked to the company and give us the right to take advantage of his ripe experience and long-tried sagacity. (Cheers.)

Lord Bradbury:—Mr. Chairman, ladies, and gentlemen,—As the representative on the Board of the Anglo-Persian Oil Company of His Majesty's Government, I think it is not inappropriate, perhaps, that I should add just two words to the tribute which Sir John Cargill has paid to our retiring Chairman. I think it must be of the greatest satisfaction, not only to the Government, but also to the taxpayers of this country, that the affairs of this company in which the Government is so largely interested, have, from its very inception, been in such able hands.

At the time when the Government originally took an interest in this company, I was serving the State in another capacity. I was then Secretary to the Treasury, and it fell to my lot to conduct on behalf of the Government some of the preliminary negotiations with those members of the company who were anxious that the Government should take an interest in its concerns. I very well remember the pleasant associations which I then had with Sir Charles Greenway, and the impression which I formed of his ability in the business world; that impression has ever since been confirmed. After all the opinions of individuals on these matter are fallible and unimportant. We have the standing success of this great company as the real tribute to the genius of Sir Charles Greenway. (Applause.)

Sir Hugh Barnes, K.C.S.I., K.C.V.O., who followed, said:—It is permissible for one who has been associated for 15 years in the working of the company with Sir Charles Greenway to express very deep regret that he is leaving his close association as the company's chairman. I am sure I shall only be voicing the feelings of all of you if I say that we owe him a most sincere debt of gratitude, not only for the ability with which he has brought this company to its present state of prosperity, but also for the magnificent courage with which throughout his management he has fought—and he has often had very severe fights in that connexion—to maintain the independence of this company as the "All-British" company which it is to-day. (Cheers.)

Sir Charles Greenway thanked the speakers, and said he regarded it as an enormous compliment that he should be asked to accept the post of president; he acceded to the request with the utmost pleasure.

The retiring directors were re-elected, and after the resolutions relating to the proposed issue of bonus shares had been carried unanimously, the meeting terminated with a vote of thanks to the Chairman, proposed by Sir A. Boyd Carpenter and seconded by Mr. Thompson, which was briefly acknowledged by Sir Charles Greenway.

The Eastern Telegraph Company have entered into an agreement with the Marconi Company for the erection of a wireless station in Greece.

It is announced that the Cyprus Asbestos Company is to issue at 25s. per share 100,000 preferred shares which will rank with the 285,000 already issued. The underwriters will take half the total in accordance with their agreement, 2,000 will be reserved for the company's staff, while the balance of 48,000 will be offered to the shareholders.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Greek Elections.

If the latest returns of the Greek elections are to be regarded as final and correct—the reservation is necessary in view of the number of official variants circulated during the first few days after the polling day—the question of the régime in Greece may be regarded as free from challenge in the immediate future, but the country would seem to be far from that political stability of which it is in need. The Republican parties are returned with 145 seats as compared with the 129 of the Royalist group; apart from the views of the followers of General Metaxas, who does not favour the raising of the constitutional question at the present moment, there are nine Communists and three Agrarians, who may be expected to be loyal to the republican system. On the other hand, the prospects of any Ministry formed to succeed General Kondylis's Cabinet are not bright. The Liberal Unionists with 106 seats are numerically the largest group in the Chamber, and it may be taken for granted that M. Kaphandaris will be invited to form a Government; but his following is formed of two distinct parties, his own and those of M. Michalakopoulos, who came together for the purposes of the General Election, but will not necessarily see eye to eye with one another when the Royalist danger to the Republic is regarded as having passed. Unless the 106 seats of the united group are very unevenly divided, it may be found that the strongest individual party in the new Chamber is that of M. Tsaldaris, with 61 seats, which constitutes the right wing of the Royalist group. It is true that the twenty-two Independent Republicans and the sixteen Independent Royalists have yet to assort themselves. As their natural instinct will be to side with the party which offers the best chance of office now or hereafter, M. Kaphandaris may be able to point to a following that justifies his selection as Prime Minister with only one month's previous experience of the post, as compared with the eight months' tenure that M. Michalakopoulos has to his credit.

Republic or Monarchy?

The results of the general election, it is to be feared, are far from bringing Greece an end to her political troubles. General Kondylis insisted upon the system of proportional representation, in order that the scales should be weighted against the Royalists. To make doubly sure, he issued at the eleventh hour a statement to the effect that he could not be responsible for anything that the Army did in the event of a Royalist victory. A rumour had been spread that the Officers' Club had pledged itself to resist by force a Royalist Government, and General Kondylis had been approached as Prime Minister to reassure public opinion on this point. His answer can hardly have failed to influence the more timid or more moderate among the Royalists; yet the result of the election indicates the extent to which Greek public opinion under the most unfavourable conditions remains true to the monarchical system. In the circumstances it is well that on the Royalist side there is one man with a substantial following who realises the unwisdom of challenging the existing régime. The Greek electorate is not to-day a free agent. For more than four years the Army, or rather a group of military and naval officers, has dominated Greek politics, and it will not lightly resign its privileged position. The republican system has been introduced and for the present could be superseded only at the cost of civil war. It has been responsible for an act—the execution of six Ministers—that shocked the conscience of Europe, and for the dictatorship of General Pangalos, that seems to have shocked the Greeks. General Metaxas, therefore, may yet be able to claim that he is the

Digitized by Google

better Royalist than M. Tsaldaris, because he is prepared to give the Republic a longer trial and sets his face against any attempt, after one fiasco, at an armed challenge.

A Coalition Government.

As a coalition Government is inevitable, it is to be hoped that the good sense of the political leaders and of the new deputies will be exercised in making it a success. Only in this way can the unanimity with which they have opposed General Kondylis and driven him out of politics be justified. Proportional representation does not appear to have fulfilled the latter's expectations; but it was clearly an experiment that Greece would have to try one day, and it is better than it should have been imposed upon her by a doctrinaire politician before any considerable body of public opinion had been able to convince itself that it believed in the system. With the issue between a Republic and a Monarchy set on one side for the time being, there should be no serious obstacle to a coalition that will bring more talent to the Government than was possible with the country divided into two actively hostile camps. The interference of the Army in politics remains a shadow over the deliberations of the politicians, but by union among themselves and disinterested service on their country's behalf they should in time be able to eliminate the military evil.

The Coming Session in Egypt.

The reopening of the Egyptian Legislative Assembly has been preceded by a welcome change in the attitude of the Zaghloulist Press on the subject of Anglo-Egyptian relations. In the place of the stereotyped criticisms of Great Britain for not surrendering unconditionally to any and every Egyptian demand in connexion with the Reserved Questions, there has been a tendency to urge the necessity for a policy aiming at friendly agreement with the British Government on these points, based on the maintenance of the present Constitution for Egypt. It is hardly necessary to state that Egypt will find Great Britain anxious to meet her half-way in any settlement of outstanding questions. The change of front on the part of the Zaghloulist Press, however, is more of a domestic episode for Egypt than of practical concern for Great Britain. Under the Government of Adly Pasha, as under his predecessor Ziwar Pasha, the official relations between the two countries have been eminently satisfactory. The obvious point of view that reserved questions must remain reserved until they can be discussed amicably has been accepted by both Governments, and there has been no controversy nor difference of opinion to disturb Anglo-Egyptian harmony. If any fears are entertained regarding the course of events in the coming session, it is because the Zaghloulist extremists were credited with the intention to insist upon a particular kind of settlement that could never be reached in a friendly spirit. The new line now taken by the Zaghloulist organs suggests that the counsel of the extremists has been rejected, and that the saner policy associated with the non-Zaghloulist element—which Zaghloul Pasha himself has shown signs of favouring as soon as he could shake himself free of his extremist incubus—is to be endorsed by the country as a whole.

The Iraq Mandate.

The examination by the Permanent Mandates Commission of the British Government's stewardship in Iraq is stated to have ended with an expression of the Commission's whole-hearted approval of the administration for which Great Britain accepts responsibility in Iraq. At the first session Sir Henry Dobbs gave a long and detailed account of events in the Mandated territory from the end of the War until the present day. No part of it was more likely to appeal to the Commission than the statistics that he gave of British officials in Iraq. The number of senior officials in 1920 was 473; to-day it is 104. Of the subordinate staff there are now a hundred British and about six hundred Indians, compared with 530 and 2,200 respectively in 1920. The system of administration, the British High Commissioner added, had worked smoothly, and the relations between the Iraqi authorities and the British were excellent. The large measure of independence reflected in the present system of government in Iraq is not illusory and does not constitute a camouflage behind which the British Government really holds the reins of power. Within the limits prescribed by the British Government's obligations towards the League of Nations the Iraqi Government is free and independent; interference with its actions or decisions on the part of the High Commissioner is daily becoming less frequent as it becomes less necessary. It will be strange if the Mandates Commission was not carried back in thought to the report delivered by another High Commissioner last June, which was given up in part to an attempt to prove how impossible were the inhabitants in his mandated territory and undeserving of the consideration either of the Mandates Commission or of the Government that he represented. In spite of the different conditions in Syria and in Iraq it is possible that broader vision and large-mindedness would have proved as successful in the former as in the latter. "It may be contended," Sir Henry Dobbs said to the Commission in Geneva, "that, in our desire to give rapid effect to our intentions and to the spirit of the Covenant, we are attempting to teach Iraq to run before she can walk. I answer to that criticism that the attempt has been successful."

COLES PASHA.

We regret to announce the death, at the age of 72, of Coles Pasha, whose life-work in the transformation of the Egyptian prison system was well-known. Coles Pasha, it will be remembered, frequently contributed to the columns of THE NEAR EAST; he had an inexhaustible fund of reminiscences on which to draw. Coles Pasha left the Indian Police for service with the Egyptian Government in 1883. In 1897 he was appointed Director-General of Egyptian Prisons—an office which he held until 1915. In 1919 he published his delightful "Recollections and Reflections.' His death occurred at Biarritz, where he spent the latter part of his life.

It is stated that the Amir Abdullah of Transjordan is visiting his father, the ex-King Hussain, in Cyprus.

RUSSIA AND THE MIDDLE EAST.

The comparative success of Bolshevist Russia in her attempt to attract not only the Islamic countries of the Middle East but other lands also, such as Mongolia and China, is sufficiently striking; but there are dangers in overestimating it. It is a quick but facile mind that, dogmatising on the inevitable hostility of Russia to European aims in the East, would seek to inform Western policy for ever in an anti-Russian sense. We hold no brief for Bolshevism, certainly: what we would here imply is merely that an understanding of it is more important than its comprehensive treatment as an untouchable bogey. Now although in the Middle East a working agreement with the Russians is not supremely important, it is a matter of enormous interest, and any events which may not be interpreted as leading from that end surely deserve encouragement. In the main, we believe British policy in the Middle East of late years to have been correct; we desire to see, therefore, a change, not on Great Britain's part, but on that of Russia. Admittedly there are as yet no signs of such a consummation; but, while to hope that, as the Bolshevists have perforce to modify one after another of their theories they may at last come with more open hands to the West, may be a distant dream, to regard Russia as a chronic and immutable enemy of mankind is a counsel of despair. This said, our anxious but unharassed attention to may be turned to that section of the East where the Soviets' influence is most noticeably dominant. It is outside the sphere of THE NEAR EAST AND INDIA to remark upon the success which has crowned the Bolshevists' "rigging" of Mongolia; nor can we deal with their undoubted but still incomputable influence in China. In the Middle East, however, it is scarcely open to doubt that they have drawn independent States into their orbit most cleverly and persistently; but even yet it is not clear that that attracting has for its most important object the derogation of the West. Russia has made, or has supervised the making of, treaties between such countries as Afghanistan, Persia, Turkey and herself, and it has consequently been assumed that this orgy of treaty-making may finally debouch or debauch itself in a kind of "pan-Asiatic League." The days have gone by, however, when "pan"-this or "pan"-that could startle the imagination of any but the journalist and the journalist's readers; so that, while it is perfectly obvious that Russia is endeavouring, probably more from generally political than from purely Bolshevist reasons, to dominate Central Asia and its Islamic States, this actual signing and talk of mutual treaties and alliances may not unreasonably be compared with similar movements recently in the West, due allowance being made for the delay of the East in following the West.

There is, therefore, more guess-work than anything else in the somewhat horrified comments of Western observers upon the successive visits of such men as Mirza Khan Timour Tash to Moscow and subsequently to Angora, of Dr. Sao-Ke Alfred Sze to Angora, or of Tewfik Rushdi Bey to meet M. Chicherin at Odessa. That these versatile patriots can accomplish for their countries anything more than pleasant talk or treaties that are more resonant than pregnant it is difficult to believe. In the political sense Russia has, one would think, pulled these countries not so much to the top of her bent as to the fullest extent that their fervid but controlled nationalisms will allow. It is arguable that men such as the Amir Amanullah, Riza Shah Pahlavi, or Mustapha Kemal Pasha are living in a fool's paradise if they imagine that their respective States are defensible from any Bolshevist attack; but it is difficult to prove that they have by any treaties recently made with the Moscow Government left their countries wider open to attack from the quarter whence threats have for so long derived. Nor is it easy to determine how exactly British interests are being compromised by the recent political activities of the Bolshevists in the Middle East. Only last week, for instance, the Foreign Secretary was able to assure the House of Commons that the Russo-Afghan Treaty signed at Pagman on August 31 contained nothing prejudicial to British-Indian interests. Similarly with the Turko-Persian Treaty of last April; it contained nothing likely to disturb existing facts. No: as we see, it is not in the political sphere that the influence of the Bolshevists is to be feared, but rather from the apparently increasing hold which Russian thought is getting upon Islam. Russian Mussulmans are extremely energetic in their work among the Faithful; it was not only political reasons, for instance, that governed the zeal of Bolshevists among the former Sharifians and now the Wahhabis of the Hijaz. The Soviets indisputably are holding themselves up as the champions of Islam, and in this guise presented themselves in countries from the Atlantic to the Pacific. Russian Mussulmans, it may be remembered, were highly represented at the first Mecca Conference last June, and there can be no question of the unflagging ardour of the de-Christianised leaders of Moscow in their attempts to persuade Islam that it is through the agency of no Christian Power that the long-suffering Muslims' salvation may come. This particular experiment of the Soviets is possibly the most interesting of all, from the Oriental point of view: but here we must content ourselves with expressing the belief that Islam will finally take care of itself. It will extract what good it can—and that may be considerable—from the Bolshevists' unsought assistance; but the atheism of Moscow is no more likely to disturb the fundamentals of Islam than the atheism of Angora is likely to make the mass of the Turks non-Muslim.

In the narrower and more immediate aspect, it is indeed possible that as a result of all the meetings in Moscow, Angora, and Odessa, a tripartite Treaty between Russia, Persia, and Turkey be achieved. The Moscow Government, temporarily flustered by the adhesion of Germany to the League of Nations, has manifestly been busying itself in the East to achieve some sort of answer to the apparent attractiveness of the Geneva institution. Moreover, it would be necessary to show little surprise should it ultimately succeed in joining Afghanistan and even China to a loose alliance already containing Persia and Turkey. There is no need, however, to calculate upon the conduct of China and Persia, members of the League of Nations already, until they have actually joined the rival, or, as they may see it, the complementary League. Nor is one bound to suppose that, if such a League of Middle Eastern nations were formed, it would of course work in an anti-Geneva sense. Turkey alone, who, incidentally, would be the lynch-pin of such a construction, could prevent this. This, in view of Turkey's past record towards the League, may sound strange. But Turkey knows very well, from her experience in the Mosul affair, that the League, if it makes up its mind, will, by hook or crook (even if it were chiefly crook, it would be all the same to Turkey) get what it wants. Turkey knows very well, too, that the Italian danger is not an unreal one. And Turkey knows also that only the League of Nations could save her from such a peril. Chicherin may, with official luncheons and all kinds of blandishments sing to Turkey, "Comrade, look not on the West": but astigmatism is not one of the Ghazi's known defects. In fine, Russia's immediate policy in the Middle East is likely to break down precisely at the point where at first it seemed to have its strongest link—Turkey.

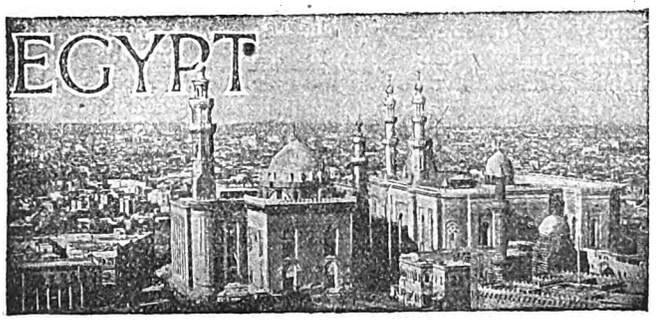
The Near and Middle East*

From Our Own Correspondents.



Cairo, November 6.

The Move to Cairo.

The seat of Government is still in Alexandria, but is expected to move to Cairo in the course of the next week. The Residency has already transferred from Bulkeley to Kasr El Doubara in readiness for Lord Lloyd, who is arriving on Monday, and by the end of next week all who count for anything in the political and social world will have resumed their activities in the capital.

Important Developments.

Although cotton continues to be one of the important topics, an equally absorbing subject of conversation is the new partliamentary session, which will begin on November 18. There seems to be a widespread feeling that we are on the threshold of important political developments. There is nothing definite on which to base any forecast, but the general situation both within and without Parliament, the discussions which Lord Lloyd has had with the Imperial Conference and the authorities in Paris and Rome, as well as Sarwat Pasha's visit to the British and French capitals, have created a pregnant atmosphere, and this would explain the expectancy with which in all circles the arrival of the High Commissioner and the opening of the new parliamentary session are awaited.

The Frontier Treaty.

Although everything is ready for the signature of the Protocol covering the agreement recently reached with regard to the Tripoli Frontier Treaty, the final ceremony will, I understand, be delayed until Sarwat Pasha, as Minister for Foreign Affairs, is able himself to represent his Government in this matter. The points at issue were access to Ramleh-Well, which had been ceded in the Treaty to Egypt for the use of Sollum, but which the delimitation rendered inaccessible, customs administration on the frontiers, pasturage rights of nomad bedouin, jurisdiction over Tripolitan bedouin who cross the frontier in search of pasturage and the nationality of the Senussi.

All these questions have now been settled with the exception of the nationality of the Senussi, in regard to which the agreement and Protocol will declare that settlement will be negotiated diplomatically. Italy cedes to Egypt the use of a coastal and an inland route giving access to Ramleh-Well. No customs duties will be levied by either country on imports across the frontier until Egypt is able to make new commercial agreements—which will not be until 1930. And bedouin who cross the frontier will be exempt for one year from any taxation on the cattle they bring with them for pasturage. As for jurisdiction over Tripolitan bedouin who cross the Egyptian territory in search of pasturage, Italy recognises the right of the special courts set up by the Egyptian Frontiers Districts Administration to deal with these bedouin in civil, penal or personal status matters in the same manner as the locally established bedouin. The only time at which the Italian Consuls can intervene is when the death penalty has been awarded. The settlement of these points has been arrived at only after considerable discussion between the two Commissions, and both they and their Governments are to be congratulated on having reached a satisfactory solution and so removed the many causes of friction which the application of the Treaty might have produced.

Slatin Pasha.

Two interesting figures, closely connected with the Sudan, have just passed through Cairo, Sir Rudolph von Slatin Pasha and Sir Sayyid Idris El Marghani. The former, whom everyone will remember as the Slave of the Mahdi and later Inspector-General in the Sudan, is revisiting Egypt after an absence of twelve years, the outbreak of War having put an end to his service with the Sudan Government. Slatin Pasha, who looks younger than ever, seemed unfeignedly pleased to be back in these parts again, and during his short stay in Cairo he was given very little peace by his Egyptian friends and those of his former Sudan colleagues who happened to be in Cairo. He is making a trip up the Nile as far as Wadi Halfa with a party of American friends, but is not certain whether he will have time to visit Khartoum, although he greatly wishes to see the changes that have taken place in the land which he knows better probably than any other living European.

Sayyid Idris El Marghani.

Sayyid Idris El Marghani is the head of the *tarika* of that name and one of the most influential leaders in the Sudan. He came to Egypt to consult his doctors on the throat trouble from which he has suffered for some time; when I saw him the other day he had derived great benefit from the treatment he has undergone since his arrival. He expressed himself as delighted with the manner in which he had been received in Egypt, and with his visit to the British warships recently in Alexandria; these had evidently impressed him with the power of the British Empire even more than his visit some years ago to London, of which he still speaks with pleasurable recollection.

ALBANIA.

Tirana, November 5.

The New British Minister.

Mr. W. E. O'Reilly, representative of Great Britain has been succeeded by Mr. William Seeds, who has come from Venezuela. Mr. Seeds has arrived in Tirana, and has presented his Letters of Credence.

British Officers.

In 1922, Colonel W. F. Stirling, on the recommendation of Mr. Harry Eyres, then British Minister in Albania, was nominated Inspector organiser to the Ministry of the Interior. Since 1925 eight other British officers, between the rank of Lieutenant-Colonel and Captain, have been summoned to Albania to organise and inspect the gendarmerie, all being under the direction of Colonel Stirling.

Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey Palestine, Iraq, and Persia.

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

Digitized by Google

Recently, however, for reasons of discipline, Colonel Stirling has left this post in order to devote himself entirely to the Ministry of the Interior, and he has been replaced by the retired English General, Sir John Percy, who succeeds him with a contract for three years. There is no question that this military mission can be of the greatest benefit to Albania if goodwill on the part both of the Albanian Government and of the British officers is displayed and the scheme taken more seriously.

Irregular Troops.

Since the present Government has been in office, that is, since the return of Ahmed Zogu, the Ministry of War has been suppressed, compulsory service has been reduced from eighteen months to six, and a corps of irregular militia has been created. This militia, as I said in my letter of September 4, formed an irregular force of about 5,000 men, and it suffers from many inconveniences. It was, therefore, necessary to remedy this defect. Towards this end the number of irregulars has been gradually diminished, and the whole corps was suppressed at the end of last month.

The soldier-militia (which were furnished not only with military but also with peasant kit) have been granted a small indemnity. Their chiefs numbered a hundred, with rank varying from Major to Lieutenant. Some of these have been retired—with monetary compensation; others, mountaineers, the more important, will continue to hold their rank and their appointments as if they were regular officers.

The irregulars are being replaced by regulars, whose length of service and number it will be necessary to increase. This suppression of the irregular troops has been hailed with universal satisfaction.

Sofia, November 4.

Parliament's Reopening.

The Sobranye opened again on October 28. This session being the last of the present legislature, King Boris personally declared it open. He read the traditional Speech from the Throne, which on this occasion was remarkably brief. He began by stating that "the help given (by the Deputies) in the efforts to maintain public order, lawfulness and peace in the country and the enlightened collaboration given to its enterprises with a view to improving the State finances as well as to the economic reconstruction and social appeasement of the people are bearing the expected happy results." The Speech continued: "Bulgaria is on good terms with all the (Balkan) States; our people enjoy the sympathies of the world abroad, which appreciates its qualities and its efforts. The consequences of the War are still a burden on the national finances and on the moral of the people; several questions await solution with the collaboration of the civilised world. Thanks to the kindly intervention of the League of Nations, Government has been able to record a valuable success as a start, though it may be but modest in comparison with the needs of the country. The authorisation for the conclusion of a refugee loan is a proof of benevolence and sympathy felt for Bulgaria by the Powers, who have speedily responded to the appeal for the raising of a mortgage on a portion of the State revenues, and who have consented to the formation of an international organisation destined to assure the stability of Bulgaria's exchange." In conclusion the Speech announces that Government will shortly present, for the approval of the Deputies, the contract for the refugee loan (when it will be signed) and a series of bills, the most important of which deals with the setting up of the refugees and the re-organisation of the National Bank. The latter project was one of the essential conditions for the authorisation of that loan, with an intermediate agreement between Bulgaria and shareholders of Bulgarian pre-War loans. The other projects are concerned more particularly with economic questions, which should constitute the main subject of the Sobranye's deliberations during this last session of their legislature.

The Establishment of the Refugees.

Now that the advance of the loan has been agreed to and the Commissioner appointed by the League of Nations, M. René Charron, has arrived—he entered upon his duties some weeks ago—the establishing of the refugees has actively begun. For this purpose a uniform plan has been elaborated by the Government and a special service has been created, the organisation of which is legally controlled and will be discussed by the Sobranye immediately after the elections on November 14, which for the moment are monopolising the entire attention of the Deputies. M. Charron has already distributed the necessary funds for the purchase of seeds and beasts of burden to the refugee farmers.

But a difficulty has arisen in connexion with the establishment of the refugees owing to the opposition from Bulgaria's neighbours in allowing the creation of new colonies, with the funds of the loan, in Bulgarian territory 50 kms. along their frontiers—that is, within what is called the prohibited zones. Owing to the lack of sufficient land, the Bulgarian Government ordered the suppression—at least partially—of these prohibited zones. As the Council of the League of Nations could not come to a definite decision when the question was raised during the September sitting and must deal with it again next December, it sent two delegates to Bulgaria to make an inquiry on the spot, with a view to presenting a comprehensive solution to the Council. These two delegates were Sir Arthur Salter, director of the economic and financial section, and Major Abraham, member of the political section. They had interviews with the President of the Council, the Minister for Foreign Affairs and the Minister of Finance, and were received by the King. They then made a tour of the country, visiting the border-Varna and Provadie in the north and Svilengrad, Ortakeuy frontier, that is to say more especially the regions of Varna and Provadie in the north and Svilengrad, Ortakeuv and Mastanli in the south, not being a "prohibited zone," a large proportion of the refugees could be usefully settled there.

The Salter-Abraham mission was also charged with the task of drawing up a report on the practical execution of certain of the preliminary conditions of the loan, notably the amendment of the statutes of the National Bank. The Bank obtained full satisfaction from the project which the Government introduced yesterday in the Sobranye, allowing them to give to the Press most encouraging assurances in regard to the prompt conclusion of that financial operation. Following these assurances the Minister of Finance, M. Moloff, left yesterday for London, whence he hopes to return in a fortnight, bringing back with him a signed convention in connexion with the issuing of the loan.

The Feminist Movement.

Recently a delegation of the Women's International

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Council paid a visit to Sofia, coming from Belgrade en route for Bucharest. The delegation consisted of the President, the Marchioness of Aberdeen, of England, the Treasurer, Mrs. Sandford, of Canada, and the Secretary, Mlle. van Eeghen, of Holland. These three delegates were the hosts of the Union of Bulgarian women, who duly fêted them and organised a large public meeting in their honour, at which all three spoke.

At this meeting, which was held in one of the largest halls in Sofia, Lady Aberdeen expressed lively satisfaction at the way in which the women of Bulgaria had developed the movement and the fruitful work which had been accomplished by the participation of women in the work of scholastic commissions, in the direction of primary and primary high schools, and especially in the care taken by Bulgarian women to assure the provision of physical and intellectual education for the children in the towns and villages. Lady Aberdeen also referred to the active part played by the Union of Bulgarian Women in rescue work on behalf of the refugees when they flocked into Bulgaria in a state of absolute destitution, exposed to the rigours of a severe winter. And she tendered the congratulations of the International Council, which has a membership of more than a quarter of a million women in forty countries of the world, and working, irrespective of politics, in a spirit of humanity and brotherhood, taking for its motto: "Do unto others as you would be done by." As a consequence the members were devoting their efforts to teaching the mothers.

Lady Aberdeen's speech was most successful. Mr. Sandford and Mlle. van Eeghen then spoke, explaining the details of the Women's International organisation, that first launched the idea of universal arbitration, which has now been adopted in all parts, and works in a sphere from which politics are wholly excluded, with the League of Nations, which the same day had been extolled by the Minister for Foreign Affairs in an eloquent electoral speech.

The visit of Lady Aberdeen, Mrs. Sanford and Mlle. Eeghen to Sofia has left a deep impression in Bulgarian women's circles.

English Concerts at Sofia.

On the invitation of the Bulgarian-British Association for the promotion of cordial relations the London Symphony Trio (Nicholas Roth—violin, George Roth violoncello, and Eric Whitehouse) visited Bulgaria and gave two concerts in Sofia under the patronage of the Minister for Foreign Affairs, M. Bouroff and the British Minister, Sir William Erskine. Their performances were much enjoyed by the public. This is the first time that English artists have given concerts in Sofia.

IRAQ.

Baghdad, November 3.

Parliament.

The Iraq Parliament, which has been in recess since June 14, was opened by King Faisal on November 1. The royal car, escorted by a squadron of mounted police and the royal bodyguard, with the officials of the Court and the Mayor and Mutasarrif of Baghdad, reached Parliament House at 10.30 a.m., where His Majesty was received by the Premier and his Ministers. The High Commissioner and the Air Vice-Marshal were present.

On entering the Chamber the King at once read the Speech from the Throne, and then retired. At the subsequent sitting the election took place of the Presidents, Vice-Presidents, and Secretaries of the Senate and the House of Deputies respectively. It was expected that the House of Deputies would re-elect its former President, Hikmat Beg Sulaiman, an ex-Minister of Interior; but the Opposition candidate, Rashid Ali Beg, was elected by 43 votes to 33. This was a severe blow to the Government, and the Prime Minister (Sir Abdul Muhsin Beg as Saadun), considering it to be tantamount to a vote of no-confidence, at once submitted his resignation to the King.

In connexion with the Speech from the Throne, it may be remarked that the introduction of a bill to inaugurate compulsory military service was announced. This is a question on which popular feeling runs high in Iraq. Other points in the speech were the consolidation of Iraq's relations with other countries, the spread of education throughout the country, and the progress made in irrigation plans for the protection of towns against floods.

Baghdad Tramways.

A tramway concession for Baghdad was obtained before the War by a Mr. Shabander, who subsequently sold it to a Turkish company, largely financed by British interests. After the War the concession was transferred to a British company, its terms undergoing many modifications on account of changed conditions in Baghdad. After protracted negotiations over these changes, the concession in its final form is now awaiting the approval of H.B.M.'s Government.

At this late hour, the residents of Baghdad have embarked on a heated discussion in the local Press on the merits of tramways as against motor buses, the opinion being strongly advanced that the day of the tram is over. The bus, which need not hold the middle of the road, but can make way for other traffic, is considered more suitable for the narrow and often congested streets of Baghdad. Nevertheless, although Glasgow and Manchester may be finding that the bus tends to oust the tram, neither of these cities experiences in winter a sea of mud of glutinous consistency as to make its main street almost impassable for wheeled traffic.

Iraq Railways.

Brigadier-General F. D. Hammond is expected shortly in Baghdad on a mission of investigation into the condition of the Iraq Railways. The Railways, taken over or constructed during the War by the British Expeditionary Force, are still the property of the British Government, but the terms under which they are to be handed over to Iraq are now under discussion, and the assessment of their financial value is understood to be part of General Hammond's task.

Baghdad Week.

The first Baghdad Horse Show is to be held on November 4. The capital will be fuller than usual, owing to the Polo Tournament which is being held in the same week. The twelve competing teams are drawn from the British and Iraq Armies, the Royal Air Force, the Iraq Levies, and the Iraq Police; several contain Arab members. The week ends with a fancy-dress ball on Saturday night at the Alwiyah Club.

ROUMANIA.

Bucharest, November 10.

The "National-Peasant" Party.

The fusion of the Nationalist and Peasants' Parties has at last been ratified, and a new "National-Peasants" Party has been formed, with M. Mihalache and M. Julius Maniu as its joint leaders. It remains to be seen whether the fusion of these two parties rests upon a firm foundation, such as a community of aims and ideas would give; at present their political points of view appear to the impartial critic to be too divergent.

The new party will be numerically strong, comprising the Nationalists of Transylvania and the large Peasants Party of the Old Kingdom and Bessarabia. It programme is proclaimed to include the following headings:—Measures for the encouragement of agriculture, e.g., the immediate revision of the methods of applying the Agrarian Law; the reorganisation of the Chambers of Agriculture; credit facilities for the Co-operative Societies; and inducements to foreign capital to participate in Roumanian industries. One of the most earnest aims of the party, however, according to a recent speech of M. Julius Maniu, is to raise the educational status of the peasants

Digitized by Google

who form 80 per cent. of the population of Roumania, and who are, generally speaking, a quick and intelligent people.

Distinguished Visitors.

His Royal Highness, the Duke of Spoleto, nephew of the King of Italy, accompanied by General Badoglio and suite, arrived in Bucharest on a State visit on Wednesday, November 3. The whole town was gaily decorated with bunting, and the Royal guests were accorded a most hearty welcome. On the day of his arrival the Duke laid a wreath on the tomb of the Unknown Soldier in the Park Carol, and then visited the Military Museum. The second day a Military Review was held, His Majesty the King of Roumania having come from Sinaia to welcome his Royal guest.

A large reception was held at the Italian Legation, attended by all the Diplomatic Corps and Roumanian notabilities. The Duke also went to see the Statue of the Wolf presented to Bucharest by the town of Rome twenty years ago as a symbol of the reationship between the two nations.

No hint has been given in the Press of the object of the Duke's visit, if such an object exists beyond that of cementing the *rapprochement* between the two countries begun by the recent loan from Italy to Roumania.

During the past week the National Council of Roumanian women has been busy entertaining Lady Aberdeen, who has visited Roumania in her capacity of President of the International Council of Women. A very successful meeting was held on November 2, when the speakers included Lady Aberdeen, Mme. Alexandrine Cantacuzino and Countess Martha Bethlen, who spoke representing the Transylvanian Minorities, and was given an enthusiastic welcome. It may be remembered that in a recent number the writer referred to the foundation, in Transylvania, of the Society of Romanian Women a generation ago, with a view to the protection of the Roumanian Minorities under the Hungarian rule, and to the good work of the Society at that time.

Yugoslav Alarm.

The Roumanian Press deprecates the alarmist rumours started by the Yugoslav newspapers about the danger of a war in the Balkans in the near future, and expresses surprise that the Yugoslav Press should abandon its usual accuracy in this connexion, as such a rumour appears to be totally unfounded.

The King has appointed the Rt. Rev. Alex Wood, O.B.E., M.A., Bishop of Chota Nagpur, to be Bishop of Nagpur in succession to the Rt. Rev. Eyre Chatterton, D.D., who has resigned. Dr. Wood served as an Army chaplain in France and Palestine during the War.

The King has approved the appointment of Mr. Harold Arrowsmith Brown to be a Puisne Judge in the High Court of Judicature at Rangoon in succession to Mr. Edward Dyce Duckworth, who will retire in January.

A special British delegation from Belgrade attended the opening ceremony on November 7 of the new orphanage at Nish, which has been built by the Serbian Relief Fund. Prince Paul and Princess Olga represented the King and Queen of Yugoslavia.

A memorial to Sir William Mackworth Young, a former Lieutenant-Governor of the Punjab from 1897 to 1902, was unveiled on November 7 in the south ambulatory of Lahore Cathedral. The memorial was unveiled by Sir Malcolm Hailey, the present Governor, and was accepted by the Bishop of Lahore at evensong.

A SIGNIFICANT CENSUS

There is a moral for every motorist in the following census figures regarding the fitment of

DUNLOP TYRES AT OLYMPIA

In standardising Dunlop Cord Tyres as original equipment on their cars, the car manufacturers give an obvious lead to every tyre buyer.

ALL CARS

DUNLOP TYRES fitted ...	1,835 ...	**61.02%**
12 other makes	1,172	38.98%

BRITISH CARS ONLY

DUNLOP TYRES fitted ...	1,412 ...	**93.02%**
3 other makes	106	6.98%

The moral of the Motor Show is—

fit Dunlop and be satisfied

DUNLOP RUBBER COMPANY LTD., FORT DUNLOP, BIRMINGHAM, ENGLAND. Branches throughout the World.

NEWS IN BRIEF.

A loan of £50,000 has been granted by the Palestine Government to the municipality of Tel Aviv.

King Fuad returned on November 13 from Alexandria to Cairo, where his Majesty was welcomed by Lord Lloyd, the British High Commissioner.

It is reported from Constantinople that the Angora Government have decided to adopt Latin characters for the writing of Turkish.

Husrey Bey, the first official Turkish representative accredited to Sofia since the end of the War, was received in audience on November 12 by the King of Bulgaria.

The Greek Government has conferred the Grand Cordon of the Order of the Redeemer on the Duke of Brabant, and has sent two Tanagra statuettes as a wedding present.

M. Henri Ponsot, the High Commissioner in Syria, returned to Beyrout on November 13 after visiting delegations who wished to submit demands and points of view. At Aleppo he receivel the Nationalist delegates.

It is reported from Bratislava (Pressburg) that M. Jean Millot, the French delegate to the International Danube Commission, on boarding a French vessel in the port, fell into the river and was drowned.

Brigadier-General Charles Prideaux Triscot, C.B., C.M.G.,, D.S.O. (late Royal Artillery), of Bryn-y-mor, Tenby, Pembroke, who saw much service in Afghanistan, where he took part in Lord Roberts's famous march to Kandahar, from 1912-16 Officer Commanding the Western Coast Defence, and who died on August 17, aged 69, left unsettled estate of the gross value of £5,312, with net personalty £4,969.

An extra Assistant Judge Advocate-General has been appointed in India in the military legal department, and the officer who has taken up the duties is Captain R. E. Banks, of the 2nd Battalion 11th Sikh Regiment. Major W. T. Fletcher, of the 3rd Battalion 19th Hyderabad Regiment has been transferred from the Eastern Command to be Staff Captain in the Judge Advocate-General Department.

The King has given orders for the following appointment to the Most Excellent Order of the British Empire in recognition of valuable and distinguished services rendered in connexion with operations in Kurdistan (Choarta-region) during the period June 6 to July 10, 1925 (to be dated June 5, 1926):—To be an officer of the Military Division.—Captain John Henry Gradidge, 10th Queen Victoria's Own Corps of Guides Cavalry (Frontier Force), Indian Army, Cavalry Instructor, Iraq Army.

The Roumanian Parliament was opened in Bucharest on November 14, with the usual ceremony, Marshal Badoglio being amongst those present. The King's speech, which his Majesty delivered standing, beyond a congratulatory reference to the excellence of Roumania's relations with England and other foreign countries, contained nothing important. After the ceremony the King returned to Sinaia, where the Queen of Yugoslavia had arrived for a short visit.

The Dowager Lady Goolbai Jamsetjee Jejeebhoy, of Bombay, India, who died at Bombay on May 27, widow of Sir Jamsetee Jejeebhoy, fourth baronet, a leading Parsee of Bombay, left unsettled property in India valued at Rs.176,286 and in England valued at £1,238, making at present exchange values a totol of £14,368. She left Rs.5,000 in Dharam (charity) for any purpose or purposes whatsoever in the discretion of her trustees for the benefit of Parsee Zoroastrians; Rs.1,000 each to her old servants Mareekji Hormasji Bilimoria and Shantaram Jagannath; Rs.500 each to her servants Ratanbai Sorbji Saratwala,, her Goanese boy Pavloo, and her ayah Marie.

President Masaryk left Prague last week for Egypt for a month's stay.

Unusually heavy and early rain has fallen in Iraq, promising a good grain season, but causing much damage to the railway lines. Nine breaches have occurred in the Baghdad-Basra line, one being 200 ft. long and 9 ft. deep.

Sir Thomas Haycraft, the Chief Justice of Palestine since 1921, will resign on reaching the age limit and will leave Palestine in January.

Sir Leslie Wilson, Governor of Bombay, and Lady Wilson were cordially received at Karachi on November 12 on their third annual visit to Sind.

It is reported that Abdul Khalek Bey, Turkish Minister of Finance, is taking action against the British Government for damages for his internment at Malta.

A tobacco merchant named Rechid Saadi Bey is suing the British Government for £400,000—the costs, he alleges, of the stocks of tobacco seized at his establishment during the occupation of Constantinople.

In view of the alarming increase of the drug traffic in Egypt, Russell Pasha, the Commandant of the Cairo Police, suggests that flogging be added to the existing penalties to which purveyors of noxious drugs are liable.

Sarwat Pasha, Egyptian Foreign Mnister and the Marquis Paterno, Italian Minister, on November 9 signed in Cairo the protocol covering the settlement reached as to the interpretation of the treaty of 1925 defining the western frontier of Egypt.

At the Wailing Wall, in Jerusalem, on November 7, Arab residents in the adjacent houses abused and pelted Jewish worshippers. Two of the previous week's assailants were brought before the magistrate and fined on November 8.

The decrease limiting the cotton acreage for the seasons 1927-29 to one-third of each holding will be one of the first measures submitted to the session of the Egyptian Parliament, which meets to-day (November 18). Limitation of the cotton acreage was one of the steps decided on to meet the present crisis in the industry.

According to a *Morning Post* Haifa report dated November 11, after M. Ponsot, the High Commissioner, had left Soueida, Abdel Saffah Pasha on behalf of the French proceeded to Mellah. A general Council of Druse Shaikhs has been called to discuss peace terms. M. Ponsot offered separate liberty to the Jebel Druse, who, however, insisted on the unity of Syria.

Mr. Joseph William Bhore, Secretary of the Department of Education, Health and Lands of the Government of India, will act as Member for the Department during the absence of his chief, Sir Mohamed Habibullah, who is going to South Africa to attend the conference on the position of Indians in the Union.

R.A.F. APPOINTMENTS.

The following appointments in the Royal Air Force are notified:—

GENERAL DUTIES BRANCH.

Air Vice-Marshals.—Sir E. L. Ellington, K.C.B., C.M.G., C.B.E., to Headquarters, Iraq pending taking over command (November 3); T. I. Webb-Bowen, C.B., C.M.G., to Headquarters, Egypt, pending taking over command (November 5).

Group-Captain.—F. W. Bowhill, C.M.G., D.S.O., to Headquarters, Iraq for Technical Staff duties (October 11).

ACCOUNTANT BRANCH.

Flight-Lieutenants.—C. H. Moore to Headquarters, Egypt (October 25); H. W. Capener to R.A.F. depot, Egypt (October 21).

ON SPELLING.*

By K. W.

There can be no one, be he scholar or pedant or merely student, with any pretence of love for literature, who does not know of that incomparable pair of commentators, H. W. and F. G. Fowler. Who that has consulted "The King's English" or "The Concise Oxford Dictionary" has not admired the graceful style, the honest blows, the deft touches, and the unfailing judgment shown in, so to speak, their running between the wickets? Now, alas, one of the pair is gone, victim of the War; and "H. W." alone is left to show us how our English language and our English words ought to be treated. He, however, contrives to put up a sporting game of single wicket, in this "Dictionary of Modern English Usage," for he not merely describes how the ordinary humdrum bowling should be played, but also indulges in some sly glances at the modern "speed merchant" and in some delightful "biffing" of the hodiernal and heretical googly professors. In other words, he ousts the journalist and the fashionable pedant, the former for his want of thought, the latter for his disregard of tradition.

Now I have amused myself by jotting down a few of the traps into which, according to Mr. Warde Fowler, we who deal with Oriental matters, choose to fall. It is true that no fury resembles the fury of the man whose spelling is infallible when it is remarked that he is wrong. The very sight of some words spelled in a particular manner drives strong men mad. Do they not tell, in the offices of THE NEAR EAST AND INDIA, of those Turkophils who cancelled their subscriptions when the Editor chose to spell Iraq with a "q" instead of a "k," and of the Englishmen who, knowing all about "Acre," thought a reference to "Akka" was a misprint for "Aqaba"? This affair of spelling is indeed one of the most fascinating and provocative of studies, and it is hardly probable that one's interest in it will decline when so accomplished a scholar as Mr. Warde Fowler comes along to stereotype what is in fact a constantly shifting thing. Possibly, of course, it is unfair to plug the ball down on Mr. Fowler's Oriental side, for so much more is known of the East than was known before the War, when, presumably, he fixed his spelling of Eastern names. But we will be so unsporting (he having scored so heavily and so handsomely in all that pertains to purely English words and language) as to start our attack at once. . . .

I looked up "Muhammad," I found the challenge direct: "See Mahomet." Excellent, I thought: now for it!

Mahomet, Mohammedan, etc. Before making any statement on these words, I asked a middle-aged lady whom she understood by the Prophet of Allah; she hesitated, suspecting some snare, but being adjured to reply said quite plainly that he was *Mahomet*, and further called his followers *Mahometans*, thus fulfilling expectations. The popular forms are *Mahomet(an)*; the prevailing printed forms are *Mohammed(an)*.

The worst of letting the learned gentry bully us out of our traditional *Mahometan* and *Mahomet* (who ever heard of *Mohammed and the mountain?*) is this: no sooner have we tried to be good and learnt to say, or at least write, *Mohammed* that they are fired with zeal to get us a step or two further on the path of truth, which at present seems likely to end in *Muhammad* with a dot under the h. The literary, as distinguished from the learned, surely do good service when they side with tradition and the people against science and the dons. *Muhammad* should be left to the pedants, *Mohammed* to historians and the like, while ordinary mortals should go on saying, and writing in newspapers and novels and poems and such general reader's matter, what their fathers said before them.

I have not quoted (reasons of space alone inhibiting the insertion of paragraphs of magnificent warfare) Mr. Fowler in full, partly because I want to parallel this dogged defence with Mr. G. K. Chesterton's similar defiance. Readers of "The New Jerusalem" will doubtless remember:

I am also aware that some are sensitive about the spelling of words; and the very proof-readers will sometimes revolt and turn Mahomet into Mohammed. Upon this point, however, I am unrepentant; for I never could see the point of altering a form with historic and even heroic fame in our own language, for the sake of reproducing by an arrangement of our letters something that is really written in quite different letters, and probably pronounced with a quite different accent. In speaking of the great prophet I am therefore resolved to call him Mahomet; and am prepared, on further provocation, to call him Mahound.

This is defence by attack with a vengeance; and can be countered only by those people, learned or literary (or even neither) who are aware that (1) there is no *e* in the Arabic language; and (2) that *Muhammad* does represent the exact sound which Muslims make when they refer to the founder of Islam. And that is the truth, the bourne of all spelling possibility.

A referring to the word *Caliph* caused interesting reading. Mr. Fowler has got it into his head (the Oxford English Dictionary having put it there) that orientalists now favour *Khalif*. So off he goes:—

The orientalist whom historians have made familiar with the *Khalif* is determined to cure us of the delusion, implanted in our childish minds by hours with some bowdlerised *Arabian Nights*, that there was ever such a being as our old friend the Caliph. . . . The one truth is that *Khalif* has a greater resemblance to Arabic than *Caliph*; is that of use to anyone who does not know it already? . . .

Here surely Mr. Fowler is a little hard, and also a little belated. For the reaction, even among those scholars whose niceties are regarded as niggling matters, has set in some time since towards *Caliph*. Such writers at once learned and popular, as Sir Thomas Arnold, for instance, never use any other form.

In the two examples that I have given, the problem of pronunciation is not capital, for no Mussulman could use, with the English pronunciation, the word *Caliph*. But here is an instance in which pronunciation very much matters. I refer to the word *Quran*. But hear Mr. Fowler:

Koran. The O.E.D. gives korah'n precedence over kor'an, and has no doubt chosen the winner. It quotes from Byron, however, *And less to conquest than to Korans trust*.

This seems to be perfect cowardice. Obviously Mr. Fowler prefers not only the wrong spelling, but also (and as a direct consequence) the wrong pronunciation.

But let us turn from Arabic words, in which a little learning is in Mr. Fowler's jealous eye a very dangerous thing. Yet we shall not fare much better at his chastising hand. I looked up *Tatar*. This I saw:—

Tartar, Tatar. The second spelling may well be left to the ethnologists. See Pride of Knowledge.

The which with gloomy frown I did.

Pride of Knowledge is a very unamiable characteristic, and the display of it should be sedulously avoided. Some of the ways in which it is displayed, often by people who do not realise how disagreeable they are making themselves, are illustrated in the following among many articles: a l'outrance, amuck, Army and Navy, averse, baluster, bedouin, course, different . . . Mahomet . . . moslem. . . .

The question resolves itself, you see, into the desirability of combining amiability in literature with the highest standards. If it be argued that contemporary usage provides those highest standards, well, then, let us be unamiable. And if Mr. Fowler, smiting free, would call us the "too docile disciples of the learned," why let him, by all means. He knows—for he realises that the chances of unity in spelling (that is, spelling in his way) are for ever gone—that the learned are the ultimate winner; and who shall deny a full rein to a man fighting so splendidly on the losing side?

When, however, Mr. Fowler puts himself on the correct (that is, our) side, there is no bowling in the world to upset him. Consult him, for example, on *mandatary* (noun) and *mandatory* (adjective), on *pundit, Eros, Sikh, Hebrew*, and so on. With most of these words and with many more he displays a most admirable sense of balance; nor does he allow his very considerable knowledge to weigh down or to expel his common-sense. I think the quality of the book is sufficiently indicated by the extracts which I have given. And, of course, I have treated this work from a most lop-sided and really unfair angle: judged in its broadest aspect it is, in fact, as I have already said, one of the most delightful volumes that have come from the "learned and literary gentry" of the Oxford University Press. Nor is it an unworthy memorial to Mr. Warde Fowler's younger brother, Francis George, who genius may have had no compeer, but certainly had its fellow. For love and labour have gone hand in hand in its making.

THE WEEK AT HOME.

London, Tuesday Morning.

The Armistice Silence.

Incomparably the finest thought that has occurred to Englishmen since the War is the two-minutes' Silence on Armistice Day. It is at once a reminder and an inspiration, a looking backward to those who died and a looking forward to the future of those whose existence so much depended upon the commemorated. At such a time the inexpressible gratification of Englishmen (or, rather, of Britons) becomes more ineffable, because of its unescapable religious tinge; and their pride becomes humbler and more profound.

There are still in this country—and such days as Armistice Day unmistakably discover them—those who are unmoved by the events of 1914-1918. To such a one, apparently, and he a Home Office official, it occurred to make a public statement of his belief that the time had generally come for the usual manifestations on Armistice Day of national sentiment to cease: it was suggested, particularly that "common-sense" might come into its own.

To the eternal credit of the Empire, however, the people showed plainly its choice between "common-sense" and "sentiment." The Silence this year was observed even more reverently than in previous years; everywhere the ceremony appears to have touched the core of the nation. By the Cenotaph, where, in addition to the usual Chiefs of our Empire, Imperial representatives were sharing in the common impulse, the service was indefinably impressive. As the maroon was fired, and Big Ben struck his awful hours, each stroke seemed to search and shiver the heart, as if it were meet to send out from the recesses of the soul some thoughts to those who rest in far or near lands, and whose like we never shall see again. To many a man and to many a woman the War won by those for whom the Silence is now kept is yet the central theme of their lives: events of the mere present are nothing to the undying memories of the Dead.

The Lock-Out Ending.

With the recommendation, narrow but decisive, of the miners' delegates that the Government's proposals be referred to the districts, the long struggle between the coal-owners and the men may be said definitely to be ending. It is estimated that the opinion of the men themselves upon these latest proposals will be known at the end of the week.

In the final negotiations the owners receded farther and farther into the background as representatives of a national interest, so that the Government was in the fortunate position of being able to come forward as the body really responsible for a settlement. The Government has specified a "standard agreement," with the offer of a national arbitral authority to which miners and owners could appeal. But these offers are so hedged round with conditions that it is possible to state that, apart from "face-saving," the owners have won hands down. The miners are beaten, completely beaten. But the truth is, that unless the Government were prepared to act on the recommendations of its Coal Commission, the miners never had a chance. It is lightly assumed in some quarters that prosperity will now attend not only the coal industry, but other industries also. Things may be so, so queer is the world of ours. But signs of such health are not visible to the ordinary man in the street (by whom, of course, one means oneself).

Politically, this long dispute is likely to be variously estimated. On the one hand, it is pointed out that the owners won all their main points—longer hours, lower wages, district agreements, ending of national agreements for at least three years, ejection of the Miners' Federation from negotiations, and so on—only because the Government were unwilling to intervene. And on the other hand it is pointed out that it was only owing to the Government's definition of the conditions of resumption of work that the end has been sighted. Even at the eleventh hour the owners were quarrelling with the Government. Whether the gain (in non-Tories) to the Government thus implied is greater than the loss (in high Tories) which its final intervention involved is a nice problem.

Liberal Party Funds.

A quite considerable part of the Liberals' troubles concerns that separate fund of that versatile politician, Mr. Lloyd George. That huge possession once more is the subject of bitter controversy; yet neither threat nor appeal can, apparently, induce the ex-Premier to use the funds rather for Liberal than for personal ends.

Some of the suggestions upon the correct use of this private fund are interesting. It is stated that the Liberal Party should never become a pensioner of this fund, but rather should exist on the voluntary contributions of the rank and file. Again, it is stated that the Party can rightly impose no conditions upon Mr. Lloyd George in his disposing of the Fund. These suggestions come, however, from his supporters in the House, and they are hardly likely, one thinks, to recommend themselves to those Liberals who see in the existence of separate funds within a party the negation of the democratic spirit. This particular dispute is probably the most miserable of all in the Liberals' latter and pathetically declining days.

The Fall of Park Lane.

The invasion of Commerce into spheres long held inviolable continues apace. Conquest of the Arts has been fairly thoroughly accomplished, but it is in the less abstract sense of conquest that people really begin to recognise what Commerce means. Country houses, country estates, even open country have been falling into the omnivorous jaws; and now—Park Lane itself is being devoured!

Stanhope House has been purchased by the Wakefield and West Riding Building Society. This great mansion in the "street of millionaires" is the first to fall before the apparently irresistible onset of the commercial men; and assuredly it will not be the last. The whole trend during the last fifty years has been towards the dispossession of the local aristocracy in London, but it is the post-War years that such rapid progress has been made in the substitution of Plutocracy for Aristocracy. The transformation of Devonshire House was a portent; and the commercial penetration into such places as Mayfair and Portland Place proceed fast. Yet there still are those who believe in Progress. . . . .

This news is seemingly of a piece with that which tells us that the Dyke Hills, the banks and the ditch across the strip of land where the Thames meets the Thame, are for sale. There is hardly an historic spot which is not subject to alteration in the changing times.

Queen's Hall's Future.

It is sad news indeed to learn that Queen's Hall may be turned into a theatre for the exhibition of films. But the lessees of the Hall, Messrs. Chapell, who besides doing an immense amount of harm to the cause of real music by the publication of numberless shop ballads, have undoubtedly been the means of allowing London to listen directly to music of the highest class, now state that, owing to the competition of broadcasting, the Hall cannot by concerts alone be made to pay, and that, being business men, they will let the Hall to the highest bidder.

If this comes about, and the Hall ceases to be the arena of Music, it will be at once a tragedy and a criterion of English taste at the moment. The whole trouble is, of course, that the musicians who are offended alike by the imperfect transmission by the wireless of orchestral music and by the constant singing of music of the "ballad" type are not sufficiently numerous or wealthy to stand out against the inferior trend of the time. That there is a case for the broadcasting of music is granted, but the most enthusiastic "wireless fan" would scarcely deny that orchestral and other music played directly into the ear also has its rights. This particular quarrel appears to have arisen from the fact that the commercialisers of two things, music and broadcasting—in other words, the concert agents and the B.B.C.—have come into conflict. And the larger and growing concern is winning, Art being naturally squeezed out in the process. I doubt, however, whether the Queen's Hall will really be lost to the cause of music.

A scheme is afoot for the obtaining of the Hall by a syndicate which proposes to introduce therein "popular dances"—by which is meant the placing of, say, Beethoven alongside Darewski. Better the Hall perish than that it should come to such a pass!

Cockney Speech.

The investigation of accents and of dialects is one of the most fascinating of studies. One is struck, therefore, by the statement, in a recently issued London County Council report, that each new generation of pupils in the Cockney schools (particularly girls) speaks more purely than the one before. It is admitted, however, that the young Londoner's gift of speech "offers the greatest resistance to educational forces."

This opens up an interesting argument. How far does education affect pronunciation? Does education cause a Scotsman or a Lancastrian, for instance, to lose the rich accents to which in youth he was accustomed? Or is it merely that a greater knowledge of words implies a greater capacity for mispronunciation? Accents, no doubt, change; but whether towards the normal and correct is another matter. In Victorian times, for instance, Cockneys had trouble with "w"s and "v"s. This particular difficulty has completely disappeared. Later than that, again, Londoners are reported to have put redundant "h"s all over the place. Nowadays they shamelessly and ubiquitously spill them. What causes these changes? Education? It seems doubtful.

ALTER EGO.

The legal code of Palestine, containing all the laws promulgated since the British occupation, is to be published next week. The volume is edited by the Attorney-General, Mr. Norman Bentwich.

Major-General Sir James Alexander Bell, K.C.V.O., late of the Indian Army, died on November 10, at the age of 70. He entered the Army in 1875, transferring from the 44th Essex Regiment to the Indian Army in 1879. He was appointed in 1910 General Officer Commanding and Political Resident at Aden, but relinquished the command in 1915 owing to ill-health.

THE GOBI DESERT.

Dr. Roy Chapman Andrews, leader of the Central Asiatic Expedition of the American Museum of Natural History, lectured, on November 10, to the Central Asian Society upon "On the Trail of Ancient Man in Central Asia," Sir Michael O'Dwyer being the Chair. With the aid of magnificent coloured lantern slides he gave a very vivid picture of the region north and north-east of the Altai mountains in which during the past few years the American expedition has been working. This expedition is equipped, not only with representatives of all the sciences pertinent to the particular research, but with all the technical equipment necessary to investigation over so large an area. One particular way in which, as Dr. Andrews pointed out, it had an advantage over previous expeditions was in its possession of motor-cars, which could do 100 miles a day: the camel ten. Naturally, the camel caravan had to take out supplies, and so on, for the actual expedition. It was hoped by means of this expedition, which would conclude its labours in 1929, to link up with the great work of Stein and Carruthers in Central Asia.

Apart from a description of the famous dinosaur's eggs (which the lecturer said pursued him like a ghost and could not be laid!), Dr. Andrews eschewed "dead" subjects and dealt with the living people of Mongolia. For the Mongols themselves he had a profound admiration. Physically, they were, he asserted, as fit now as when they won those amazing victories under Zenghiz Khan or Hulagu. They were never out of the saddle, and accomplished marvels on their horses. He instanced one fight in which 175 Mongols exterminated, with their quick wheeling movements, a camp of 3,000 Chinese soldiers. However, Llamaism was the curse of the country. Two-thirds of the people appeared to be priests, and while those living outside the temples were good enough men, the same could not be said for those inside. The Soviets were decreasing two things in Mongolia: the power of the priests (they had allowed no one to be appointed as successor to the Hutukhtu at Urga, who died in 1923); and the power of the old hereditary chiefs—they were making the Mongolian princes into ordinary citizens.

Next year the Americans hoped to go to the south of the Altais, where, as Sir Francis Younghusband subsequently pointed out, they might expect a much greater scarcity of water.

In the subsequent discussion Dr. Parker, of the British Museum, and the Chairman paid tributes to the remarkable power of organisation and endurance shown by this American Expedition in the strange land of high winds, mud, and hard rock that is the Gobi Desert.

A CORRECTION.

We regret that in our report of Captain G. J. Eccles' lecture to the Central Asian Society upon "The Sultanate of Muscat and Oman," the names of the officials to whom the lecturer was indebted for the use of lantern slides should have been transposed. It was of course, Mr. B. S. Thomas, not Mr. Bower, who should have been comprehensively described as "the Prime Minister of Muscat."

PERSONAL AND GENERAL

TO-DAY

November 18, 1926 (New Style).
November 5, 1926 (Old Style).
Jomada I. 12, 1345 A.H., of the Muslim Calendar.
Kislev 12, 5687 of the Jewish Calendar.

Lady Boyle has given birth to a daughter at 63, Queen's Gate, S.W.

Mr. Herbert Vandyk left London on November 9 in the s.s. Assyria for India.

M. Moloff, the Bulgarian Minister of Finance, arrived in London on November 10 from Paris.

Admiral Sir John de Robeck and Lady de Robeck are at present in residence at Lee, in Lanarkshire.

Madame Yovanovitch, wife of the Consul-General for Yugoslavia, last week arrived at 189, Queen's Gate, which is her address for the present.

Sir Muhammad Rafique, a member of the India Council left London on November 12 on three months' leave to India, which will be spent chiefly in Delhi.

Sir Dhunjibhoy and Lady Bomanji left London on November 12 for Bombay, and will return to The Willows, Windsor, early in April.

Lieut.-General Sir Charles Harington, General Officer Commanding-in-Chief, Northern Command, has consented to receive the Freedom of York.

Sir John Maffey was received in audience by the King at Buckingham Palace on November 9 upon his appointment as Governor-General of the Sudan.

Lady Blackett, wife of Sir Basil Blackett, Finance Member of the Government of India, was among the passengers who left India for England on November 6.

Owing to the recall of Jaafar Pasha el Askeri to Baghdad to be Prime Minister of Iraq, his lecture to the Central Asian Society arranged for yesterday was cancelled. The notes for the lecture will, however, be printed in the Society's *Journal*.

The Right Hon. Sir Herbert Samuel had an audience of the King at Buckingham Palace on November 8, when His Majesty invested him with the Insignia of a Knight Grand Cross of the Most Honourable Order of the Bath (Civil Division).

Sir Samuel Hoare, the Secretary of State for Air, and Lady Maude Hoare, leave Croydon on December 27, accompanied by one or two secretaries, in order to open the air route between Cairo and Karachi. They expect to be back in London about the middle of February.

Colonel Charles Clitherow Gore, M.V.O., of Stanhope Gardens, South Kensington, formerly a member of His Majesty Body Guard of the Hon. Corps of Gentlemen-at-Arms, an Indian Mutiny veteran, who died on August 13, aged 86, left estate of the gross value of £11,103, with net personalty £6,798.

UNIVERSITY OF DUBLIN. TRINITY COLLEGE.

The Professorship of Arabic, Persian, and Hindustani is now Vacant. Applications, accompanied by a detailed statement of qualifications and copies of testimonials, must reach the undersigned on or before Tuesday, November 30. The duties, which consist mainly in lecturing to Probationers for the Indian Civil Service, will begin on January 10, 1927.

The salary attached to the Chair is £250 per annum and the tenure is for seven years in the first instance, but the Professor will be eligible for re-election. Chambers in College will be provided.

G. WATERHOUSE,
Secretary to the University Council.

November 6, 1926.

Sir Alexander and Lady Kay Muir arrived at the Ritz Hotel last week from the country.

Sir Atul Chatterjee, High Commissioner for India, gave a dinner at Claridge's on November 8 to meet the representatives from India at the Imperial Conference. The company included the Maharaja of Burdwan, Mr. D. T. Chadwick, Lord Sinha, Syed Ameer Ali, Mr. Samuel, Sir James Parr, Sir Montague Barlow, Sir Arthur Hirtzell, Mr. S. N. Malfik, Sir Louis Kershaw, Mr. H. A. F. Lindsay, Colonel S. S. W. Paddon, Sir Muhammad Rafique, Sir Herbert Baker, Sir Campbell Rhodes, Mr. S. B. Billimoria, Lieutenant-Commander Hilton Young, M.P., Sir Stephen Demetriadi, the Mahraj Kumar of Burdwan, Major E. Wrench, Mr. G. S. Bajpal, Mr. N. C. Sen, and Mr. F. H. Brown.

Major Edward Keith-Roach, Assistant District Commissioner in the Northern district of Palestine, has been appointed Administrator of the Jerusalem district, which is to become a separate administrative centre.

Mr. L. D. Currie, the geologist of the Burma Oil Company, has been drowned while swimming at Yenang-aung, Upper Burma.

The death is announced of Major-General Sir Norman Stewart, Bt., at the age of 75. He served in the Afghan War of 1878-80, in the Nile Expedition of 1884-5, and after his promotion to Major-General in 1900 he commanded a district in India.

The death is reported from Delhi on November 8 of Mr. Hew Ramsay Waugh, as the result of a motor accident. Mr. Waugh joined the I.C.S. after the War, and last summer officiated as Deputy-Commissioner at Amritsar, where he gained great credit for his handling of the very dangerous situation when the Akali extremists tried to seize the Golden Temple. Mr. Waugh arrested the Akalis, and quelled the trouble without bloodshed.

Colonel George Grant Gordon, C.I.E., died at his residence at Richmond on November 12 at the age of 63. He took an active part in the volunteer movement among European residents in India, and rose to the command of the Northern Bengal Mounted Rifles. He served for some years as representatives of the planters on the Bengal Legislative Council, and was made a C.I.E. in the year of the Coronation Durbar, 1911.

THE GREEN HAT.

By JOHN HORNE.

In the selamlik of a modest house in the Turkish town of Sivas a young man stood reading aloud from a newspaper. The afternoon was hot, but his voice had caught nothing of its somnolence; on the contrary, every word seemed to increase its strength and importance, till the climax resounded with all the solemnity of an ultimatum.

"In the name of progress, it is no longer lawful to wear the turban or the fez, and any citizen failing to conform with——"

"Stop!" The cry was imperious. "Cease, I tell thee, and be still. No longer will I listen to these impious words—may Allah punish him who wrote them!"

Said laid down the paper with a sigh, and turned to the old man sitting cross-legged on the divan.

"Forgive me, oh my father, if I offend thee, but it is thus that the firmans of the Government are made known to us. The newspaper contains the law, the law of Angora—of our National Assembly. Besides, has it not been proclaimed from the Mudirieh that the ignorant will be treated at evil-doers? It is the new way."

Hajji Nour Ed Din passed his hand nervously through the straggling beard that fell like a grey waterfall over his breast, and stretched for the snakelike tube on the cushion beside him.

"The law! The new way!" he exclaimed. "May my ears be protected from such heresy!"

Said bent towards the narghileh, waving the paper gently above the little grey heap of ashes on the tobacco.

"It is cold. There is no more fire. Let me fetch thee some fresh charcoal." And, rising to his feet, he left the room.

The old man leant back wearily against the cushions, his thin bony hands inert before him. "May Allah keep fire for the giaour," he mumbled, "and damnation for those who stray from the true faith—the sons of burnt fathers!" And, after a pause: "May Paradise remain for ever closed to me if I wear aught but what my fathers wore before me! This civilisation of the West, of the unbeliever, has made our Government mad without being holy. So mad that they would deny us turban and fez, and make us wear—what is the name of the accursed thing, oh Said?"

"A hat, oh my father," answered Said from the doorway, a small pan containing red-hot charcoal in one hand, the crumpled newspaper in the other.

"A hat! A hat! An invention of Shaitan! Is a hat to bring us the civilisation they say we lack? In thy paper it is written that prison—perhaps death—awaits us if we conform not to this iniquity. Then, alas! that I should be alive to-day!"

Respectfully Said sat down beside the old man. "Oh, my father, speak not in this manner that fills thy household with fear! May Allah preserve thee, may He make thee live for a hundred years. Without thee, our garden were a desert—the light would be gone from our eyes."

"Some eyes are blind that have no wall of darkness in front of them," replied Hajji Nour Ed Din. "It may be as thou sayest, Said, but—I shall wear my turban, if Allah wills."

Said spread out the crumpled newspaper, seeking among the printed columns with his finger. "Alas," he muttered, "that our suffering should be so cruel!" Then, raising his voice: "Listen, father! At Erzeroum and at Rizeh men have been killed for crying 'Down with the giaours!' to those who wore hats. The paper says that such people prevent civilisation and progress."

"Progress!" cried the old man. "Such progress is the ruin of Islam and brings the malediction of the Prophet upon us all. Did not the holy Shaikh Satchili say as much to the Sultan Mahmoud, who had caused coins to be stamped with his effigy, and his portrait to be placed in every barracks? Padishah giaour! he called him—and was put to death for preventing progress. That was the beginning; and to-day they would take our turbans—for progress! But I will not do it—I will not do it!"

Said clasped his hands in despair. "Dost thou not know," he asked very quietly, "how dear is thy life to me and to my mother? Already notices are placed in the bazaar forbidding the use of fez or turban. The danger is great. How can we resist? Surely such things must be the will of Allah. One day even the muezzin who calls the faithful to prayer from the minaret, will wear a ——"

"Silence, worthless son!" shouted Hajji Nour Ed Din, trembling with rage. "Be assured that God will demand an account of this wickedness. Thou art blind, blinder than I—who can see nothing in this world. Shall I throw away my turban—I, who have made the journey that brings happiness—who have trodden holy ground and received blessings that show the way to Paradise? Those who give such counsels are infamous counsellors. To-day I go to the Mosque. Go, tell thy mother that my turban be ready."

Behind the door Fatimeh stood listening. Shrivelled and nearly as old as her husband, she still bore the traces of great beauty, and the devotion and love of fifty years still shone in her eyes.

"My son," she whispered as Said closed the door behind him, "we may yet save thy father from this danger, even by the burden of blindness that Allah hath put upon him. A long life does not deprive a woman of her wiles, and while I listened a way was made clear to me."

"Speak, oh my mother! There is no time to lose."

"Go quickly then," continued Fatimeh, pushing him gently towards the courtward, "to the shop of Habbak, the Jew. Thou knowest where it lies—beyond the bazaar, within a stone's throw of the mosque. There thou must buy two of the head coverings the giaours would force upon us, one for thee and one for thy father."

"But he will never wear a hat," interrupted Said. "His turban—have we not heard just now?—nothing but his turban."

Fatimeh shook her head. "Do as I say, and leave the rest to me. A woman may succeed where a man fails, and if we save the Hajji from imprisonment or worse, Allah will surely pardon the ruse."

Said settled his fez on the back of his head, perhaps for the last time, he mused, and turned into the street. He had almost reached the corner when his mother called

him back. "My son," she said, "let us not forget that thy father hath visited the holy places—buy a *green* hat!"

. . . . . .

To anybody intrested in the evolution of hats, the shop of Habbak would have been a gold mine of information; but unfortunately the citizens of Sivas entered it solelv with the object of replacing the head-covering they possessed by something nearer the letter of the law, and as cheap as possible. The latter was the difficulty. As his customers soon discovered, Habbak had not gauged the political atmosphere of Turkey for nothing. Even a corner in hats had its risks and deserved its recompense; and therefore protests against the price of old toppers, trilbys, boaters, and such like, fell on deaf ears.

It was a clear case of pay or go to prison, and Habbak knew it. Profiteer? Not a bit of it. Never was a more modest price, never a smaller profit—in the cause of progress.

To Said the quantity of forms was bewildering. Could these hats and caps—hard and soft—high and low—*all* be legal wear? Such latitude seemed incomprehensible. However, the problem had to be faced. For himself he chose a soft brown cap without much difficulty. The material felt like paper, but of course that was impossible, and in any case without importance. For his father the choice was a more difficult matter.

"I also wish a green hat," he announced.

A green hat? For a moment the Jew showed surprise. What could have happened to make these Muslims so particular? If he was to sell his stock, fashions of shape or colour could not be tolerated.

"This black is of better quality, and more national," he declared, holding up a broad-brimmed bowler of the 'nineties. "It is as worn by Kemal Pasha himself. Even this morning I sold one like it to the Kadi."

"I wish a green hat," repeated Said.

Habbak glanced at him sharply. Religious scruples, perhaps. That would mean a better price. And going to the back of the shop, he took a large paper bag from a shelf and proceeded to open it.

To describe the thing that met Said's wondering eyes is no easy matter. A hat it certainly was—and green, greener than the olive or the fig tree, or the leaves of the vine. From it rose a bunch of gay feathers, eloquent of springing chamois and bare-kneed hunters; its broad silk band cried aloud of mountain streams, and from its narrow brim the sound of distant yodelling seemed to exhale faintly. Tyrolese to the lining, it had seen Sivas and conquered.

"Behold, Muslim," announced Habbak solemnly, turning the treasure this way and that, "the only green hat I possess. For 800 piastres it is thine."

"Art thou sure that such a hat may be worn?" insisted Said. He felt incapable of serious bargaining, but hesitation might bring a reduction. "The law is difficult to understand."

"The law? There is but one law that counts—the law of progress and civilisation. Have not we Jews found a home in Palestine, which was once yours? Is not that progress? And do we not wear hats, even in our synagogues? Is not that civilisation? Your Prophet took much of his religion from ours, and therefore your Government is right to follow our example once again. I tell you, oh Muslim, the hat is not only a covering for the head, it is the symbol of progress!"

Said stood dumbfounded. Progress! Always progress! And how dear it was! 800 piastres for this shameful thing! 800 piastres to mislead his father! He felt as if he dared not do it. But already the Jew had enveloped the green hat in its paper bag and was holding it towards him. Quickly he laid the money on the counter, seized the parcel, and left the shop without raising his eyes.

. . . . . .

"God be thanked!" whispered Fatimeh, as Said reappeared in the courtyard. With rustling and tearings the bag gave up its treasure. "Allah Kerim! What a strange form! And these feathers—but perhaps they are a talisman against the evil eye, and will avert calamity. Go to thy father. In a moment I will join thee."

In the selamlik Hajji Nour Ed Din waited impatiently. "Is my turban not yet ready, oh Said?" he called. "I need no eyes to know that the hour of prayer approaches."

Said glanced nervously at the doorway behind him, but already Fatimeh had entered the room and stood holding the green hat gingerly by the brim.

"Have I not prepared it quickly for my lord?" she questioned, in a voice full of tenderness. "If my fingers are less deft than they once were, they can still press and fold—and the work had to be well done."

The old man shook his head. "I do not chide thee, oh my wife. Give me the turban."

"Nay, Hajji," replied Fatimeh. "Permit that I myself place it upon thy head. Never was such a turban, not even in Stamboul. My lord, my lord, raise not thy hands to spoil my work! Touch not its folds that follow each other like circles on the water! Thy turban will surely fill the men of Sivas with envy."

Said watched open-mouthed while the symbol of progress settled itself on his father's brow. The instinctive need to touch it seemed to have vanished as by a miracle. Fatimeh knelt and placed the old man's feet in his slippers, then rose and helped him to his feet.

"May Allah guide thy steps!" she murmured.

"And his blessing upon thee," replied Hajji Nour Ed Din. "Come, Said, I need no stick—thy arm will suffice. Strength hath filled me in the hour of danger, to teach a lesson to these makers of progress."

Said looked at his mother, but she only smiled. Her part had succeeded, and she ignored the true meaning of its success. His eyes returned to his father's face, calmly triumphant in its ignorance. Now that the thing was done he felt like a criminal, a giaour without faith. What was safety compared to this shame? Still, it was done—and what was done could not be undone. With a gesture of despair he pulled the soft brown cap from his pocket and put it on.

Thus it came about that two Turks, an old and a young, moved through the narrow streets of Sivas, beneath projecting upper storeys, under dark archways: and upon two heads a green tyrolese hat and a soft cap of doubtful material bobbed, from sunlight into shadow, and out again to the half-light of vine-covered trellis. Ridiculous? No. Pathetic? Perhaps, but certainly sublime—a lesson in uselessness, where there were none to learn.

For Hajji Nour Ed Din was not the only blind man in the streets of Sivas that day. Two reformers of their country—impeccably European in appearance—sat outside a café, discussing the blessings of Western progress and waiting for the fulfilment of their latest dream. No sooner did Said and his father appear in the distance than they nudged each other.

"Look!" exclaimed one. "Both age and youth conform to the new order. A green hat and a brown cap. Splendid! What a patriarchal appearance the old man has! For him it must have been difficult to break with tradition. And yet, you see——"

"The old-fashioned turbans and fezes were the curse of our country," remarked his companion. "Now we have progress! How proudly the fellow walks. Perhaps he is not so old as he looks. Well, it is a great day for them both—such strength of mind is admirable."

Meanwhile the green hat continued its way.

In his shop Habbak heard the call to prayer ring out from minaret to minaret across the town. "Civilisation is the gift of God—even if it bring but small profit," he reflected, glancing up to where the muezzin swayed black against the evening sky. Then, as two figures emerged majestically from the bazaar and paused on the threshold of the mosque to remove their shoes, "Hajji Nour Ed Din! With my beautiful green hat!" His voice rose almost to a scream. "I have been tricked—tricked like a mere Christian! It is infamous! Never will these dogs of Muslims become civilised! Hajji Nour Ed Din! I should have doubled the price of that hat!"

Book Reviews

THE ANCIENT WORLD.

"A HISTORY OF THE ANCIENT WORLD. Vol. I. THE ORIENT AND GREECE." By M. Rostovtzeff. (Oxford: Clarendon Press. 21s.)

The shelves of learned libraries are full of valuable monographs by men well qualified to write on the history of sections of the ancient world. To these writers we cannot be grateful enough, for the whole subject is too wide for the ordinary human being to embrace in the entirety of its detail. Many, too, have given us useful work in the way of compilations from such writings. But these have, almost necessarily, been mere compilations. When they stray beyond this limitation, they have been apt to run to fancy unguided by the stern law of history and have paid for being unreliable. The Cambridge Ancient History is in a class by itself. It is built up of very valuable monographs written by selected specialists and welded together by an editorial committee so as to form a consecutive history. It is written in considerable detail, no other plan could have worked so well to produce the desired result. It is not possible that any one writer could authoritatively treat all this detailed history. The method has, however, the disadvantage which must necessarily arise from the absence of a continuous and uniform narrative. It was, therefore, with a feeling of real excitement that we took up this book by one of the greatest living historical students who is attempting to depict the history of the Near East, Greece and Rome in ancient times in the compass of two volumes, massive volumes, it is true, but running in all to only about 800 pages.

Dr. Rostovtzeff begins with an essay setting out briefly but magisterially the aims and methods of writing history. He shows that, before a writer on ancient history can venture to take up his pen, he must be a master of many sciences. Philology, Palaeography, Archaeology, Chronology would perhaps be taken for granted. But equally necessary are physical geography and anthropology. He must have trained himself in the difficult problems of historical criticism, must be able to select from the mass of material at his hand and must be learned in psychology, specially that "of the herd." Nor must he forget that "history works hand in hand with the departments of scientific inquiry which have gradually become separate both from history and philosophy; these are the economic sciences, sociology, political and juristic sciences, and such branches of knowledge as literature and art, which bear upon man's spiritual life and the special products of his civilization."

"In close connexion with other departments of human knowledge, history tends to become more and more a science, whose end is to define the laws under which the life of man develops, and the regular process by which the one type of communal life is displaced by another. Nevertheless, history still remains a branch of literature, because the narrative of events and the lively and picturesque transmission of them, together with the truthful and artistic delineation of important historical characters, will always remain one of the historian's chief tasks, a task of purely literary and artistic nature. While becoming more and more a department of exact science, history cannot and must not lose its literary, and therefore individual, character."

We have dealt thus fully with the introductory chapter, because it supplies the key to the book. The author is master of the sciences, the necessity for which he lays down, and he never forgets that he is setting out to add to the literary riches of the world.

Instead, therefore, of a collection of trees, we are presented with the wood itself. Political history is by no means neglected, but it is given its place with social, economic, literary and artistic history. So while monarchs, soldiers, tyrants and democracies with wars and disturbances take their due place, they are not allowed to overshadow the other aspects of the great moving panorama of the progress of civilization. From the enormous mass of detail which he must have "at his fingers' ends" he selects with masterly ability and weaves the whole into a continuous narrative which the reader finds it difficult to interrupt.

In this volume we are given the history of Egypt and of the Empire of Central and Western Asia and the Ægean from the beginnings up to the full development of the Persian Empire, with special attention to their connexion one with another and the consequences of such connexion. Then follows the history of ancient Greece till the advent of Alexander the Great. We finish with the history of all these Powers under Hellenistic rulers and we leave the stage set for Rome. Roman history is to form the subject of the second volume.

When we have praised this learned, lucid and enthralling narrative and have given Mr. J. M. Duff, the translator, the credit he has fully earned, we have not done nearly enough. There remain the illustrations so liberally dispersed throughout the book. Of these there are no fewer than 36 illustrations and 89 extraordinarily beautiful photographic plates, which must represent more than 300 objects, each one of which is carefully described for us on the page opposite the plate. The task of selecting these pictures must, in itself, have been enormous. Very many of them are quite unfamiliar to the ordinary reader, and their "up-to-dateness" may be judged from the presence of an illustration from Dr. Breasted's very recently published monograph on the lost city of Doura on the Euphrates, which was reviewed by us at the time of its appearance. The technical excellence, too, of these illustrations leaves nothing to be desired. The picture-gallery is worthy of the book and the book of its picture gallery.

Dr. Rostovtzeff has good reason to be grateful to his publishers, the Oxford University Press, for their beautiful presentation of his monumental work. The only criticism which we felt inclined to offer is that the book is too heavy for comfortable handling; but, after all, a handy book would be one without the pictures, and, without the pictures, much of its value would be lost. How the publishers managed to give us this beautifully printed volume with its mass of expensive plates for one guinea, we do not know, but accept the fact thankfully.

C. S.-W.

PRAGMATIC BUDDHISM.

"THE ETHICS OF BUDDHISM." By S. Tachibana, Professor of Pali and Primitive Buddhism at the Komazawa-Daigaku, Tokyo. (Oxford University Press, 15s. net.)

Organised religions invariably develop an ethical side. In their earlier stages devotees are taught to regard belief in certain dogma and the performance of prescribed ritual as essential to happiness in a future state. But man is pre-eminently a social animal; his higher faculties come into play only in association with other men. Thus as civilisation advances, increasing stress is laid on the duties of citizenship. Professor Tachibana deals ably with the ethical aspect of Buddhism. Its Founder's career synchronised with an epoch when the religions of the Old World were assuming a definite shape. Pythagoras, Zarathustra, Confucius, and a galaxy of lesser lights had profoundly influenced men's outlook on the phenomena of Nature; the times were ripe for the advent of a great reformer. Brahmanism held sway in India, where the Buddha was born in the middle of the sixth century B.C. It was inspired by the Vedic hymns, which were composed between the fourteenth and the second centuries before the Christian era. The Vedic gods, deduced from Nature-Powers, were anthropomorphous and unmoral; "Karma" in Vedic eyes means religious merit accumulated by the performance of rites and sacrifices, in view of release from the dire necessity of undergoing a series of re-births into a world of sorrow. Vedic society was ranged in castes, in order to secure predominance for the "twice-born" Brahman, and to

Digitized by Google

segregate Aryans from "lesser tribes beyond the law." In later Vedic literature we find mechanical rites superseded by philosophic reflection, which took a far higher place than morality. But reformation was in the air. During that fateful sixth century Mahávira gave Jainism the form which it retains to-day. He broke away from Vedic authority, but retained the doctrines of Karma and Metempsychosis; his followers were enjoined to practise severe self-mortification and to respect life in every form. As Mahávira belonged to the Warrior caste, which ranked below the priesthood, we may regard his reformation as a revolt against sacerdotal authority.

The fact that the Buddha was a Warrior undoubtedly reacted on his doctrine. He was a determined enemy of Caste-distinctions, holding as he did that nobility depended on conduct alone. He declared that deliverance from the necessity of continuous re-births was to be achieved by purity, knowledge, and ethical action. He adopted and moralised the Vedic gods, but forbade offerings of praise, sacrifice and prayer, inasmuch as every human being must rely for salvation on his own unaided effort. We come into the world with a burden of ancestral qualities; it behoves us to reduce the evil and increase the beneficial elements in our heritage, until an equilibrium is reached which will ensure release from the woes of mundane existence. The Buddha's attempt to end the age-long controversy, Predestination versus Free-Will, is of especial interest. Although every contingency in life results from an endless chain of causes and effects, it is in our power to give a new and favourable orientation to the sequence of events. He had no message to give regarding life beyond the grave; his precepts were confined to conduct in this world of sorrow and trials. "Is there anything," asked Esslesiastes, the preacher, "whereof it may be said: This is new?" Many theories which startled the world by their apparent novelty were broached by the Buddha twenty-six centuries ago. He was clearly a pragmatist; he anticipated J. J. Rousseau by holding that "the human mind was originally bright but that it had been polluted by adventitious depravities." The germs of the latest political and scientific theories are found in the Buddha's gospel. Professor Tachibana's book appears at a time when ferocious class-selfishness threatens to destroy the whole fabric of civilisation. The world would be infinitely happier than it is if the Buddha's call for self-abnegation, self-sacrifice and social service were heard by the masses. F. H. S.

MINOS.

"THE ÆGEAN CIVILISATION." By Gustave Glotz. (London: Kegan Paul, 16s.)
"PRE-HELLENIC ARCHITECTURE IN THE ÆGEAN." By Edward Bell. (London: G. Bell. 8s. 6d.)

It is one of the most wonderful romances of modern archæology that we should suddenly have been put into possession of so much knowledge of a very ancient civilisation which, after flourishing for over a thousand years, has totally disappeared from knowledge except for tradition surviving in old poems and tales. Yet this Cretan civilisation was very highly developed. It was finally and utterly destroyed by the Dorians about 1200 B.C. and the world had to wait long centuries before many of its refinements were once more added to the store of human possessions. All knowledge of it was lost for over 3,000 years.

It was time that the ordinary reader should be put in position to be able to appreciate the facts discovered by, and to be gathered from, the work of excavators in Crete and other Ægean sites, of whom, of course, Sir Arthur Evans is *facile princeps*. The task is not an easy one and we are grateful to Professor Gustave Glotz, of the University of Paris, that he should have so sucessfully achieved it. Of course, with new discoveries taking place every year, it is not possible that any book of this nature can ever be completely up to date, but readers of it will be able to follow intelligently the accounts of new finds.

Professor Glotz shows us the Minoans as they lived. Their comfortable houses of two or three storeys with water laid on and efficient sanitary arrangements; their comfortable clothing with the surprisingly beautiful and modern costumes and head-dresses of the ladies; their games and sports; their trade; their agriculture and industries; their religion; their writing; their wonderful pictorial and plastic art; their architecture; their international relations are all dwelt upon in turn with a wealth of knowledge assisted by numerous excellent illustrations. Nor are the kindred civilisations which take their names from Mycenæ, the Cyclades and Thessaly neglected.

In the space at our disposal it is unfortunately quite impossible to do any kind of justice to this fascinating book, which no cultured reader can afford to neglect. The translation is good and the price wonderfully reasonable.

We wish that we could write as enthusiastically about Mr. Edward Bell's monograph on Pre-Hellenic Architecture in the Ægean. Both books are, in their nature, compilations from the work of others. But where Professor Glotz has mastered his authorities so thoroughly that he is able to write a book of his own, Mr. Bell has been content with much less. The pictures are good and interesting, but we fear that some of the information contained in the text is not as accurate as is to be desired. C. S.-W.

THE ROMANTIC DIPLOMAT.

"THE ROMANTIC DIPLOMAT. TALLEYRAND, METTERNICH CHATEAUBRIAND." By Maurice Paleologue. (Lonnon: Hutchinson 12s. 6d.)

M. Paléologue takes as the text of this clever essay Maadme Bovary's vision of the life of ambassadors, "a sublime existence on a higher plane than that of other people, somewhere between heaven and earth, amid the lightning," It is in this sense that the word "romantic" is used, and in this sense only could it have been used for Talleyrand or Metternich, though perhaps Chateaubriand may be held to have been "romantic" in the more usual sense as well. Anyhow, the late French Ambassador to Russia produces a most entertaining, human and readable book on these three personages, looked at from Madame Bovary's point of view. As history the book has no great value, as may be gathered from the fact that the name of Castlereagh hardly occurs in it. But it has its value, and the ironical wit of the author is eminently suited to the subject and its method of treatment.

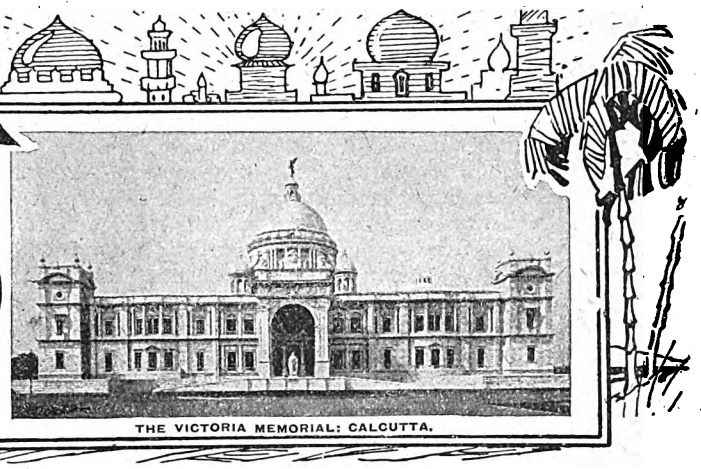
INDIA

THE GATEWAY OF INDIA: BOMBAY.



THE VICTORIA MEMORIAL: CALCUTTA.

THE NEW DYNASTY.

Lord Irwin's tour programmes seem to have been arranged on really practical lines, which is in itself a most refreshing departure from established practice. Vice-regal tours have generally, in the more recent past, appeared to the onlooker as little more than glorified joy-rides, whose main object has been sight-seeing and sport, with attempts—not always successful—at the cultivation of friendly personal relations with Princes as their secondary object, political considerations as their third, and the fostering of the interests of the peoples of India, commercially, industrially and otherwise, as an "also ran." Lord Irwin, in the short time since he went to India, has seen a great deal of the real India, and has not confined himself to inspecting its top-dressing. At the same time, he has not neglected the spectacular side of the Viceroyalty, which counts for so much with Oriental peoples, and particularly so in India. The great Durbar held at Lahore seems to have been a particularly impressive example of this: and his words on the subject were noteworthy. "In these days," he said, "when so many things are changing before our eyes, old-fashioned institutions, such as Durbars, are apt to fall into oblivion and disuse, yet to my mind the purpose and value of a public Durbar, such as this, remain. It gives loyal subjects the chance openly to show their loyalty to the King-Emperor, and it enables me, as his representative, to meet them and publicly to commend those who stood by the Government during the anxious years of war and through the subsequent troubles from which this Province is now emerging." It is interesting to note that, in these sentences, Lord Irwin followed, almost textually, the words used by Sir Michael O'Dwyer in upholding the value of the public Durbar at the time when its utility was challenged in a public speech delivered by Sir William Marris at Lucknow, a year ago.

Lord Irwin used a striking phrase on this occasion, when he said "A new dynasty has arisen, the dynasty of the people themselves." Recent years had seen changes destined perhaps to be more far-reaching in their effects than the old struggles and invasions which ebbed and flowed over the Punjab in days gone by. New powers and new responsibilities were now in the hands of the people, and it was their duty to use them with wisdom. This is, perhaps, looking rather far ahead; for, though the new dynasty has succeeded to the throne, it has not yet come of age nor obtained full ruling powers—it is still in the position of a minor Prince under a Council of Regency. In theory, no doubt, power is already passing into the hands of the peoples of India; but, at present, the only practical result has been to strengthen the hands of the professional politicians who are, in fact, much farther from truly representing the interests of the Indian masses than the "alien bureaucracy" which they lose no opportunity of denouncing. When the Viceroy spoke, for instance, of his pleasure at being able to commend those who stood by the Government during the anxious years of war, he most certainly did not address himself to the professional politicians—the men who publicly claim, in the name of India, that they should receive the rewards that the peoples of India earned in the face of their own indifference, if not opposition, generally passive, but sometimes even active. It has often been the duty of the British Government of India to nurse the patrimony of a minor Raja, in order that, when the time came for him to receive ruling powers, he should find himself the master of a contented, solvent and progressive State. This is its duty towards the new Dynasty now. Patiently and thoroughly, it must set itself to the education of the future masters of India's destinies, not only that, when the time comes, they may be able to use their power aright, but that, in the process, they may learn to strive for the betterment of their own conditions, material as well as moral, and so produce leaders from their own ranks who will take their proper place in the councils of the nation, while the professional politicians return to their briefs and their law-books.

England has been fortunate, above most other countries, in her possession of a class of rich and leisured gentry who, take to politics not as a profession, not as a game, but, with no axe of their own to grind, with the single idea of leaving things better than they found them. Lord Irwin is a conspicuous example of this class: a man of wealth, heir to a well-known title, he has no incentive to the pursuit of politics except as the means to an end which is in no way personal to himself, with a single eye to the public interest. And such a man has a special opportunity in India, standing as he does on an altogether different plane from the type of man who cannot forget his own personality and his own ambitions, as well as from the type that is content to remain a mere figure-head, and to leave others to rule while he goes through the motions of governing. India has generally been fortunate in finding public-spirited gentlemen of the type of Lord Irwin to fill the position of Viceroy: but the tendency of latter-day politics seems to be in the direction of bringing the other types, more especially the first to the front. It is a matter of specially good omen for the future that, in the present Viceroy, India should have found so conspicuous an example of the best type, who is indubitably a great gentleman, one who is not content to accept information at second hand, but who goes to the root of the matter and sees facts—and the real facts, not only the surface facts—for himself. Among the tasks that lie before Lord Irwin there is none greater than the nursing of the patrimony of the new Dynasty, in weaning its representatives from their apathetic sufferance of the loud-voiced demagogue, in teaching them to think, and eventually to act, for themselves. This task will not be accomplished in the time of the present Viceroy: but, if Lord Irwin's present activities are any guide, he is laying its foundations surely and wisely, and will hand over to his successor a State already far advanced towards the condition to which its present guardians must hope to have raised it when the time comes for them to hand it over to the rule of the new Dynasty.

THE LATE MR. WILLIAM KAYE.

"A. W. T." writes:—I hope that you will allow me to add something to the notice of the death of the late Mr. W. Kaye, which appeared in your issue of November 11. He was nearly the last of the Haileybury Civilians and a typical English gentleman, a keen sportsman and a capable administrator, straight and sound rather than brilliant, with plenty of common sense, patient equanimity and the saving grace of humour. He understood and appreciated Indians, winning their trust and affection. His opinion carried weight, and he was selected on more than one occasion for special duty requiring much knowledge and discretion, notably the chairmanship of the provincial Police Commission of the N.W.P. constituted about 1890. As a member of the Board of Revenue he paid more attention to general principles than to details, insisting that it was not his duty to do over again work which had been entrusted to the man on the spot; this was a departure from the existing practice, at any rate in revenue settlement. With his placid and kindly disposition, his unselfish sympathy and his inclination to make the best of persons and things he was a good friend and a pleasant companion. He had seen and heard much in his long life; he enjoyed telling his reminiscences to an appreciative listener with touches of dry wit to enliven his stories and comments. Although he never achieved great distinction he set a fine example. The motives which guided him were sense of duty and consideration for others. He was happy himself, and spread happiness round him. If the majority of men were like William Kaye the course of life would run more smoothly.

CURRENT TOPICS.

India and Burma.

For a considerable time past the idea of the separation of Burma from India has been in the minds of responsible Burmese; and it is worth noting that the same idea has now been voiced by the Burma Chamber of Commerce, on the occasion of the recent visit paid to the Province by Sir Basil Blackett, the Finance Member of the Viceroy's Council. In commenting upon the discussion that then took place, the *Englishman* (Calcutta) remarks that though, before the introduction of the Reforms, the connexion with India was hardly ever challenged in Burma, the progress of the reformed constitution has tended to make it increasingly unpopular.

For this there are three main reasons. The first is the growing Indianisation of the Indian administration, and particularly the growth of power and prestige of the Central Legislative Assembly. Burma feels that the impartial attitude of British officials, towards any conflict between her own interests and those of India, is in process of being superseded: which is particularly distasteful because one of her main objections to the Indian connexion is the fear of the introduction of Indians into responsible positions in Burma. The second is the matter of the Provincial contributions to the central exchequer: a sore subject in all Provinces, but specially so in Burma—who, it is asserted, received back from the central revenues only 28 per cent. of her contribution, compared with the average of 64 per cent. received by the Provinces of India. The third is the policy of protection of Indian steel, which has greatly increased the cost to Burma of the machinery so necesssary to the development of her important oil, mining and timber industries: for there is no local steel industry in Burma, and no foreseeable likelihood of her ever having one. An incidental grievance is the difficulty of communication with India: in connexion with which a demand was put forward for the laying of a submarine cable across the Bay of Bengal.

In his reply to the address of the Chamber, Sir Basil Blackett, while avoiding the main issue as much as possible, made the best of what strikes the observer as a bad case. On the question of Indianisation he had nothing to say—for, indeed, there is nothing to be said: so long as Burma is one of the Provinces of India; she will have to put up with the consequences, and the same is the case in the matter of the protective tariff in favour of Indian steel. As for the Provincial contribution to central revenues, Sir Basil said that every effort was being made to bring about the early extinction of all of these: he did not actually contest the argument that Burma got back less from the Central Government than the other Provinces of India, but stressed the advantage to Burma, in obtaining loans for her development, of being able to offer the security of India as a whole instead of nothing but her own individual credit. It is not unlikely that Burma has her own views as to how the credit of an independent Burma would compare with that of a separate India. Finally, in the matter of telegraphic communication, Sir Basil made a statement that seems, at one blow, to destroy the whole of his arguments in favour of the advantage to Burma of the continuance of the connexion. He said that the view of the Government of India is that the cost of a submarine cable would be prohibitive, unless the Burma Government were willing to guarantee the Indian Telegraph Department against loss. This seems to amount to saying that, in Indo-Burman matters where the interests of Burma predominate, India is willing to take action if Burma will find the money; but not otherwise.

The Cotton Industry.

The report for 1925 of the Committee of the Bombay Millowners' Association states that it has to record yet another year of heavy losses for the Indian textile industry. The year has shown a steady decline in the price of cloth: which at the beginning averaged 1-5 Rs. per yard, and 1 1-6 Rs. at the end. In the matter of indigenous production, the quantity of cloth produced in India during the year was, in round figures, 1970 million yards, compared with 1700 million in the preceding year; while India's export of cloth to foreign countries showed an increase of 16 million yards over that of 1923-24. The steady expansion of the mill industry is shown by the fact that the number of mills increased from 271 in 1914 to 337 in 1925: while, during the same period, the number of looms increased from 104,000 to 154,000, of spindles from 6¾ million to 8½ milion, the average daily number of hands employed from 260,000 to 368,000, and the approximate quantity of cotton consumed from 2,143,000 to 2,226,000 bales.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 28.

Cold Weather in the Air.

It was delightful to return home again at the beginning of this week, home to Calcutta that is, for the cold weather has made a remarkably early appearance and although we shall have some more spells of heat before December, we live in the present and bless our good luck. In the cold weather Calcutta's climate is a mighty pleasant one and, had it not been for the interruption of the War, a considerable tourist traffic would have grown by this time, and new and good hotels would have been built to accommodate it; as it is we are still hoping. There are no signs of the elections in the south of the City, and few in the north; the Bengali conducts these matters through the Press and by personal contact and the mass of the people are indifferent to it all. The Clubs are filling up and the incoming steamers are crowded: holidaymakers from the hills are coming back browned and fined down and the Light Horse are back from camp at Mudhapore. Tollygunge Gymkhana Meeting begins on Saturday and the Paperchase country is being closely explored for open courses to make up for those lost to the builders. A touch of anticipation, of excitement even, is in the air, and some of the new frocks from home are

Digitized by Google

already seeing daylight. The first whiff of the cold weather in the air is irresistible, even when we are still waiting to see that revival in trade of which you seem to have heard so much recently.

Communal.

So much for our community. In spite of the minor outbursts in the suburbs during the Pujahs, communal troubles amongst the Hindu-Moslem factions seem to be less evident. The beneficent effect of the Governor's drive around the Indian city is beyond denial, and it should be made a precedent for others at regular intervals. Sir Abdur Rahim, the Moslem leader, has written an unfortunately-worded letter to the Viceroy practically demanding that a temporary vacancy in his Council shall be filled by a member of his community, as the permanent incumbent is a Mussulman; he has since tried to explain himself away but he has been so castigated all round that the expected official snub may take the form of silence. The improved conditions outside Calcutta are typified in the tranquil atmosphere in which the Pujah processions passed by in Delhi; trouble has had a way of concentrating there and communal feeling has always run high, but this year, thanks to some preliminary talks and compromises, there were Hindus standing on the steps of mosques listening to the music of the passing bands. The Millennium is not yet, but this is an example to the rest of India of which Delhi may be justly proud.

The Elections.

The campaign has become almost entirely a matter of personal recriminations, and the only outstanding point of general interest is the fact that the Congress leader has taken to apologising for its record. This is probably responsible for the growth of a feeling that the Swarajists will be fewer in number in the Council than was at first anticipated; but no one seems to doubt now that whatever the label may be on the elected members in the next Council, the Reforms Scheme will be worked, and every boy will be very conscious of the coming of the Master in 1929 to examine the papers. *Forward* still beats a kind of non-co-operative drum, but it does not boom, and probably the underside is "bust." "The Congressman is a Titan, though only a Titan in chains. He may break down, but yield he will not. Crawl he will not for mercy. Bend he will not for boons. Battered, storm-tossed, failing, hoping, plodding, he yet holds his head high and smiles in silent contemplation of the beneficent Mother. Resist evil—that is the Congress ideal. Break all shams—that is the Congress cry. Fight on; on, for ever on." It is a pity the Congressman generally sounds and looks so much like a flapper in hysterics.

The Recent Assault Cases.

It seems a pity that the Government of India should have thought it desirable to dot the "i's" in the *communiqué* of the Bengal Government to the European Association in regard to the Spence case. They had nothing to add except their regret at the action of the Association; and another Government Statement has served to confirm the opinion of *Forward* and some of its fellows that the whole thing was a fake, organised and arranged by officials to enable them to issue statements showing their scrupulous fairness and care for the Indian. It is probably unnecessary to say that this was not the case, but it would be difficult now to persuade many Indians that the action of the Association was entirely independent and was taken in view of a very real danger which has become increasingly evident in recent years. All stars are not of the same magnitude and all magistrates are not equal, either in sentiment or judicial temperament; and if the action of the Association induces a habit of thinking twice before a man, European or Indian, is arrested and tried twice for the same offence, it will have served a very useful purpose.

India's Trade with the Empire.

The address of Mr. D. T. Chadwick before the Imperial Conference is made the text of a leading article by the *Statesman* pointing out that to give any preference to Great Britain would be against Indian sentiment at the present time. That this should be the case is largely due to the fact that it has always been a political cry to suggest that India is, and has been, exploited for the benefit of the English manufacturer. The trade circulars and pamphlets that issue from German sources have skilfully exploited this view and there is no doubt that they influence the mind of the bazaar trader more than a little. The *Statesman* recognises that it is too late to expect a change in Indian opinion in the matter of tariffs, but it rightly suggests that the time has arrived when, if protective duties are to be imposed, they should be designed upon some reasonable and general principle instead of being given spasmodically in accordance with the "pull" or the clamour of some particular industry. *Forward* has a column of muddled economics on Mr. Chadwick's address and disagrees strongly with his conclusion that the foreign trade of India is important and satisfactory. It works out figures to show that the actual amount of the foreign trade per head of the population is about £1 1s. 2d. and it proceeds to show to its own satisfaction that it would be far better if the present exports were retained in the country and utilised for the benefit "of the people." We have still a long way to go before the Indian Politician begins to get a glimmering of elementary facts in regard to the economic organisation of the modern world.

"Chiefs."

Sir Lancelot Sanderson was responsible for the introduction of a new word into the English spoken in Calcutta; it was "Chief," with a capital C. It has come to stand for the due dignity of one of the highest offices of the Crown in India, the Chief Justice of the Calcutta High Court, and in resigning it Sir Lancelot has the satisfaction of knowing that he leaves its prestige at the highest point. He has a remarkably fine presence and his cool judicial temper and invariable courtesy have set up a high standard of judicial quality in the Courts. Socially and in public life he has made his office universally respected, and he will be missed by everybody. Sir George Rankin, his successor, was made a judge eight years ago at the early age of 42, but he has shown an

Digitized by Google

efficiency and a strong sense of justice which make his claims undeniable; he has been a model judge. He has had a brilliant career; he served in the Artillery throughout the War; and he was a member of two important Indian Committees. The legal profession is already looking forward to an increased efficiency on the administrative side of the Court and his English reputation is shown by the following quotation from an intelligent anticipation of his appointment in a legal journal. "Sir George Rankin is intellectually without a peer amongst the occupants of Indian judgeships. . . . So long as the Indian High Courts can obtain the services of men so distinguished as Sir George Rankin the prestige of the English judiciary is sure to be well and worthily maintained."

Men and Things.

Keen interest is taken in the Press announcements in regard to the Connolly Project for a new line of steamers to Australia, which are to cut down the journey to India by five days, but at the same time there is more than a suspicion of scepticism in regard to the practicability of the idea. It is not likely that the existing interests would sit quietly while steps are being taken which would render most of the present fleets obsolete. We shall see.

Mention was recently made in these notes of the existence of a strong movement for total prohibition in Burma, and similar projects are not unknown in this country. We note from the cables that prohibition has been a failure in Norway, particularly havng regard to the large amount of smuggling that has come into existence since its institution. The fact that country spirit can be so easily made in this country would be certain to produce an enormous illegitimate industry if ever Government takes steps in the direction of shutting down the trade.

The new Wireless Company which has been floated in Bombay has been sufficiently successful for negotiations to be brought to a conclusion for the erection of a superstation in Calcutta. We now hear that it is hoped to relay programmes from England via Egypt, and if this were done it would be possible to hear the afternoon programmes from Home during the evening in Calcutta.

Calcutta is filling up again and amongst the people who have recently returned are Mr. A. Marr, Chairman of the Improvement Trust, and Mr. Stuart-Williams, the Chairman of the Port Commissioners. Sir Charles Tegart, the Commissioner of Police, also resumes his post in spite of the Press statements that he was not returning to India; is this a sign that things are really better here? Sir J. C. Bose has resumed work at his laboratory after a triumphal European tour. The Commander-in-Chief has been through Calcutta on his way to Assam where he is holding a series of military reviews.

His many Calcutta friends note with satisfaction that Sir John Maffey has been appointed Governor of the Sudan. So fine a presence and so able a Governor was a distinct loss to official circles when he took up a commercial post and there is nothing trite in his case in saying that the Empire cannot afford to lose men like him.

All the papers here have reproduced the photographs of Cobham's return and, by a curious coincidence, most of them select the one which shows him deprecating the fuss and the other which shows him kissing his wife; both practices worthy of encouragement.

There are far too many doctors in Bengal and it is almost impossible for the rank and file to make a living. Medical Missions and Charities make the agriculturist unwilling to pay for medical attention, and so the qualified men flock to the towns where the profession, like all professions, is already overcrowded; and yet there are 1,800 applications this year for the 120 seats available in the Calcutta Medical College. Bengal is suffering from over-population.

Government has invited expressions of opinion on a proposal to extend widely the facilities for elementary education in Bengal, the necessary funds being obtained by a small land tax throughout the Province. Although there are some 36,000 schools in Bengal at present, only nine per cent. of the population is returned as literate, not educated, and hitherto there has been a marked reluctance to submit to taxation for the purpose of educating the "masses."

The Trivial Round.

Racing starts again next Saturday with the autumn Gymkhana Meeting at Tollygunge and the course there has seldom been in such perfect order; it should be a most enjoyable function.

The M.C.C. have opened their campaign at Karachi where the honours were left more or less even against an Indian side; they have done better against a European team, but on the whole it looks as if there should be some very sporting fixtures by the time they have got their eye in.

Rangoon beat the representatives of the Calcutta Rowing Club who visited them during the Pujahs, and the Calcutta Swimming team was beaten in the water polo match although it did quite well in the racing. These visits will probably be returned—which is all to the good of the sports.

The Army in India Polo Fund has been well supported, particularly by the Maharajah of Jodhpur, who has lent his finest ponies to the team. The selections have been published and the team ought to make a good showing.

The Cricket Season has commenced although Calcutta and Ballygunge have not yet played any matches. A number of quite good new clubs have been started and it looks as if the game should flourish here more than ever; a good sign this, and a pleasant prospect for our Governor-to-be.

The mills have lost no time in getting ahead with their tennis again and the Gourepore League is well under way, with matches having been played throughout the Pujahs at practically every mill. There should be some new names in the Championship entries next year.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
London, Tuesday Morning.

Sudan Plantations Results.

As was anticipated an excellent report is forthcoming from the Sudan Plantations Syndicate, the net profit for the year ended June '30 last, after the transference of £28,000 to the general reserve, being £482,394 as against £162,885 for the previous year. This greatly improved result is due, of course, to the large increase in the area under cotton in the Gezira. The dividend is maintained at 25 per cent., but while last year's distribution only amounted to £150,000, this time it amounts to £375,000, as the capital is now £1,500,000 as compared with £600,000. The distribution therefore actually represents a very considerable increase in the dividend. The announcement is made that an arrangement has been come to between the Sudan Government and the Syndicate providing for an extension of the area and of the period of the present concession. To obtain these advantages the directors have agreed to various concessions, including a reduction of the Syndicate's share of the crop, full details of which are to be given at the forthcoming meeting.

Sudan Cotton Outlook.

On another page in this issue will be found the preliminary estimates of this season's cotton crop in the Sudan. It will be noted that the estimate of the output of Sakellarides shows a marked increase on the corresponding estimate of a year ago, the respective figures being 484,238 kantars and 307,100 kantars. As the actual yield for the past season was greatly in advance of the estimate it is reasonable to anticipate a very pronounced increase in production this season. The estimates as far as the Gezira is concerned—and that represents more than four-fifths of the Sakellarides crop—are based on a yield of 4 kantars per feddan, but the actual yield last season was 4.8 kantars per feddan, and this very high production will go far to counteract the effect of the low price of cotton that now prevails. The estimate of irrigated American cotton at 47,605 kantars is much the same as before, but there is a sharp fall in the estimate of rain-grown American, the figures being 43,140 kantars as against 62,500 kantars. Here Mongalla and Nuba Mountains and Kordafan show a substantial increase at 15,000 and 15,200 kantars as compared with 3,500 and 6,000 kantars, but the estimate for Kassala and Fung has declined from 20,000 and 19,000 kantars respectively to 2,670 and 1,670 kantars This fall is not to be attributed to the effect of the price of cotton, but to the shortage of grain and the rain shortage, food crops being given the preference over cotton. As I have pointed out before, however, the price of cotton is going to be a very important factor in the development of the cultivation of American cotton in the Sudan, and if cotton continues to be low progress will depend on the steps taken to counteract the detrimental influence of this factor on the grower.

Bengal-Nagpur Results.

At the meeting of the Bengal-Nagpur Railway Company Mr. Robert Miller, the Chairman, gave a most encouraging survey of the company's position. The gross earnings were Rs.14½ lakhs in advance of those of the previous year and were the highest on record, and in this connexion Mr. Miller pointed out that last year's total was swollen by abnormal traffic in rice due to the destruction of crops elsewhere. This traffic totalled Rs.25 lakhs, so the railway in considerably exceeding last year's returns has done very well indeed. The net earnings were Rs.315½ lakhs, which compares with Rs.204 lakhs. As regards the outlook, Mr. Miller was able to state that the earnings for 1926-27 are well up to those of the corresponding period of last year, and he expressed the hope that with fair weather in sight and good harvests generally expected there would be an improvement in earnings during the rest of the year.

Egypt-India Air Service.

The text of the agreement with Imperial Airways for the establishment of the new air service between Cairo and Karachi was issued this week in the form of a White Paper. The agreement, which is for a period of five years, provides for the establishment of a regular fortnightly service with three-engined machines in each direction between Egypt and India via Baghdad and Basrah for the carriage of mails, passengers, and goods. The maximum annual subsidy that can be earned is £93,600. Should this be earned in full in each of the five years, and should the cost of the ground organisation falling on the Air Ministry reach the estimate of about £65,000 over the whole period, the total cost of the scheme would be brought slightly above the figure of £500,000 mentioned in the Supplementary Estimate.

A Turkish Pipe Tobacco.

Turkish cigarettes may be said to represent an acquired taste like whisky and old masters and carmine political opinions, but whether it is possible to develop a liking for Turkish pipe tobacco must be a matter of considerable doubt. Residents in Turkey will soon be able to give a mature verdict on the question, for foreign manufactured pipe tobacco may not now be imported into Turkey, and, to fill the gap, the *Journal* of the British Chamber of Commerce of Turkey states, the Turkish Tobacco Regie is about to put a special pipe tobacco on the market prepared from a blend of specially selected Turkish leaf. This mixture is to be entitled "Tabac pour pipe, genre Anglais," which, while it may be a compliment to us as a nation of pipe smokers, might well have been withheld until those addicted to the "weed" had had an opportunity of passing their criticism upon it.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)
Bucharest, November 10.

The Budget.

Parliament reopens on November 13, and its first task will be to pass the Budget for the year 1927, which comes into force on January 1. There are rumours that the estimates represent an increase of 5 milliard lei over those of last year which amounted (without the Railways estimates) to 29.25 milliard lei. This is a large sum for the taxpayers to find, especially as the present State, urban, and commercial taxes are calculated to amount already to over 50 per cent. of income. A large part of this increase is said to be required by the Ministries of War, Communications, and Public Works for the raising of salaries.

Improvement of the Leu.

A fortnight ago the leu which had been gradually improving for some weeks, as is not unusual at the grain exporting season, created a sensation, and very mixed feelings among exporters and tradesmen generally, by reaching the figure of 800 to the £. In comparison with its extreme swing during the summer months, in the opposite direction, to 1,600 to the £1, this rise was disconcerting. It has been variously accounted for as due to lack of imports, large credits accorded to Roumanian banks by foreign banks, and the introduction of foreign capital for the Roumanian industries. Of the latter item, however, no particulars have come to the knowledge of the writer. The rate has now begun to swing back again and has reached 900, possibly owing to the advancing season and the possibility of the Danube being closed very shortly and to the comparatively small quantity of grain being exported. This latter circumstance is attributable to the shortage of tonnage and the exorbitant freights charged; the freights for England running as high as 38s. and 40s. According to Messrs. Watson and Youell attempts have even been made to ship grain by barque up river to Passau and Regensburg and thence over the German railways to Antwerp, the latter offering advantageous terms. This lack of tonnage is largely due to the coal strike in England. The prices of imported commodities even remain, however, at a high figure, and firewood has risen (owing to increased transport rates) from 11,000 and 12,000 lei per waggon to 15,000 and 16,000 lei per waggon. One can only hope, for the sake of the poorer section of the community, whose wages are far from adequate to cope with such an increase, that the winter will be a mild and short one. So far there have been few really cold days, and some days are still so mild that fires are unnecessary.

SUDAN COTTON CROP OUTLOOK.

The official preliminary estimate of the new season's cotton crop in the Sudan is given below together with the corresponding estimate and the actual yield of the past season (the figures representing kantars):—

Sakellaridis.	Area (Feddans)	1926-27. Estimate.	1925-26. Estimate.	Yield
Gezira	100,057	400,228	260,000	385,000
Tokar	27,000	27,000	25,000	9,500
Kassala	25,000	50 000	20,000	22,500
Shambatand	670	2,010	600	2,2[illegible]0
Kamlin.				
Private Estates	1,600	5.000	3,500	4.150
Total -		484,238	307,100	423.350
American—Irrigated.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 16.

The volume of business on the Stock Exchange in the past week has been small and apart from one or two sections, such as oil shares and some mines, which have improved, price movements have been irregular. The general rally which occurred at the end of last week on hopes of an early coal peace was not held and disappointment at the hitches in the negotiations was reflected in a fall in prices in several directions. On the whole, however, there have been no important changes and markets may be said to have been marking time pending a definite conclusion of the coal stoppage. Towards the end of last week there was a slight hardening tendency in the gilt-edged stocks, and Home Rails developed a slightly better tone. The script of the new Belgian loan has maintained the premium to which it rose last week, and is now well over. The rubber share market has been devoid of interest and in the absence of business prices have been inclined to sag. In the industrial section a little attention was devoted to iron, and steel and coal descriptions, but the amount of business actually being done is very small.

Preparing for a Boom.

The business world in general is beginning to seek an answer to the question :"What will happen when the coal strike is over?" Part of the answer is easy; part very difficult. When the mines are working again, the coal trade will doubtless meet with a powerful demand; for not only Britain, but also to a lesser degree the Continent, are denuded of stocks. Again iron and steel manufacturers have their order books packed with arrears of contracts. Something of the kind is true of engineering and on a smaller scale with a wide range of industries. When the strike is really over there is, in fact, likely to be for a short time a small edition of the post-War industrial boom, with a high level of demand and rising commodity prices. What does this mean for the investor and speculator? There are brokers who have for long been contending that the eventual end of the coal strike has been mainly discounted in stock exchange prices. At the same time; past experience suggests that the rebirth of optimism and the spectacle of renewed productive activity will impress itself to some extent on the course of quotations. Investors who have been holding back will come forward; and speculators will hunt for bargains. In the conditions that may arise there are just one or two points which the speculatively-minded should remember. Temporary, artificial, boom conditions lie ahead in some industries; but in many there have also been six months of heavy loss. Will the one balance the other? Different answers would apply to different industries. Again the lesson of speculators who were caught by the collapse of the post-War boom should not be forgotten. Moreover, a big speculative movement is most undesirable, for it would intensify the reaction that must follow when the immediate artificial causes of boom are removed; and against such a movement the country's financial authorities are likely to direct their policy.

The Rise in Oil Shares.

One of the features of the Stock Markets during the past fortnight has been the strength of oil shares. The beginning of the upward movement coincided with the announcement of an increased dividend and a share bonus by the Anglo-Persian Oil Company and the publication of a report which showed the Company to be in a very strong position. At the same time it is being realised that the prolongation of the coal stoppage in this country has been of increasing benefit to the oil industry, while thirdly, the statistical position of oil is stronger than for some time past. Crude oil prices are comparatively high—higher in fact than at the corresponding time in any year since 1920—which points to the probability that the purely oil producing concerns have been making big profits in the last twelve months. This appears to be the case with the leading Trinidad oil companies for example, which have increased their dividend distributons. We may, however, once again repeat our warning to the ordinary investor, who may feel inclined to invest a proportion of his capital in oil companies, only to purchase shares in the large and sound dividend-paying companies, such as Shell, Anglo-Persian and Burmah Oil. These are not purely producing companies, but are engaged in every branch of the oil business and therefore offer greater security to the investor.

A Plethora of Diamonds.

It is fairly well known that for years past the bulk of the world's diamond production has been controlled by the Diamond Syndicate of London. Some twelve or eighteen months ago a split occurred in the camp; it was followed by the organisation of the new Diamond Syndicate controlling about 90 per cent. of the total yield of stones. Thanks in no small degree to the operation of this Syndicate the De Beers Consolidated Mines—whose annual report has just been issued—was able to pay upon its £2 10s. deferred shares, for the year ended June 1926, dividends totalling 30s. or 60 per cent. The De Beers Co., of course, works a number of mines. During the current calendar year the outstanding feature of mining in South Africa has consisted in the expansion in the yield of diamonds from alluvial ground. These shallow deposits are exploited with simple appliances by individual miners or small parties, some of whom have made fortunes. Last month's yield of diamonds from alluvial is reported as having a value of £476,700, an increase of nearly £200,000 upon the result for the preceding period, and representing 40 per cent. of the aggregate for the mines of South Africa. To maintain its hold upon the trade, the Diamond Syndicate has been under the necessity of purchasing the bulk of the alluvial production. But if this expansion in output continues, the Syndicate may find difficulty in maintaining the prices of the stones at their present artificial level.

NEWS FROM ALL SOURCES.

The production of crude by the British Burmah Company and the Rangoon Oil Company for October amounted to 49,051 barrels.

The Bombay Baroda and Central India Railway Company announces the payment in January next, in addition to the half-year's guaranteed interest of £1 10s. per cent., an interim dividend of £1 10s. per cent. in respect of the company's profit for the year 1926-27.

We are informed by Messrs. Vickers Ltd., that they have received an order from Bibby Bros. and Co. to equip the motor vessels Dorsetshire and Somersetshire for service as Government transports.

Helbert Wagg and Co., Ltd., announce the numbers of 405 bonds, amounting to £47,540, of the Kingdom of Roumania Four per Cent. External Loan of 1922, which have been drawn for repayment at par on December 1.

The directors of the British Overseas Bank, at the meeting on December 7, will propose the payment of a final dividend of 3 per cent. on the "A" shares, making 6 per cent., less tax, and a dividend of 6 per cent., less tax, on the "B" shares for the year ended October 31, 1926.

INSURANCE NOTES.

The Origin of the London Fire Brigade.

One of the most interesting and important features of the Lord Mayor's Show was the engines, equipment and men representative of London fire brigades, past and present. As the powerful motor fire engines, replete with every appliance which science can suggest, and manned by highly trained crews passed, by in their splendour, it was perhaps difficult to help feeling amused at the primitive hand pumps, leather hose pipes and hooks which, in the hands of quaintly uniformed bands, protected the great city from "the mischief that happened by fire" in the days that are past. Still more surprising would it be to many to learn that the personnel and equipment which existed in those days were the direct outcome of private enterprise and effort.

It is actually 60 years ago that the passing of the Metropolitan Fire Brigade Act proclaimed an open recognition of the fact that fire fighting was rightfully the province of muncipal authorities. The existing equipment and staff which, under the regime of the insurance companies by whom it was maintained, had been brought to an exceedingly high state of proficiency, was, on the passing of this act, taken over without payment of any kind being asked for or made, and from this nucleus sprang the London Fire Brigade as it exists to-day. That brigade is, justly the pride not only of London's citizens, but also of those vistors from all parts of the world who study and adopt our methods for their own requirements. A tribute of gratitude is due to the survivors of those farseeing and indefatigable companies who, by their actions over 200 years ago made possible this truly wonderful development.

"In sixteen hundred and sixty six London burned like rotten sticks," runs the tag; and it was indeed the appal ling catastrophe of that year which brought into prominence at once the inadequacy of the fire-fighting appliances, and the necessity for organised bodies of firemen. As the immediate result of the Great Fire, various Laws were enacted making provisions for "engines, firecocks and leather pipes." Such appliances, however, were under the supervision of the parish churchwardens. No stipulation was made as to the proficiency of the persons detailed to use them; and, since rewards were offered to the first, second and third engine keepers to arrive at the outbreak, it not infrequently happened that, pending the issue of a free fight for precedence of arrival, the fire itself was ignored.

Such was the condition of London's protection from fire when, towards the end of the 17th ctntury, the fire insurance companies took steps to organise bodies of fire-fighting men, equipped in the best possible manner of the time. These men were recruited, appropriately enough, from the ranks of the Thames watermen. They donned uniforms, and by their distinctive colours and badges denoted the particular company employing them. They were well paid and were exempted by Queen Anne from the attentions of the "press-gangs." Under permanent foremen they were available at short notice, and although their services could be called upon in any case of fire, they existed mainly to quell outbreaks occurring in those buildings bearing the fire mark of their own companies. Such fire marks were in common use throughout the 18th and 19th centuries, and are still to be found, forming lasting emblems of the two hundred years during which the safety of the city in case of fire rested in the hands of the fire insurance companies.

Four of these institutions—incidentally the only four to have retained uninterrupted their individuality, were taking part in the pageant—Sun (founded 1710), London assurance (founded 1720), Royal Exchange (founded 1720), and Phœnix (founded 1782). Members of the present-day staff, wearing replicas of the uniforms which distinguished their colleagues of old, with the identical engines employed from one to two hundred years ago, had been chosen to illustrate the fire brigades of 1710, 1750, 1791 and 1832. Whilst these period representations of the old fire fighters and their antiquated appliances would cause a smile, they also compelled the grateful remembrance that the insurance companies for a period of two hundred years have actually provided, at their own expense, the best possible service procurable at the time for preventing and extinguishing outbreaks of fire, efforts that ultmately culminated in giving to the Empire's capital the world's most effective and most admired fire brigade as it exists to-day. The London Salvage Corps is solely maintained by the insurance companies.

TRADE DEVELOPMENTS IN ADEN.

A Growing Market.

Aden, the principal commercial centre of the Arabian Peninsula and the entrepot for the Red Sea markets of Ethiopia (Abyssinia), Eritrea, and Somaliland, had an excellent business turnover during the fiscal year ended March 31, 1926. This result came in part from the increased buying power in Arabia that followed greater output, and in part from the opening up of new markets in the region (says the American Vice-Consul at Aden, Mr. J. Loder Park, in a recent report). Although Aden trade has suffered somewhat by the increase in direct export shipping from Jibouti, Hodaida, and Massowa on the Red Sea, the number of ships using the port of Aden nevertheless shows a steady increase, according to figures in the report of the Aden Port Trust. Its importance as a fuelling point can scarcely be shaken, owing to its position halfway between Europe and the Orient and to its low prices for fuel, oil being imported free of duty and coal obtained cheaply from South Africa.

Althought the volume of total trade for the year 1925-26 did not equal that for 1924-25, it was considerably above that for both 1922-23 and 1923-24. Its closing quarter, January-March, 1926, was one of the record periods in the whole history of Aden trade. The quarter following, however, partly because of the competition of Red Sea ports mentioned above and partly because the Arabian and Ethiopian output of skins and coffee was much poorer than usual this year through lack of rain last winter.

The volume of Aden commerce follows a regular cycle, the January-March quarter being always the busiest. After March, trade slowly drops until June, reaches its lowest ebb in September, then picks up in the early winter, and comes back to its peak in January. The reason for this is the fact that the season for coffee and skins, the principal products of the district, lasts only from October to April; since there is no organized industry for either of these two commodities, the natives' buying power remains limited, and the volume of business in general, therefore, rises and falls with the season for coffee and skins.

The foreign trade of Aden for the year ended March 31 last was as follows (000 omitted):—1925 Imports Rs. 88,341; Exports Rs.73,790; Import surplus Rs.14,551.

Active Trade in Skins.

The skin trade of Aden is characterized by the keenest competition among local buyers. These merchants purchase from Ethiopia, Somaliland, and the Arabian hinterland, and sell to European and American buyers, so far as possible passing on to the native producers any losses involved in price drops. The general quality of skins in 1925 was poor because of the preceding dry season when the sheep and goats were scantily nourished. Producers were further handicapped by a 30 per cent. increase in freight rates on the Franco-Ethiopian railway in Abyssinia and by the interruption of communications in Yemen through military disturbances.

Rains in Ethiopia and Somaliland in the late summer improved the quality of skins coming on the market during the 1925-26 winter season. This was particularly important to the "chamois leather" industry, since production is dependent in the thickness and texture of the underskin of the goat hide from which the leather is made. In October, after the hunting season in Somaliland, Ethiopia, and Kenya Colony an unusual quantity of wild-animal skins was exported. On the whole, the 1925-26 season was one of the most active on record for both skins and hides, the United States being the leading purchaser of the former but an unimportant buyer of the latter.

Good Quality of Coffee Crop.

There is no lack of demand for any amount of coffee that Arabia and Ethiopia can produce, as it is used all over the world for a blending element. The American market in particular absorbs a very large share of the "Mocha," a name applied to coffee of various grades produced chiefly in the uplands of Yemen and formerly exported from the port of Mocha before the British occupation of Aden in 1840.

The 1925 crop was excellent, but was sent into Aden in such small quantities that prices remained high.. As a result the first of the new 1926 crop has been marketed in poor condition, because of the hurry to get the top prices; but there is every indication that the mature crop is of good quality and will be much larger than last year's. An increasing proportion is being exported to Italy direct from the Yemen district, via the port of Hodaida.

Cotton Textiles.

By far the most important item for local consumption is cotton piece goods, chiefly gray sheetings, of which enormous quantities are required by all the neighbouring countries. The big market is Ethiopia, which purchases almost entirely through Aden. American cotton goods, which once ruled this market to such an extent that all piece-goods were called "Americani," have now almost completely given way to the Japanese product of radically lower price. Indian textiles, likewise once important in Aden, no longer appear there.

An attempt has been made by some merchants to use American sheetings as a means of exchange to purchase coffee and skins from the natives, but this has not proved successful. The people of the region have not yet recovered their pre-War prosperity, and price is an important consideration to them. A slight downward tendency in American and British prices towards the middle of 1926 helped sales, but Japanese goods still dominate the gray sheetings market, and only comparatively small quantities of the finer grades of Manchester and American goods find purchasers in the district. Aden still remains the great distributing centre for the textile trade, as the smaller Red Sea ports have so far taken away little or none of it.

(To be Concluded.)

The Bank of British West Africa announces an interim dividend to September 30 at the rate of 4 per cent. per annum, less tax, payable December 1.

Cotton and Cotton Goods.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended November 10:—

Egyptian Futures.—Sakel Contract.—The past week has been devoid of outstanding features. Fluctuations throughout have been confined to a narrow margin and generally a steady undertone has been in evidence. Owing to current differences with the overseas market and the substantial discount at which we are running below spot values, our contract at the moment is failing to attract any fresh selling of importance, and on this account the gradual covering of short commitments has been sufficient to exercise a stabilising influence. The current position continues to show strength, but not quite so markedly as last week; the local stock of all varieties of Egyptian cotton stands at the abnormally low figures of 20,700 bales, only a very moderate proportion of which could be placed against this contract; were it not for the available supplies of tenderable Sudans (some 40,000 to 50,000 bales), Novembers would have quickly closed up with spot values instead of ruling at to-day's discount of 148 points. Manchester reports have latterly shown a steadily improving tone and revived hopes of an early settlement in the coal dispute contribute to create a more favourable view of the outlook; on the whole, spinners are purchasing more freely, but only for short date requirements. The Alexandria General Produce Association crop estimate cabled on the 5th inst. gives the yield of all varieties at 7,200,000 kantars, against the total crops of the two preceding seasons of 7,964,000 and 7,273,000; the lateness of the movement this year can be gathered from the fact that receipts are roughly half a million kantars less than the same period in 1925. Whilst prices may fluctuate round the present level for some little time, we consider that later on, when the markets run into weight of the movement, some easing will take place; on this account, we would advise deferring purchases for the time being.

Upper Contract.—With the exception of a short period prior to the publication of the American bureau report on Monday, when some hedge selling and long liquidation temporarily depressed values, this market has remained at a very steady level. Further reports of a shortage of the better graded American staple styles are coming to hand. The trade demand shows a slight improvement. We still consider that purchases on declines will eventually give satisfactory results.

Egyptian Spot.—Business in this department has continued on moderate lines only, and sales reported show but little increase over those of the previous week. Last week's advance has not been maintained and prices have displayed a sagging tendency, particularly for Sakellaridis cotton. In view of the latest American Bureau report, trade confidence in current values has again been shaken, and buying of Egyptian growths on the spot has been restricted to the irreducible minimum. The general inquiry has produced no new features and has continued merely on stereotyped lines. Bearing in mind the colossal size of the American crop and the apparent scarcity of actual business in Egyptian yarns, it is somewhat surprising that values have not slumped further, and the opinion is still widely held on this side that the bottom has not yet been reached. Early arrivals of new cotton, both Sakel and Upper, have given the impression that the staple of this year's crop has nothing to fear by comparison with last year's. A steady business has been done in Sudan cotton, chiefly in the Sakel variety, at from 100 to 350 points on. There has not been quite so much interest displayed in White Sudan, except by merchants, who have been picking up odd lots at bargain prices, from holders who have recently become somewhat alarmed at the trend of affairs. The Continent has recently been showing more interest in Egyptian cotton.

C.i.f. business on the whole has been quiet, but an improvement is looked for on the termination of the coal dispute, hopes of which are again running high. Forwardings to spinners for the week ending 5th inst. were returned as 3,000 bales Egyptian and 2,800 bales Sudan. Estimated sales, 1,100 Egyptian and 2,800 Sudan. Quotations of Sakel show a decline of 50 points and those of Upper 25 points. F.G.F. Sakel to-day, 14.80d. F.G.F. Upper to-day, 10.50d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended November 4, state:—

Since our last report the futures market has been less active, but the tone has been rather firmer. The week's summary of price movements is as follows:—Sakellaridis: November, 25.75 dollars, 0.55 dollars up; January, 26.65 dollars, 0.78 dollars up; March, 25.95 dollars, 0.87 dollars up; May, 26.20 dollars, 0.90 dollars up; November, 1927, 26.65 dollars, 0.73 dollars up. Ashmouni: December, 17.35 dollars, 0.15 dollars up; February, 17.70 dollars, 0.30 dollars up; April, 17.75 dollars, 0.20 dollars up.

Sakel.—The demand from abroad has been fairly good. The continuation of the coal strike in England and the consequent short time in the cotton mills is seriously affecting the offtake of Sakel; general opinion, however, is for a revival of the demand as soon as the strike is settled. Transactions in November contracts have fallen off considerably during the week and business is now concentrated almost entirely on January. November is now almost down to parity with January, and it would not be surprising to see November go to a discount. Arrivals of Sakel are daily increasing, and as any Government intervention in November contracts seems highly improbable it is only natural that these heavy arrivals should have a depressing effect on the near position. There has been no great speculative activity during the week. November new crop has been quoted for some time, but up to now very few operations have been registered.

Uppers.—This market has been fairly steady. The export houses have been large buyers, and the demand has been met by banks selling against financed cotton. Spinners' demand for Uppers cotton continues to be good and the bulk of the business on the spot market is confined to this variety. At the first November tender, 250 kantars dockets were issued. The week's receipts amount to 370,736 kantars, against exports 182,183 kantars; the stock stands at 2,047,076 kantars.

Spot: During the week under review we have had a series of fairly active markets, the demand from abroad being about the same as last week. Sales amount to about 28,500 bales, of which we estimate 11,200 bales Sakellaridis, 16,300 bales Ashmouni and Zagora, 700 bales Pilion, 50 bales Brown, and 250 bales White. Spinners' interest in Sakel is maintained, though Upper Egypt still attracts the greater part of the demand. In Sakel there is now a good selection offering, with the exception of the top qualities which are, by comparison, not abundant.

Sakellaridis: A fairly good business has been done covering all grades. Spot differences are generally unchanged except Fully Good, which is inclined to harden. Extra qualities continue in fair request at high premiums.

Ashmouni and Zagora: All styles have been in request and a good business has been done. Spot differences are firm and generally unchanged, except the grades above Good, which are a little dearer. It is to be noted that really high-grade Zagora of good character is very scarce, likewise the very best grades of Ashmouni.

Pilion: A good business has been done, though less than last week, in all grades. Spot differences are without much change.

Brown: A retail business has been done at about last week's differences.

White: Has met with a fair demand. Spot differences are cheaper for Fathy, but are maintained at about last week's rates for Casulli and the extra staple varieties.

Crop, 1926: Very little cotton now remains in the fields.

Digitized by Google

and in many districts the plants have already been pulled up. The interior movement is not nearly so intense as at this time last year; the banks have tightened up in the matter of advances against cotton, and the small merchants are accordingly doing very little. The Government, it seems, are now ready to make advances through the intermediary of the banks, under the arrangement outlined in our report of the 21st ult.

The report of the Ministry of Agriculture for October reads: The weather was favourable and helped the ripening and the opening of some of the remaining bolls. In Lower Egypt, the first picking is nearly over in all parts and the second picking is being taken. The picking in Upper Egypt is about to terminate. A good deal of cotton sticks have been uprooted everywhere for "Shitwi" cultivation.

COMPANY NOTES AND REPORTS.

SUDAN PLANTATIONS SYNDICATE.

The report of the Sudan Plantations Syndicate, Ltd., for the year ended June 30 last, states that during the year the area under cotton in the Gezira was extended from 20,000 feddans in the season 1924-25 to 80,000 feddans in the season 1925-26. Further capital expenditure was incurred and liquid cash resources for the time being show a corresponding reduction. The financial position, however, as shown by the balance-sheet remains satisfactory.

The Kassala Cotton Company's crop for the past season was unsatisfactory in quantity owing to the comparative failure of the Gash Flood, on which the extent of the cultivable area depends. The present year's flood, however, has been good. The operations of the Brazil Plantations Syndicate, Ltd., in which the syndicate is interested, suffered from drought in common with all agricultural undertakings in the State of Sao Paulo, and difficulties had to be contended with, inseparable from the initiation of a new enterprise, but the company hopes to have some 3,000 acres under cotton during the coming season. Since the date of the last balance sheet, the syndicate has subscribed at par for 100,000 shares in the Parana Plantations, Ltd., a company formed in November of last year to acquire a minimu marea of 2,700,000 acres of land in the North of the State of Parana, Brazil, and to open up and develop this land with a view to its disposal to settlers. The company's shareholding in the enterprise should in time prove to be of considerable value.

In the Gezira the cotton crop was good both in quality and quantity. The yield from the Zeidab property was reduced by unusually hot weather and attacks of insect pests. The various sub-stations formerly shown under the heading "Gezira" have now been merged in one unit and all the cotton produced in the Gezira is consequently shown under a single heading in the subjoined summary of the cotton crops handled during the past season. The corresponding quantities for the preceding year are stated as in the past, although, in view of the great increase of area cultivated in the Gezira, no comparison can be drawn:—

Zeidab	...	2,243 bales	...	2,814 bales.
Gezira	...	90,309 ,,	...	10,870 ,,
		92,652 bales.		13,684 bales.

Shipments of cotton seed from the Gezira amounted to approximately 35,000 tons and were disposed of at satisfactory prices.

Owing to unsettled trade conditions, only 21,156 Gezira bales and 825 Zeidab bales had been sold at the close of the company's financial year. The declaration of an interim dividend was therefore postponed until September, and the amount does not appear in the balance-sheet to June 30, 1926. The remainder of both crops is entered in the balance-sheet at a valuation made by the directors which subsequent sales have proved to be conservative.

An arrangement has been come to between the Sudan Govrnment and the Syndicate providing for an extension of the area and of the period of the present concession. To obtain these advantages the directors have agreed to various concessions, including a reduction of the Syndicate's share of the crop, of which full details will be submitted by the Chairman at the forthcoming ordinary general meeting.

The profit and loss account for the twelve months, after deduction of all outgoings, shows a net profit of £482,393 18s. 3d., which, added to the balance brought forward from last year, viz., £187,261 2s. 9d., brings the total credit to £669,655 1s. The interim dividend of 2s. per share (10 per cent.) paid in September last (less income tax) absorbed the sum of £150,000. The directors now recommend the declaration of a final dividend of 3s. per share (15 per cent.), less income tax, on the issued capital of 1,500,000 shares, payable on January 13, 1927, to all shareholders registered on December 13, 1926, £225,000, leaving a balance to be carried forward of £294,655 1s.—£669,655 1s.

NATIONAL BANK OF EGYPT.

Position at September 30, 1926, published in conformity with Article 8 of the Statutes. Company Meetings.

BENGAL DOOARS RAILWAY.

Damage Through Floods.

The thirty-sixth ordinary general meeting of the Bengal Dooars Railway Company, Ltd., was held on November 9 at the offices of the company, Gresham House, Old Broad Street, London, E.C.2. The Chairman (Mr. Robert Miller) presided.

The Secretary (Mr. F. J. Horne) having read the notice convening the meeting and the auditor's report,

The Chairman, in his speech in moving the adoption of the report and accounts, said:—You will, I trust, agree with me when I say that the results of the year under review are satisfactory, as although the aggregate gross earnings decreased by Rs.34,036, the balance of net earnings shows an increase of Rs.15,919 over the year ended March 31, 1925, which year I must remind you gave record receipts. The percentage of working expenses on gross earnings was 49.46 for the year under review as compared with 50.92 for the previous year, a reduction of 1.46. The net earnings were Rs.11,26,941, against Rs.11,11,022.

After deduction of Indian income tax (amounting to Rs.1,31,566) the amount of Rs.9,95,375 remains, which at the rate of exchange of 1s. 4d., equals £66,358 6s. 8d. This, with the addition of £10,216 5s. 6d. exchange difference on remittances, etc., £2,318 17s. 10d. interest earned on deposits, etc., and of the balance of £41,858 16s. 3d. brought into the accounts from last year makes a total of £120,752 6s. 3d. Of this the dividend on the preference stock absorbed £14,400 and the sum of £2,000 has been carried to reserve for income tax, leaving a balance of £104,352 6s. 3d. on the net revenue account. From this balance an interim dividend of 4 per cent. on the ordinary stock, absorbing £16,000, was paid on April 23, 1926, and £16,000 has been carried to reserve, leaving £72,352 6s. 3d. to be dealt with.

Before proceeding with the subject of the final dividend on the ordinary stock I have a few remarks to make about the floods which have recently been experienced in the Dooars and the consequent damage to our property since the close of the year with which the directors' report before you deals. You will remember that in my last address to you I referred to the erratic movements of the Daina and Teesta rivers, and pointed out that we must be prepared for possible heavy expenditure should either of these rivers during the flood season cut new channels which encroached upon our property. This year many districts in India have experienced exceptionally heavy rainfalls during the monsoon period, the district served by this railway being amongst them.

Until towards the middle of August last the Teesta River was reported as having straightened out and as "behaving very nicely," and it was hoped that the danger of flood damage during this year's rainy season would be avoided. On August 18, however, we received a cable that the river was rising, and on the 20th that our line had been breached at Barnes Junction on the previous day. From that date the river continued to rise, with the result that Barnes Junction Station buildings and the emergency line, which was constructed in 1916 and brought into use in July, 1923, were submerged.

The last report, which was received yesterday, from our manager is that erosion of the river bank is still continuing. He is taking every precaution by the construction of another alignment further east to guard, in case of need, against further interferences with traffic pending the construction of the permanent connecting line two miles east of Barnes Junction. The wet season is, however, practically over and it is hoped that the existing temporary diversion will not be interfered with.

I am glad to say that, in consequence of the prompt and active steps taken, the greater portion of the building materials, sleepers and rails were dismantled and saved from being washed away, and a temporary diversion line was constructed as soon as conditions permitted and opened for traffic, through running being resumed on October 4. Through traffic was actually only suspended for about six weeks, and during that period and pending the completion of this diversion a considerable quantity of goods was carried across the inundated area by coolies and lorries, and passengers mails and parcels were dealt with without interruption, all of which reflects great credit on Mr. Polwhele, our manager, for the masterful manner in which he handled the position.

Notwithstanding that a considerable tonnage of the normal goods freight has accumulated and will be carried later, our goods traffic must suffer, although it is thought not too seriously. With regard to passenger traffic, there has only been a small decrease in the numbers carried.

The loss of the emergency line necessitates the construction of another connecting line more remote from the flood area. A site about two miles east of Barnes Junction has been selected and arrangements made for the land to be promptly handed over. Our manager has been instructed to make the necessary surveys, prepare estimates of cost and indents for material required and construction work will be commenced immediately upon the termination of the wet season. We now await detailed reports and estimates from India. Previously to these floods we had for some time been in communication with the Secretary of State for India with reference to this subject, the result being that within two days of the breaching of the line a committee of Government engineers was on the spot and this committee approved of the steps taken by our manager and the proposed new retired line is in accordance with its recommendation. Information already received leads us to believe that the burden of the cost to the company can be met from the funds at our disposal, but we have nevertheless decided to continue our cautious policy, which, I think, you will agree has been fully justified, and not to increase the aggregate dividend and bonus paid for the year. The payment of a final dividend of 4 per cent. and a bonus of 2 per cent., making a total distribution of 10 per cent. on the ordinary stock, the same as last year, is therefore recommended, leaving a balance of £48,352 6s. 3d. to be carried forward, an increase of £6,493 10s. over the amount brought in from the previous year.

The report and accounts were unanimously adopted.

BENGAL-NAGPUR RAILWAY.

Record Gross Earnings.

Mr. Robert Miller's Speech.

The sixty-eighth ordinary general meeting of the Bengal-Nagpur Railway Company, Limited, was held on November 11 at Gresham House, Old Broad Street E.C

Mr. Robert Miller, the chairman, in moving the adoption of the report and accounts said that the gross earnings for the year were Rs.841,22 lakhs, which gave an average of Rs.572 per mile per week and Rs.6.93 per train-mile. That figure of gross earnings exceeded the corresponding figure of the previous year by Rs.14½ lakhs, or 1.76 per cent., and was the highest on record. That might not appear, at first sight, to be much to flatter themselves about, but when they considered that an abnormal traffic in rice, brought about by the destruction of crops elsewhere through floods, had contributed no less than Rs.25 lakhs to the gross earnings of the previous year, they would realise that the railway had, in fact, done very well in the year under review since it had not only made good the loss of that abnormal traffic which had disappeared with the next season's harvest, but had also exceeded the gross earnings of the previous year —themselves a record—by Rs.14½ lakhs. That satisfactory result had been largely brought about by improvement in the traffic in coal.

Passenger traffic showed an increase of 1,037,210 in total numbers carried, and of Rs.3.4 lakhs in fares received. Goods traffic, showed an increase of 276,479 in tonnage and Rs.3.22 lakhs in freights. There was a decrease in working expenses of 1.26 per cent., due principally to the expenditure in the previous year on track renewal having been abnormally heavy, and to the fact that, as a result of a fall in coal prices, less expenditure had been incurred on coal purchased for use on the railway.

Net Earnings.

The net earnings amounted to Rs.315½ lakhs, as against Rs.204 lakhs. In the preceding two years the return had been insufficient to

provide the full amount required for a 5 per cent. dividend on the ordinary stock, but in the year under consideration not only was the return sufficient for that, but they were able to carry over a small surplus of some £1,200 to the reserve, which now stood at approximately £92,000.

Coal was the principal commodity carried by the Bengal-Nagpur Railway. Of the 12,500,000 tons of goods transported in 1925-26 no less than 4,750,000 tons were coal. In those circumstances, they would appreciate the efforts which the directors had made in recent years to increase the supply of coal for commercial purposes by the construction of various lines. To-day practically all the fuel consumed by the railways and industrial concerns of India was indigenous coal, and it was hoped that under the stimulus given to it by railroad construction Indian coal would recapture many, if not all, its former markets overseas.

Another example of the fruit of their enterprise as a pioneer railway was that the establishment of the works of the Tata Iron and Steel Company on their line had been rendered possible some 20 years ago by the construction by the Bengal-Nagpur Company of a branch railway to the iron ore deposits and the carriage of the raw material required for manufacture of iron and steel at a low figure. The subsequent development of the concern had brought them considerable traffic. Another important industry in the development of which they had assisted was the manganese ore industry, in connexion with which further railway construction was in progress. Other new construction was the Vizagapatam harbour and its complementary chord, on which latter the work was being prosecuted methodically from each end. Its completion was designed to synchronise with the completion of the first instalment of the harbour, to provide a new and cheap outlet for the produce of the Central Provinces via Raipur.

The earnings of the railway for the year 1926-27 to date were well up to those of the corresponding period of the previous year. Excessive rain, accompanied by floods in some parts, had for the moment retarded traffic, but with the fair weather in sight and the good harvests generally expected, they might hope to see an improvement in earnings during the remaining months of the year.

Sir Charles Stewart-Wilson, K.C.I.E., seconded the resolution, which was carried unanimously.

The Cawnpore Electric Supply Corporation announces an interim dividend of 3 per cent. on the ordinary shares, payable November 23.

An interim dividend of 2½ per cent., tax free, on the ordinary shares is announced by the India General Navigation and Railway Company, payable November 26.

The traffic receipts of the South Indian Railway Company for the week ended October 16 amounted to Rs.9,74,207, making the total from April 1 Rs.2,85,50,418. For the corresponding periods of 1925 the totals were Rs.9,54,616 and Rs.2,92,23,394.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Syrian Throne.

In many respects the East has the advantage over the West; in none more markedly than in the selection of occupants for thrones, whenever one falls vacant or a new one is about to be created. Since the days of Bismarck the supply of suitable Kings in Europe has been almost as scanty as that of cooks in our own time. Not so in the East. When the Turks grew sceptical of the loyalty of the Grand Sharif Hussein they appointed ten years ago Ali Haidar Pasha, Amir of Mecca in his stead. The Grand Sharif, however, was destined to retain his charge of the Holy Cities for a little longer as King of the Hijaz. In 1920 it became known that a throne was about to be created in Baghdad. No one's claims to the post seemed to be urged more insistently than those of Ali Haidar Pasha, but it was the Amir Faisal who became King of Iraq. When finally King Hussein left the Hijaz, Ali Haidar Pasha was still available, but Sultan Ibn Saoud had other views on the subject. Fortune has now brought him yet another opportunity. A proposal has been put forward in Syria by the first of the insurgent leaders to submit to the French, and has received the French *imprimatur* by its official publication, that the only possible solution of Syria's ills lies in the adoption of the monarchical system of government, and it is suggested that none other is better fitted to become King of Syria than the Sharif Ali Haidar Pasha. If a King is to reign once more in Damascus, it will be of interest to watch how the French deal with the claims now advanced for Ali Haidar Pasha, Senior member of a clan claiming descent from the Prophet through his daughter Fatima, that supplied many Amirs of Mecca in the last four hundred years, Ali Haidar Pasha has equally strong personal recommendations. If the Syrians are fortunate enough to secure him as their ruler, they will have in their Sovereign a good man. If wisdom is applied learning, they will also have a wise one; for Ali Haidar Pasha has knowledge, both that which comes from the study of books and that which can be acquired only by one who has studied the world and the times in which he lives.

France's Dilemma.

The report that urges the establishment of a monarchy in Syria claims that the monarchical system of government is alone compatible with Muslim psychology and the Arab character. With equal truth the memorialist might have widened the sphere of his dictum and applied it to the whole of the Eastern world from the Adriatic to the Pacific. A number of countries are trying to prove the contrary, but few of those who have close knowledge of the East will doubt that sooner or later they will be compelled to endorse the confident assertion of Ramadan Pasha esh Shallash that "the republican system has proved a failure." Whether France can bring herself to accept a doctrine that is no challenge to the system, but only to its application to peoples differently minded and constituted from the mentality which is France's proud heritage is another matter. The French Government and people have taken seven years to realise that they cannot hope to administer Syria successfully by trying to force the Syrians into a French mould. Will they now, instead of continuing to ask the impossible of Syria, bring the mentality and resourcefulness of France to bear upon making a success of what Syria wants and the measure of loyalty to the Mandatary that the Syrians are prepared to give?

The Mandates Commission.

The British Government has followed up Sir Austen Chamberlain's comments on the recent procedure adopted by the Permanent Mandates Commission with a formal Memorandum on the subject. As already pointed out in

Digitized by Google

these pages, Great Britain's main contention, in regard to which she speaks also on behalf of the Dominions that are Mandataries, is that neither the Council of the League of Nations nor the Mandates Commission is called upon to check and examine every detail of administration. Only when the Commission has reason to suppose that the ideals lying behind the mandatory system are not being acted upon will it be justified in pursuing its inquiries and making such recommendations as it may consider proper for removing the particular abuses revealed. The Memorandum cites with telling effect the report of M. Hymans who, in 1920, as *rapporteur*, explained the limits of administration and legislation intended for the Mandataries. Accordingly the Mandatory Governments of the British Empire suggest that the unduly long questionnaire of more than two hundred and thirty items should be withdrawn for modification. A more delicate subject is the right claimed by the Commission to be accessible to all those who wish to support their written petitions by oral evidence. "It is not clear," the Memorandum states, "why the Mandates Commission should be unable to form a definite opinion on the sole basis of written documents as to whether certain petitions are well founded or not," and it goes on to point out that the Mandatory Power could always be called upon to furnish, or to obtain from the petitioner, such further information as the Commission might require to enable it to make a definite recommendation. Less convincing, perhaps, is the interpolation—which in the circumstances must be regarded as an unfortunate one—that the British Government, although receiving petitions from every quarter of the world, has never found it necessary to grant audiences to petitioners. To this statement the Commission, with a certain notorious occasion connected with Egypt in its memory, may be able to retort that it might have been better for all concerned if the British Government had granted audiences to petitioners sometimes. In view of the fact that distinctions cannot be made between Mandataries by the Mandates Commission, a reasonable compromise might be found in the stipulation that, whereas petitioners will not be allowed to present their petitions in person, they may ultimately be summoned before the Commission, if the latter thinks fit, after it has received the report of the Mandatary on the petition and if it is still of opinion that a round-table conference of Commission, petitioners and Mandatary is essential to the maintenance of the ideals of the mandatory system. The Commission would, no doubt, exercise this right in the knowledge that by so doing it ran the risk of committing *felo-de-se* or of having the Mandate returned to the League.

Turkey and the Soviet.

In more ways than one the Soviet Government has made it clear that it sets great store on preventing Turkey from joining the League of Nations. For all practical purposes the telegraph line between Angora and Moscow had been cut when the Turkish Government had found that the material advantages of Bolshevist friendship were rather rapidly exhausted. Then came, for the Soviet, Germany's defection in entertaining, and finally carrying out, the idea of admission into the League of Nations. At once the need for consolidating its hold on Asian peoples became paramount with the Moscow Governmnt, and under one pretence or another the telegraph line leading to Angora was restored. There is no desire in any quarter to blame Turkey for keeping on good terms with Russia; she would be most unwise not to do so. Her policy would be open to criticism only if, while claiming to belong to the comity of nations, she allowed herself to be committed to the Soviet policy of waging war, political or social, on every other nation. So far the Turkish Government's handling of the Russian problem has been correct. Tewfik Rushdi Bey went to Odessa, allowed Tchitcherin to inveigh to his heart's content against Europe, and said nothing himself. Up to the present, therefore, it is not Turkey's commitments to Russia that debar her from admission to the League of Nations, but the undue sense of her importance entertained by the Angora Government, which is not shared by the other nations of the world. There is profound truth in the saying which attributes happiness to the country that has no history. Turkey stands a better chance of attaining happiness, prosperity and eminence, if she is content with the sheltered position of an ordinary member of the League of Nations, than if she insists on trying to make history in the limelight, by imagining that she is entitled to a permanent seat on the Council.

Iraq and Its Army.

General Jaafar Pasha al Askari is to be congratulated on having established within such a short time a *modus vivendi* among rival parties in Iraq as to be able to announce the formation of a Coalition Cabinet a few days after his stormy passage by air from Egypt to Baghdad. The new Government is composed for the most part of Ministers with previous experience in office, including Yasin Pasha al Hashimi, a former Prime Minister, who is among the ablest of Iraq's politicians. What degree of stability a Cabinet, even of all the talents, formed in the special circumstances, will have the future will reveal. The necessity of passing the Budget will, no doubt, commend itself to all parties, and the first serious obstacle to be cleared remains the question of conscription. A correspondent in this issue enters a *caveat* against the idea that Iraq needs to maintain a standing army, and urges that a body of mounted troopers, a thousand strong, would be sufficient to keep internal peace and order. Mere theory divorced from practical knowledge of actual conditions is no safe guide in a matter of this kind. It is an axiom that Iraq would be ill-advised to attempt to create a military force that single-handed might be expected to cope with any forces put into the field by its neighbours. On the other hand, the country is extensive, and a mounted force a thousand strong, would not go far, if trouble threatened simultaneously from the south and in Kurdistan. There must be a golden mean between the two extremes, and we may hope that the united wisdom of the three parties, forgoing the desire to score a political advantage, will hit upon it, in consultation, no doubt, with the British military authorities.

Major-General James Cavan Berkeley, C.I.E., Indian Army, of Rosemount Road, Bournemouth, successively Resident at the Courts of Gwalior, Kashmir, and Nepal, and Agent to the Governor-General at Baroda, who died on October 12, aged 87, left estate of the gross value of £945, with net personalty £843.

THURSDAY, NOVEMBER 25, 1926.

GREEK REFUGEE SETTLEMENT.

Although public imagination was stirred, in the first place by the unprecedented migration of over a million Greeks from Asia Minor to Greece, and secondly by the manner of their absorption by a population not five times their number, it is only in the record of the three years' activities of the Refugee Settlement Commission that the full significance of the event for Greece can be appreciated. The League of Nations has done well, therefore, to give publicity to a Report from its Commission that supplies a comprehensive and detailed survey of the task involved in the settlement on the land and in towns of such a large aggregation of homeless and, where not destitute, improverished people. The main facts are widely known. In the autumn of 1922 Greece experienced the first invasion of those who fled from the catastrophe in Asia Minor, a tide, for the most part, of human wreckage, thrown up at her ports in complete disorder. The second invasion, of a more orderly character, comprised the Greeks who a year later had to emigrate from Asia Minor and Thrace under the Convention of Lausanne providing for the exchange of Greeks in Turkey and Turks in Greece. After investigation by special missions the Council of the League of Nations decided that the refugee problem could not be left for solution to the unaided efforts of the Greek Government without grave danger to the internal situation in the country. It was, accordingly, arranged that Greece should be provided with the necessary funds by means of an international loan, that the Greek Government should assign certain lands for the settlement of the refugees, and that a Settlement Commission comprising four members, two appointed by the Greek Government with the approval of the Council and two appointed by the Council, should supervise the settlement of the refugees, securing for them productive employment, agricultural or other, by using for the purpose the lands assigned to it and the funds placed at its disposal. By June 30, 1926, the total number of families established was 147,249, representing 551,939 individuals, and the Commission had spent 7,807,039 out of the £9,970,016, allotted to it. It was estimated that ten thousand rural families were still awaiting settlement, but the balance of the funds was required to finish the programme to which the Commission was already committed.

The Report pays a well-deserved tribute to the Greek Government and to the Greek people, both refugees and the original inhabitants, for the way in which they joined forces with the Commission in the work of reconstruction. There was an obvious effort to put forth of their best. Weak spots manifested themselves, it is true; but the story of three years' working reflects great credit on all concerned, when the exceptional circumstances in which the enterprise was carried out are remembered. The great majority of the refugees are settled, they are working and producing. Success in the future depends, as it should, on the efforts of the Greeks themselves. In many instances the arrangements made by the Commission have been necessarily of a provisional or makeshift character. Although the Greek Government has provided the amount of land stipulated, there is in many areas overcrowding among the refugees. The work of settlement had to advance simultaneously with the carrying out of agrarian reform, and under the scheme to which the Government was committed the distribution of land favoured the native peasants as compared with the refugees. This circumstance and many other difficulties incidental to settlement in a land where there is no cadastral survey and title-deeds cannot be issued have led to friction, with which the Commission has had to deal and which may tax the good will and resourcefulness of the Greek officials in the future. The problem of overcrowding is more serious, but the first steps towards meeting it have been taken in the drainage and reclamation scheme, already put in hand, which will render available much needed additional land.

The Commission makes no unjustifiable boast when it claims that it has been the means of producing a profound effect upon the political, social and economic life of the country. Greece has found room within her borders for a virile section of her people who previously could make no contribution to the material or moral advancement of the State, however much they they might stimulate the national aspirations in an unhealthy direction. A noticeable feature of the refugee settlements is the rapidity with which the co-operative movement has taken root. Old Greece, in contradistinction to her Slav neighbours, has shown no particular leanings towards this movement; the individualism of the Greek seemed for a long time to be a barrier even to ordinary business partnerships. The Commission calls special attention to the diffusion of co-operative ideas among the refugees. "It is," it says, "almost as if their common misfortunes and the desire to make good once more had engendered that confidence and spirit of corporate effort without which no co-operative system can succeed . . . . The co-operative system has been developed in this country mainly through the efforts of the refugee farmers themselves." In the economic sphere the early effects of the settlement of the refugees are already visible; peopling of the country districts, extension and improvement of crops, increase in natural production, both agricultural and industrial. In the capital, as in the provincial towns, new industries are springing up and trade is recovering, despite certain financial and fiscal difficulties. With the economic restoration has come also a moral regeneration; confidence is being restored to the country, where for a time dismay and demoralisation prevailed. The added man-power means ultimately an added sense of stability and security, of which Greece stands badly in need. If she so wills, she can accept what has happened as a fortunate dispensation of Providence and turn it to good purpose in the sphere of international relations. The root cause of the traditional hostility between Greeks and Turks has been eliminated at one stroke. Beyond, for the moment, Turkish suspicion, which may linger as a result of the Greek population left in Constantinople, there is little to prevent Greece and Turkey co-operating in the economic development of the Levant. The measure of security on her Eastern flank on which Greece could reasonably count as the outcome of such co-operation will add weight to her counsels in any Balkan federation. The first step must needs be the attainment of peace and political stability at home. It is unfortunate that that should appear to be the most difficult obstacle that Greece has ever been called upon to surmount.

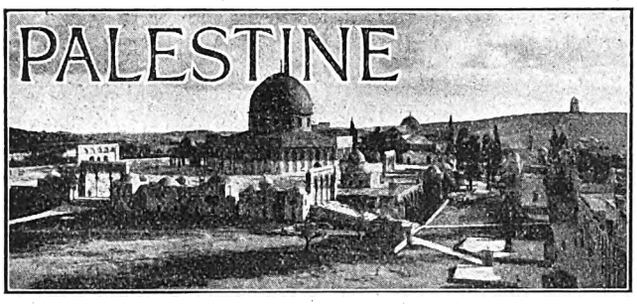
The Near and Middle East

From Our Own Correspondents.



Jerusalem, November 10.

The Municipal Franchise Ordinance.

The first measure of self-government for Palestine under the Mandate has been granted in the form of a Municipal Franchise Ordinance. The Ordinance determines the procedure and rules for the election of Councils of Municipalities, for the present twenty-two in number. The franchise will be enjoyed by all male Palestine citizens not less than twenty-five years of age, not being under a disability, and not having been sentenced to one or more years' imprisonment, and if paying taxes on real estate from ten shillings or municipal rates from £1 per annum. Voters not less than thirty years of age who pay double these respective amounts are eligible for election to the Council if they are not undischarged bankrupts, have no business connexions with the Government, and are not Civil Servants.

An Electoral Committee appointed by the District Governor will administer the election. It will prepare the Voters' Register and receive in the first place objections to omissions in that Register.

Where separate communities (Muslim, Christian, or Jewish) exist in any numbers, separate Registers for each will be kept and the District Governor will determine the number of Council members to be elected (not less than six or more than twelve) from the Registers in proportion to the number of voters thereon. Vacancies are to be filled from the same Register as that of the retiring or disqualified member.

Only one vote may be given to one candidate, who must be nominated by twelve votes, for a single Register—otherwise twenty. The High Commissioner may declare an election invalid, and petitions concerning undue election of a member may be made to the Supreme Court. The High Commissioner shall nominate an elected member as President of the Council.

The electoral law provides the usual machinery, but contains a number of features that may seem strange in Western eyes. In the first place, women are unconditionally denied the franchise. But although other countries have become familiar with female suffrage—at least in local administration—it was not to be expected that a Muslim and Oriental country would be favoured with such a measure of emancipation. The Jewish community regrets the withholding of representation from so active an element as its women, but it realises that it succeeded in obtaining the same right in their own Elected Assembly only after a long and bitter struggle. Moreover, the Jews may be consoled that in the purely Jewish Local Councils, including Tel-Aviv and most of the populous Jewish colonies, women enjoy full franchise.

Criticism is more widespread on the age limit (25 years) which is thought to be unnecessarily high. It debars a considerable number of the community who at a younger age are regarded as able to exercise with discretion the duty to vote. The English "majority" of 21 years of age would seem to accord far more with modern practice.

A serious situation is created by the rule limiting the franchise to Palestinian citizens (that is presumably nationals). Many Jews and non-Jews have so far failed to change their foreign nationality; some are not entitled to do so yet. It is urged in some Zionist quarters that since the Nationality Ordinance has been in force only one year and naturalisation is still attended with not a few formal difficulties, the municipal vote should on this first occasion be given to every rate-paying resident. If that is not conceded, favourable consideration—according to this argument—should at least be given to another alteration. The number of Council members should be determined not in proportion to the number of voters but of inhabitants; else in Municipalities with a large and even a major Jewish population (Jerusalem, Haifa, Tiberias, and so on) the Jews might be left with a very small representation—which would be unfair.

The Religious Division.

From another angle fault is to be found in the division of the population on a religious basis into Muslim, Christian and Jewish communities. The municipal suffrage is a political right, and is exercised, as one would think, in virtue of one's citizenship independently of one's religious affiliations. Some statesmen might not have preferred to introduce into civic administration a distinction which affects the private life of the individual but not his common rights and duties as an inhabitant of the town. Some individuals here, moreover, prophesy the danger that might arise from minority sects' claiming separate registers: this would mean a strengthening of the forces of disruption.

Finally, it may be mentioned that the number of Council members is curiously small—from six to eight. That might be a satisfactory number for an executive committee, but a larger body of city fathers—again according to a certain section of local opinion—should be entrusted with the general control of affairs. If Palestine is to be gradually educated to full independence—and as an initial step thereto this Ordinance is to be commended—scope should be provided for its public men to exercise their talent of management and constructive criticism. Since nominated Councils are at last to give way to democratically elected organs, the small conclave should, it is argued, be altogether abolished, and a wider platform provided for the discussion and elucidation of matters which touch the daily lives and interests of every person domiciled in Palestine.

Immigrants' Plight.

The financial situation continues grave—emigration is rising even above immigration. It is probably safe to predict an early change for the better when certain new undertakings get under way, such as Rutenberg's Electrical Works, the Haifa Bay amelioration works, the Haifa Harbour, the Jaffa-Petach-Tikvah Road, and so forth. But these may not be started for some weeks or months, and meanwhile with the winter upon us conditions are serious. Zionists are being called upon for special efforts, to meet the stringencies of a time when the towns are suffering from a temporary overcrowding of the labour market.

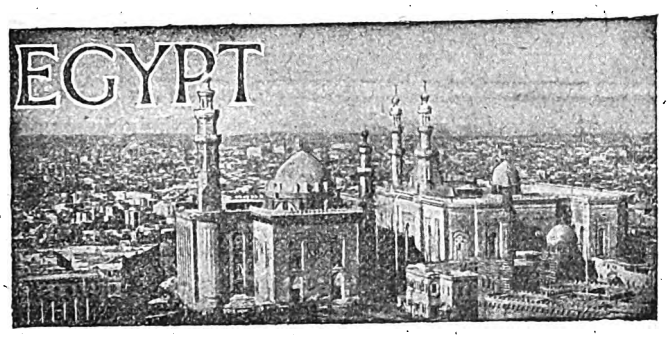
Communists in Palestine.

The resolutions of the Conference of the Palestine Communist Party (the "Fraction" which because of its association with Moscow is excluded from the Jewish General Workers' Federation) contain some interesting

Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey Palestine, Iraq, and Persia.

Digitized by Google

confessions. The Fraction cannot make headway, it complains. The Zionists, including the Labour Party, have a united front, against which it is difficult to inject the doctrines of revolution and opposition to "British imperialism." Dissatisfaction with unemployment is, therefore, to be turned to dissatisfaction with the Government. Among the Arabs greater success is expected because of their more fissiparous tendencies, and resolutions were adopted to strengthen the rivals to the present leaders who are "too timid." The Moscow representatives in Palestine have a sorry tale to tell their masters, who may well wonder whether their funds are judicially expended.



Cairo, November 13.

Armistice Day.

Armistice Day was celebrated in Egypt in what has become traditional fashion. In Cairo there was a Memorial Service at St. Mary's Pro-Cathedral in the morning which the High Commissioner attended and at which Bishop Gwynne delivered one of his simple and appealing little addresses, which are so characteristic of the man and have gained him such a place in the hearts of all who at any time have had the good fortune to be members of his flock. In the afternoon there was a solemn service at the British military cemetery in the presence of Lord and Lady Lloyd, General Haking and Air-Commodore Sampson, supported by a very large contingent from the Army and Air Forces and practically the whole of the British community. Archdeacon Lunt delivered an address, and at the conclusion of the service wreaths were deposited at the foot of the Cross until the whole of the base was completely hidden under the most beautiful floral offerings.

On an occasion like this one does not like to make any criticism, but just ground for complaint would certainly appear to be provided by the innovation in this year's programme which caused the "Last Post" to be sounded during the final verses of "Abide with me." The effect was positively hideous and jarred on every one's nerves. It is difficult to understand why the old practice of giving the "Last Post" separately cannot be adhered to. How effective the latter can be when sounded alone, had been shown that morning, when during the two minutes' Silence at St. Mary's Pro-Cathedral we heard the "Last Post" played at Kasr El Nil Barracks about half a mile away.

The Coming Season.

This past week may be regarded as from every point of view starting the winter season. The High Commissioner and Lady Lloyd arrived on Tuesday, looking none the worse for their experiences while crossing Italy, and were accorded a very warm reception. On Thursday the Government staff transferred from Bulkeley, and this morning King Fuad accompanied by the Ministers returned to Cairo. There is on all sides evidence that we are on the threshold of another bumper season. The advance bookings are unprecedented, and all concerned with the tourist traffic are rejoicing at the certain prospects of a profitable winter.

Not by any means so serene are the minds of those whose interests lie in the political arena. There is everywhere an atmosphere of uncertainty, accompanied by keen anxiety, and one can see from their attitude and restlessness that the Wafd and its more responsible-minded adherents are feeling that their conduct during the recent past may cause developments which are the last thing they wish to see. There is in the circumstances something pathetically humorous in the efforts which they are all making to put themselves right with Great Britain and particularly with the British Representative. No one is deceived by this sudden outburst of pro-British sentiment, and it merely serves to accentuate the impression one has been steadily gaining that, for the time being at any rate, the political leaders are completely dismayed by what they foresee may, in the near future, be the result of their policy.

The Economic Situation.

Meanwhile, the economic stress arising from the cotton position continues. The organisation of advances to the fellaheen throughout the country is complete, thanks mainly to the good offices of the National Bank of Egypt, and in order to give the utmost extension to the scheme the Government has authorised the Provincial centres to make advances independently of the Banks.

Reports from the districts show a quickening interest in the matter, and the Government staff is actively bringing the scheme to the attention of the cultivators and urging them to avail themselves of it. There are, however, symptoms that in their zeal to make the scheme a success in their own district some of the provincial staff are resorting to expedients the results of which are certainly not what was intended.

In various areas the cultivators in each village have been administratively marked down for specific quantities, and instances had been reported where a cultivator, who had no cotton available, was ordered nothwithstanding to produce the quantity marked against him on the administrative list, and proceeded to buy the necessary number of kantars for deposit against advance at the banks, in order not to get into the bad books of his superiors.

It is not difficult to credit these stories, since this is exactly what happened during the War in connexion with grain and other purchases for the Army, when rivalry between adjoining areas and zeal to please their immediate superiors repeatedly prompted Omdas and district officers to force cultivators to purchase outside large quantities of grain and bring them into the district in order that the aggregate total supplied by that district might be correspondingly swelled and possibly overtop the totals of adjoining areas. This is an illustration of the mental attitude of many of the members of the Provincial administrations and of the manner in which the agricultural masses are at their mercy.

Chrysanthemum Show.

This afternoon the Royal Horticultural Society held its Chrysanthemum show at the Semiramis Hotel. It was opened by the High Commissioner, who was accompanied by Lady Lloyd, and was very well attended, there being a quite large proportion of Egyptians present. The show was quite the finest we have seen in this country, both in organisation and quality of exhibits, and the Organising Committee deserve the warmest congratulations on the success which has attended their efforts.

Teheran, November 3.

The Shah's Trip.

The Shah has returned to town after his fortnight's tour in his native province of Mazanderan, where he owns considerable property. In the course of his trip he visited most of the towns there. On his second day out from Teheran rather a ghastly accident occurred to one of the motor-lorries accompanying him, which resulted in the death of some fourteen officers and men. The lorry apparently ran into a rock at the side of the road and the shock ignited the petrol and exploded the bombs and ammunition which it was carrying, killing the unfortunate occupants, who were literally incinerated in the subsequent blaze.

Attempted Assassination of Modarres.

Last Saturday the whole town was shocked to hear of the attempt on the life of Modarres, one of the most popular Deputies in the Mejliss in which he has been for many years the leader of the Clerical Party. This venerable old cleric, who is an authority on Islamic law, is respected as a fearless and witty speaker, and his words carry much weight in the debates in the House; it was chiefly owing to his opposition that the movement in favour of a Republic in 1924, which had all but succeeded, was rejected by the Mejliss and suddenly collapsed. It appears that Modarres was fired at by three men while walking in the street early on Saturday morning and hit in both arms, while his companion was also wounded, as well as a shopkeeper who happened to be present. The police succeeded in arresting two of his assailants, but the third managed to escape. Modarres was taken to the Government hospital, where he is progressing favourably, though, being an old man (he is about 70) he is naturally suffering from the effect of his wounds and the shock and loss of blood. He was during the course of the day visited by the Prime Minister, Cabinet Ministers, the High Clergy, and many Deputies, and a special session of the Mejliss the following day was held, at which all parties combined to eulogise the services Modarres had rendered the country, and the Deputies urged the Government to take immediate steps to discover the instigators of the crime, which appears to be of a political character. The Shah, on hearing of the outrage, wired to the Prime Minister expressing his concern and inquiring about Modarres' health, and the message was communicated to the latter by the Premier, Mustofi el Mamalek. The examination of the two men who were arrested has not yet elucidated matters.

The Rate of Exchange.

The sudden sharp rise in the rate on London during the past week, in sympathy with which the other foreign rates have also naturally risen, is the talk of everyone. The sterling rate had been rising gradually for the past year till a week ago, since when it has gone up by leaps and bounds and now stands at 45, the highest it has touched for some years, and the kran which a year ago was worth sixpence is now worth only 4½d. The rise is principally due, of course, to the recent fall in the price of silver abroad, as the currency is on a silver standard. In this connexion it is interesting to note that the Persian Government have just passed a law prohibiting the circulation of the rupee currency in the Persian Gulf, in which it has been recognised hitherto, and this comes into force in the middle of this month. The Government recently allowed the law prohibiting the export of gold and silver from the country to lapse, and after some months the prohibition has now been reimposed, and the relative bill has been signed by the Shah.

Relations with Russia.

It will be remembered that early in the year relations with Russia became rather strained owing to the embargo placed by the Soviet Government on all Persian imports. This, it was said, was a manifestation of their disappointment at not obtaining the Caspian Sea Fisheries Concession, which they naturally much coveted. When the Shah visited Khorassan this summer he sent the Minister of his Court, Teymoor Tash, who had lived long in Russia, to Moscow to negotiate with regard to these outstanding matters with the Russian Government. Reports have from time to time been received from Teymoor Tash on the progress he has made in this connexion, and these have been the subject of discussion by the Cabinet. A week ago the papers published a report from Teymoor Tash to the effect that a commercial agreement was being concluded in terms of which Russia would export annually to Persia goods (principally tea, sugar and petroleum) to the value of 35 million Tomans (some 7 million pounds) in exchange for Persian merchandise of a similar value, which would consist of cotton, wool and other products. The exchange would be effected solely in kind, and no cash would pass.

Military Conscription.

The Bill for compulsory military service is shortly to be put into force, and the town is at present placarded with notices giving the names of those men of the age of 21 who are liable to be called up, who are said to number about 4,000. Of these a certain number will be exempted for various reasons (and undoubtedly most of them will try to be!) and the rest will be drawn by lot, so that some 1,000 men are expected to be called to the colours in Teheran, and another 10,000 in the provinces.

Alleged Plot against the Shah.

A political trial which has now been proceeding for some time has aroused much interest, though, as it is being conducted in secret and the local Press, being still under strict censorship, is allowed to make no mention of it, it is difficult to obtain any details or reliable information. About a score of well-known people, including the Colonels of two regiments, were arrested, on a charge of complicity in a plot against the new dynasty aiming at the assassination of the Shah and Crown Prince and the setting up of a new Government, for which the plans are said to have been all cut and dried. The result of the trial is not yet known.

General News.

A Bill for the engagement of twelve American and German engineers in connexion with railway construction has been submitted to the Mejliss, as also that for the engagement of a Belgian official as Director General of Posts. This latter appointment is bitterly opposed by the Persian papers, but having experienced the rather inefficient way in which the postal administration has been run during the last two or three years since the last Belgian official's services were dispensed with, most of us look forward to the re-instatement of a European to control this important section of the public service.

One of the local papers waxed sarcastic in an amusing article the other day with regard to the Municipality and

asked what it is doing to better conditions in the town. "Look," it wrote, "at the dirty streets along which flows filthy water in which people wash their dirty clothes, and which serves as drinking water for the masses." How true this is we only know who live in the country. "As regards the lighting at night of the streets in Teheran," it continued, "the capital of a nation which boasts of 6,000 years of civilisation, the Municipality has entrusted this to the moon which does its best to guide us in the dark, tortuous narrow lanes, full of holes and pitfalls, whenever it is not obscured by clouds!" Such criticism is very refreshing, for it is only too true that the electric lighting leaves much to be desired, and the dim overhead bulbs give no light whatever but simply show the way along the streets on a dark night by their dull red glow, and even they are extinguished long before midnight!

CYPRUS.

Nicosia, November 9.

Mr. A. J. Dawe's Visit.

Mr. Dawe, of the Colonial Office, while thanking the Greek Members of Council, who sought an interview, for their courteous congratulations on his visit to Cyprus, has replied by letter, stating that he came as a private guest of the Chief Justice, solely for purposes of relaxation, and that he is sure in the circumstances that he will be excused from complying. While the wish has been expressed that Mr. Dawe would examine for himself the whole situation, there is at the back the continued hope of introducing the alleged desire of the Greek community for union with Greece.

New Office Hours.

A change is to be made in the working hours in all Government offices and in the Law Courts during the whole year. For many years past a change has been made for the summer months only. Henceforward the hours will be from 9 a.m. to 2 p.m. The change should be generally welcomed; but it would appear from some remarks in the Greek Press that there is some anxiety lest only the higher officials should really benefit from the proposed alteration.

The Public Health.

A British Mission (consisting of Dr. Lee, Mr. Rolfe, and Miss Rolfe, as secretary) has for some weeks been visiting different parts of the island and carrying out a most energetic campaign, with a view to the adoption of organised measures for fighting the development of venereal diseases. The need of such action has now become marked, as the few following figures may indicate. The number of those suffering from such complaints in Europe being placed at 10 per cent., the number in Cyprus may be computed at 20 per cent. In Cyprus the number of those suffering is 1 in 171, as compared with 1 in 481 in Paris, and in 561 in Berlin. The Mission has been visiting hospitals and many other institutions, medical men, the Press, schoolmasters, and leading bodies and individuals. A Central Committee has been formed in Nicosia. The acting Governor has presided at important meetings. Full support has been promised, and money will no doubt be voted. The hope is expressed that the Government will not in any way oppose the introduction and passing of measures needed for suppression of the evil by compulsory treatment, and other means. Stress is laid on the great importance of games and physical exercises in schools, and of the increased movement in favour of athletic, football, and other clubs.

General News.

The Chief Inspector of Police in Ceylon has recently arrived from England to inspect and report on the island Police.

The Exhibition of Forest Produce at Nicosia, organised by Dr. Unwin, Principal Forest Officer, has been on an increased scale and has been a great success. It has been visited by schools and other bodies.

It is generally believed that increased interest in the island has been aroused in the Colonial Office: which will lead to important steps towards its development, and to further financial aid.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

AN ARMY IN IRAQ.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Whatever happens in the years to come, Iraq must remain within the sphere of British influence, and if hedged in by treaties with her neighbours, Nejdis, Turks and Persians, rendering her secure from molestation, she will have no need to provide an army at all: a body of mounted troopers, one thousand strong, to keep internal peace and order, would suffice.

There is great evil, and even danger, in having a regular army in one confined area, especially in the East. For one thing, it will not be of any use; and for another, it may prove very demoralising, besides being too costly for such a small country.

And, in consideration of the opposition manifesting itself in the country to compulsory service, it cannot be thought unreasonable on the part of town folk unaccustomed to army life, and of nomads unbroken to discipline to dislike it. The Turks did have conscription for the urban population, but it was more as a means of raising money from those who could buy themselves out, than to conscript a few poor fellows who could not, and who were sent for four or five years to Arabia, to rough it there, and come back in rags.

Iraq now is a self-centred country, with a small population and much land awaiting hands to cultivate it, and much administrative work to cope with. It cannot spare its young men for drill and parade!—I am, etc.,

TURKEY'S FOREIGN POLICY.

The *Milliet* of Constantinople has recently been discussing the question of Turkey's foreign policy. In its issue of November 7 it contains an article by Mahmud, who wrote on the same subject a few weeks ago—his remarks then receiving notice at the hands of such English journals as THE NEAR EAST AND INDIA and *The Times*. Mahmud now begins by saying that in spite of the clearness of his first article relating to Turkey's foreign policy, many misinterpretations have followed. This does not disturb him, however, as the West has never tried to understand the East and has always judged wrongly.

He summarises his former article as follows:—

That Turkey views the League of Nations in no unfriendly spirit, and cannot imagine anything to prevent Turkey having a permanent seat therein, and that her joining would be a source of strength to the League.

That Turkey has as yet taken no steps whatever to enter the League.

That Turkey's relations with Persia and the other Eastern nations are clear and cordial, but that these *rapprochements* need cause no anxiety elsewhere, and that such *rapprochements* with the West are possible. He then regrets that influential papers like *The Times* and THE NEAR EAST AND INDIA should have taken wrong views about his article and (verbatim translation) "Our brothers of the pen looked at matters from a wrong angle and have formed wrong impressions."

The wrong impressions are, he says:—

1. That there is anti-foreign feeling among Turkish statesmen of to-day.

2. That it is more to the benefit of a small nation to join the L. of N. than to that of the League, and that Turkey cannot be called "New Turkey" until she joins.

3. That Turkey, while wishing, from a certain standpoint to westernise herself, allows Russia, who is antagonistic to the West, to gain an undue influence in Turkey.

4. That Turkey wishes to enter the League and that his (Mahmud's first) article paved the way for this.

Mahmud now deals with these points *seriatim*:—

1. Is not worth refuting; only amongst primitive tribes would such a thing exist.

Regarding the L. of N. In order to make a proper appreciation of Turkey and the Turks. it is most important to understand the national attitude of mind of Turkey of to-day, for her foreign policy must follow the trend of events. There is nothing but complete unanimity in the Cabinet rgarding this.

Turkey has never been antagonistic to the ideal of the L. of N., but asks herself whether such a state of mind exists which would make the attainment of their ideals possible. So far Mahmud considers that the L .of N. has not lived up to its ideals, and quotes Dr. Gustav le Bon as bearing out his opinion, when the latter admits that the L. of N. is powerless to arrest the anarchy into which Europe is drifting. In any case, Mahmud continues, Turkey would consider it right and logical only to enter an association which would give her a sympathetic hearing, and not an assembly ruled by a few nations with pre-conceived ideas, and in whom the world of politics is now centred. Therefore Turkey considers it useless simply to send her delegates to Geneva to swell the number of the 49 others.

Turkey will consider this matter seriously only when she is offered a permanent seat, and it is necessary to repeat that so far Turkey has taken no steps whatever to enter the League.

Mahmud continues: "That which Europe has never forgiven Turkey for, is her close relations with Russia. It is difficult to explain why the West regards Russia as 'disgraceful.' It is one thing not to agree with the principles of Russia's foreign policy of to-day: it is quite another not to recognise Russia in international affairs. The necessities of international justice must never be forgotten. The cordial relations of Russia and Turkey are rendered necessary by our common needs. We are told that, while we wish to westernise ourselves, we pursue a policy favouring the East.

We do not understand this. Only as regards industry, civilisation, and science do we take our ideas from the West, but we intend to follow our own line of action. Turkey has both an Eastern and a Western front, and to assure her national security intends to adopt every means offered by the civilisation and science of the West to retain the confidence of the East, who has so many interests in common, and to maintain friendly relations with Western nations who have gained so much through civilisation and science."

A leading article, above the signature "Milliet," appears in the *Milliet* of November 12. It is on the journey of Rushdi Bey to Odessa.

The writer says that the visit is nothing more than an exchange of views between friendly States, and that such visits are necessary to strengthen existing friendships. Three circumstances have, however, combined to give an air of mystery to the visit, e.g., the secrecy with which it was undertaken; the presence in Angora at the time of the Persian, Afghan, and Chinese Ambassadors; and the publication in the European Press of the possible forming of an Eastern League of Nations, or of an Eastern Locarno policy. He says that this may be the policy of the Eastern nations, but that it is quite clear that such a project could not be achieved at Odessa by Rushdi Bey and Chicherin. He ends by saying that Turkey's friendship with Russia is perfectly open and natural, and such visits and conversations are sometimes necessary.

The tone of the papers ending November 13 is very anti-English. An unsigned article of the 13th, under the title of "Rushdi's meeting with Chicherin," deals with the impending consolidation of Asia against Europe. The latter regards Asia as a sort of farm. A photograph of a Chinese shouting "Down with England! Long live the unity of Asia!" is shown. The article goes on to say that Japan's attitude towards England has changed of late years, and that Japan is showing a wish for a closer *rapprochement* with Turkey.

In support of this statement the *Milliet* quotes Admiral Yamamoto's visit to Constantinople and the impending Japanese exhibition there.

There is a caricature of John Bull, asleep in bed, being wakened by the screaming of a black child (India) who wants self-government. J.B. says to himslf, "I must either strangle this child or jump out of the window."

There is also a caricature copied from the *Isvestia*, which shows Mr. Baldwin standing on a crumbling tower, on which are inscribed the names of the Colonies. There is a notice asking people not to touch, as the exhibit is in danger of collapsing.

The *Milliet* of November 14 contains an article by Agha Oghlu Ahmed on the Odessa meeting, which is in striking contrast with the other columns relating to the meeting.

The gist of Agha Oghlu Ahmed's leader, dated Angora, November 13, is as follows:—

"The Odessa visit has given a section of the European Press a pretext for a storm of excitement. Some of these papers regard it as a menace to England, others as the crowning point of incitation of the East against the West. Generally a feeling of antagonism to Turkey is aimed at.

"Needless to say, these utterances are entirely false. Everyone knows the circumstances of the visit. As our Ambassador at Moscow, Zekkia Bey, has pointed out, the Hamidieh proceeded to Odessa to return the visit of the Russian Black Sea torpedo fleet to Constantinople, and Rushdi Bey took advantage of the occasion to visit Chicherin and to renew the long-standing cordial friendship with him.

"While there is no doubt that this visit will further strengthen the bonds between the two nations, there is

Digitized by Google

nothing in it to warrant its being called a menace to any other country, or an attempt to unite the East against the West.

"Tewfik Rushdi Bey has said on this subject: 'We do not differentiate between East and West. We take only civilised nations into account, and Turkey is one of these. I know nothing of any Asiatic League of Nations.'

"Turkey's foreign policy has been categorically explained by Mustapha Kemal and Ismet Pashas at the opening of the Grand National Assembly, and this is that Turkey's foreign policy is to follow a line of open and cordial friendship with all.

"Do these utterances of these two highest personages in the State breathe anything but the spirit of peace, and can anyone, no matter how far off, find spirit of enmity in them? Are not peace and tranquillity necessary for those who have brought about so important a revolution (as in Turkey)? As regards East and West, it is a strange thing that while in our life and mental attitude we are turning Westwards, we are accused by the West of 'easternising' ourselves. For us, we have no special interests in either East or West. What we do attach importance to is our national security in the future, and it is our single aim and object to secure this. To live in peace with all nations is one of our national basic principles.

"The friendship which we have formed with Russia strengthens us in holding these principles, and does not thereby tend to sow discord between East and West or bring about hostility to any nation, but does the reverse. And the Odessa visit has the same meaning."

LECTURES ON BULGARIA.

On October 20 Lady Muir (*née* Nadejda Stancioff) lectured to the Women's United Rural Institutes, at Doune, Perthshire, on "Home and Social Life in Bulgaria." Special attention was paid in this lecture to a description of life in Bulgarian villages, the refugee settlements, and the charitable institutions of the towns. On November 11 Lady Muir addressed, at Stirling, the Scottish Branch of the National Council of Women, speaking on "Women's Life and Social Work in the Balkan Countries." In this lecture were sketched the habits and traditions of the Bulgarian, Greek, Albanian, and Yugoslav nations. The lecturer pointed out the importance attached to education in these countries, and the heavy problems facing them, and remarked on the possibility of women's becoming pioneers of international peace. In illustration of this point she spoke of the recent visit to Yugoslavia and Bulgaria of the Marchioness of Aberdeen and Temair, President of the International Women's Union, and of the advantages of Girl Guides, Boy Scouts, Y.W.C.A., and other similar institutions by which *rapprochement* between nations was being effected.

NEAR AND MIDDLE EAST ASSOCIATION.

A meeting of the Near and Middle East Association will be held to-morrow (Friday) at 8.30 p.m., at 55, Harrington Gardens, South Kensington, by kind permission of Mrs. Bruce Dick. The subject to be discussed will be "The Outlook in Syria." Major E. W. Polson Newman and Captain R. Gordon Canning will be the chief speakers, and Sir John Foster Fraser will preside.

The first refugee settlement to be built in Bulgaria was inaugurated this week. It is named Atholovo, after the Duke and Duchess of Atholl, who opened the subscription lists.

Dr. Petroff, senior medical practitioner of the town of Tighana (Roumania), announces that he has succeeded in isolating and colouring the microbe of evanthematic typhus.

THE WEEK AT HOME.

London, Tuesday Morning.

The Imperial Conference.

One rather likes to imagine the chagrin with which the peoples in such countries as, say, Russia or Turkey, which have professed to see the British Empire visibly falling to pieces, will read the general report of the Imperial Conference. For the truth is that at this Conference differences were not shown just to be widened but discussed to be met. That they mere met admits of no doubt.

The great question was the constitutional question: the problem of the harmonious extending of Dominion autonomy with the preservation of Imperial unity. This has been greatly clarified. The Conference favoured a system of direct and personal contact between the King's Governments in Britain and the Dominions. The Governor-General, therefore, while remaining the representative of the common Sovereign, is no longer an agent overseas for the Government in Britain. For instance, the Canadian Prime Minister has gained approval for the appointment of Mr. Vincent Massey as first Ambassador from Ottawa to Washington: which implies that the Empire will have two representatives at Washington.

Similarly with South Africa and Ireland slight adjustments have been made which do not detract at all from Imperial unity but certainly assuage natural and perfectly justified local susceptibilities.

These "political" changes will undoubtedly be solidified by the realisation of the economic proposals of the Conference. It is hoped that a connected, and not an individual, policy in regard to immigration, trade intelligence, transport, and so on, will be hammered out in the near future. Until the fullest reports are issued, it is premature to profess to see the "epoch" which this Conference is said to have created, but there appears to be no doubt that it has been a remarkable and resounding success. Quite plainly those glimpes of the "parting of the ways" and of the splitting off of certain colonies which a few prophets indulged in were but pessimistic mirage.

Another Newspaper Deal.

One of the most refreshing of recent developments in journalism is the entrance of new men into the proprietary world of newspapers. In these days of vast groups, such

as the Beaverbrook or Berry concerns, it is good to have men hitherto unknown to have had connexion with newspapers entering this exciting field. The advent is to be welcomed, therefore, of Lord Reading, Sir David Yule, and Sir Thomas Catto, who have purchased Mr. Lloyd George's controlling interest in the *Daily Chronicle*, the *Sunday News*, and the other provincial papers which together are known as United Newspapers, Limited.

This moves comes as a natural corollary of Mr. Lloyd George's offer last week of the income (and part capital, if necessary) of his private fund to help the Liberal Party: he has had to liquefy his more considerable assets. It is understood, however, that these various newspapers will still be conducted in the Liberal interest, although none of the three proprietors—whose names, incidentally, are so well known in India—has professed any particular interest in party politics.

The Coal Dispute.

Now that the coal dispute is virtually over, little interest appears to be taken in the actual details of a "settlement." But, as I hinted last week, the Government's final intervention is taking a form that is very distasteful to those observers who imagined that Right sat completely and inevitably triumphant on the coal-owners' shoulders. One Conservative journal positively fumes at the audacity of one Cabinet speaker in saying that the Government proposed to watch over the district settlements and prevent the owners from driving a hard bargain. Sir Lamington Worthington-Evans further had the temerity to say: "We will take care of the under-dog." This promise is classed with the "mischievous rhetoric of Mr. Cook"! Obviously, therefore, the Government is going to be shot at from both sides.

In the meantime, the miners have been at once rejecting the Government's offer and returning to work. The delegate conference have, however, drawn up some "general principles" for the guidance of the districts in negotiating local agreements. Some of these principles are likely to cause considerable differences with the victorious coal-owners. For instance, the ratio of 87 to wages and 13 to profits, the maintenance of pre-stoppage rates, and the reinstatement of workers—all these are, it seems, rather things to be hoped for than a *sin qua non* of return to the pits. But, as has been said, public interest, once the Government's offer was refused, visibly declined. So is ending what is probably the sorriest tragedy in the country's industrial history.

The Observance of Sunday.

The Church of England is manifestly all at sea in its attitude towards the observance of Sunday. The Dean of St. Paul's has just been making out a case for the Puritans, who, of course, were responsible for the wide introduction of Sabbatarian notions into this country. He, however, by no means has all the clergy with him in this matter.

The Church Assembly last week debated the problem A resolution was put condemning the recent decision of the Ecclesiastical Commissioners to permit Sunday games on the lands under their control. The Dean of Exeter promptly opposed this. He said that Sunday was not the Sabbath, and was not in any way governed by the Fourth Commandment. The Sabbatarian idea was a Puritan tradition. Such a resolution as this would alienate men from the Church, for Sunday recreations had come to stay, and the Church should guide rather than oppose this modern movement. Sharply on the other hand came the Bishop of Durham. He submitted that the maintenance of the Lord's Day was the backbone of the working system of the Church of England. If the secularising habit were not arrested and turned back, this working system would be paralysed. Matters now were so bad that teachers could not be obtained for the Sunday Schools because they were motoring.

But, since it was Anglicans and therefore compromisers who were debating the question, a resolution was passed which reflected on no one but deplored any action being taken to strengthen the secularising tendencies in English society.

It is very much to be doubted, however, whether the ordinary offender—the man and woman, that is, who are offensive in the eyes of a section of the Church—will take the slightest notice of this resolution. There can be no question that the English Sunday is approaching the Continental Sunday, which of course is guided by Catholicism or agnosticism. The problem from the religious point of view, therefore, would seem to be whether Catholicism can be made to appeal to the Englishman who likes his games and his recreation on Sunday more than the going to Church which sufficed his father's needs.

A Literary Scandal.

A puff of wind was raised last week with the publishing of "A Whispering Gallery," which purported to be the memoirs of a diplomatist. It appears to have contained a notorious amount of scandal, the critics who read it having been particularly severe on its maligning of the recently dead. A cry for its suppression was taken up in a considerable number of newspapers, the *Daily Mail*, which, in that queer way it has, is at occasional intervals a "national" newspaper, heading the list. For a time the publishers held out; but against a combination of penny newspapers no mere firm, it seems, can stand out for long. In a day or two the publishers capitulated. . . .

There can be no doubt that this campaign and its successful ending are a sign of health in the community. No more morbid criterion of our age could be found than in the commercialisation, which has grown enormously since the War, of confidences spoken in private conversation. Some of these authors and authoresses have not scrupled to use their rank and name as additional attraction to the omnivorous reader of scandal: and when such rotten stuff is printed anonymously, it is even worse. Perhaps this public repudiation of a rank volume is the turning of the tide. For myself, however, I do not think so—for the highest paid "journalism" consists of just that "spicy" sort of indiscretion which was in the old days left unrecorded and forgotten.

ALTER EGO.

Under the auspices of the Anglo-Hellenic League, Miss Thring, one of its members, will give a reception tomorrow (Friday) at nine p.m., at 5, Queen's Gate Gardens, S.W., when Mr. F. H. Marshall, the Koraes Professor, will speak on "Some Reminiscences of the War of Independence, 1827-29, from Sir Richard Church's Papers."

PERSONAL AND GENERAL

TO-DAY

November 25, 1926 (New Style).
November 12, 1926 (Old Style).
Jomada I. 19, 1345 A.H., of the Muslim Calendar.
Kislev 19, 5687 of the Jewish Calendar.

Mme Ferid Bey, wife of the Turkish Ambassador, has returned to London from Paris.

Mr. Rudyard Kipling has accepted the Fellowship of the Royal Society of Literature.

H.H. the Maharaja of Burdwan leaves London to-day, via Marseilles, on his return to India.

The Hon. Sir Eric Drummond, Secretary-General of the League of Nations, left London on November 21 for Geneva.

Sir Henry Dobbs, the High Commissioner for Iraq, arrived in Constantinople on November 19 on his way back to Baghdad. He was to pay a visit to Angora.

The Hon. Sir William Erskine, K.C.M.G., British Minister to Bulgaria, and the Hon. Lady Erskine have arrived at 70, Lowndes Square from the British Legation, Sofia.

It is officially announced that Sir Lancelot Sanderson, lately Chief Justice of the High Court of Judicature at Calcutta, has been appointed a member of the Judicial Committee of the Privy Council.

Sir Ernest Dowson, the new Lands Commissioner, has arrived in Jerusalem to undertake the survey upon which the reforms in taxation and tithing are to be based in Palestine.

Sir Prabhashankar Pattani left London on November 18 by the P. and O. special train to join the s.s. Rawlpindi at Marseilles for Bombay, to resume his duties as President of the Council of Bhavanagar, Kathiawar.

M. Venizelos has arrived in London for the purpose of resuming with the British Treasury the negotiations, interrupted early last summer, for the funding of Greece's War debt to Great Britain. He is staying at the Ritz Hotel.

Among the passengers who left London on November 18 by the P. and O. special train to join the s.s. Rawalpindi at Marseilles were Sir John Cargill, for Aden, and Sir T. R. Wynne, Sir N. and Lady Wadia for Bombay. Also embarking on this vessel at Marseilles were Lady Thompson for Port Said, Lieut.-Col. Sir Thomas and Lady Robinson, Sir G. Rainy and Sir M. Rafique for Bombay.

The annual re-union dinner of the British Serbian Branch of the British Legion will be held next Saturday week (December 4), at the Victoria Mansions Restaurant, Victoria Street, Westminster. The President, Sir James Berry, will be in the Chair. All who served in Serbia are invited, together with their friends. Tickets may be obtained from Miss Marx, 24, Melcombe Court, Dorset Square, N.W.

UNIVERSITY OF DUBLIN. TRINITY COLLEGE.

The Professorship of Arabic, Persian, and Hindustani is now Vacant. Applications, accompanied by a detailed statement of qualifications and copies of testimonials, must reach the undersigned on or before Tuesday, November 30. The duties, which consist mainly in lecturing to Probationers for the Indian Civil Service, will begin on January 10, 1927.

The salary attached to the Chair is £250 per annum and the tenure is for seven years in the first instance, but the Professor will be eligible for re-election. Chambers in College will be provided.

G. WATERHOUSE,
Secretary to the University Council.

November 6, 1926.

The Amir Abdullah, who went to Cyprus to visit his father, King Husain, has returned to the Transjordan.

Marshal Cadorna arrived last week at Government House, Jerusalem, as the guest of Field-Marshal Lord Plumer, the High Commissioner for Palestine.

A funeral service for Coles Pasha, who died suddenly on the Biarritz golf links was celebrated at the English Church, Biarritz, on November 16. The body was sent to Paris for cremation.

The Gordon Memorial College Fund Annual Meeting was held at the offices of Messrs. Glyn, Mills, and Co., Lombard Street, E.C., on November 17. Sir Reginald Wingate spoke.

Sirdar Ikbal Ali Shah is due to speak to the Near and Middle East Association on "The New World of Islam," with Sir Denison Ross presiding on December 2, at 8.30 p.m. This meeting is to take place at 14, Queensberry Place, South Kensington, by kind permission of Mrs. Beauchamp Tufnell.

Sir George Clerk, the new British Ambassador, left Constantinople on November 19, for Angora to present his letters of credence to Ghazi Mustapha Kemal Pasha, President of the Republic.

The Egyptian Chargé d'Affaires, Sesostris Sidarouss Bey, to celebrate the departure of Sir John Maffey, the newly appointed Governor-General of the Sudan, who leaves London this week, gave on Monday, November 22, luncheon at Claridge's Hotel. The guests included:—Lady Maffey, Mr. John Murray, of the Foreign Office, and Mrs. Murray, Captain E. O. Midwinter, Mr. Hugh Fraser, and Mr. E. O. Springfield of the Sudan Government. Mlle. Sidarouss and the members of the Royal Egyptian Legation were present.

Lieutenant-General Sir C. W. G. Richardson, K.C.B., C.S.I., will vacate the command of the Poona District on December 23. Brevet Lieutenant-Colonel P. C. S. Hobart, D.S.O., O.B.E., M.C., of the Royal Tank Corps, will relinquish his instructorship at the Quetta Staff College on May 12. Major N. L. Mitchell-Carruthers, of the 1st Battalion 16th Punjab Regiment, will vacate his appointment as Deputy-Assistant Adjutant-General at Army Headquarters, Delhi, on February 31. These officers have been granted leave pending relinquishment, and officiating officers temporarily take over.

Book Reviews

A JOURNALIST IN THE MIDDLE EAST.

"THE MIDDLE EAST." By Major E. W. Polson Newman. (London Geoffrey Bles. 25s. net.)

The respective spheres of journalism and literature will never, we suppose, be precisely defined, but it is seldom that any keen student of them has difficulty in deciding on the allocation of any particular book. This book, we regret to say, definitely comes into the former category. Possibly this may not occasion surprise in consideration of the author's record in the East as correspondent of the *Daily Mail* and *Morning Post*, but one had hoped that, in a book entitled "The Middle East," something more than journalistic *réchauffé* would have been included. The publishers refer to the fact that the volume contains both "impressions and conclusions"; but the first are much more notable than the second.

Not that the impressions are badly made. Far from it. Such things as the visit of Lord Balfour to Palestine and Syria, the manifest defects in both the Arab and the Zionist cases, the unwillingness of the French in Syria to go "the whole hog," are described with considerable picturesqueness and accuracy. But no number of such descriptions, we feel, will compensate the reader for the larger picture of the Middle East. Obviously the author had seriously in view the writing of an authoritative work upon one of the most problematical regions in the world: he publishes, for instances, very many excellent photographs, and has as appendices such documents as the Balfour Declaration, the Churchill Statement, the Sykes-Picot Agreement, and so on. But to suggest that he has given a continuous study of the post-War history of Arabia, or even of present conditions in the Middle East—such as might have been based on these documents—would be unfair to the research students, although to the larger number of "impression-hunters" it would matter far less.

Despite the fact that the author has nothing very fresh to say—he appears to be guided in unusual extent by the views of others—it is distinctly possible to enjoy the book. The fact that he had for long periods the opportunity of first-hand observation of events in countries like Palestine and Syria alone gives his work a value, although the events so described were, undoubtedly, better reading at the time of their original publication in various journals. That the volume might have been improved had Major Polson Newman eschewed his journalistic articles and attempted more to correlate his impressions, to give a more closely knit frame to his picture of the Middle East, is only too probable. One cannot think, for instance, that he would limit the influence of the Wahhabi movement upon the Middle East to that raid on Amman which he so well described in and here partly reprints from THE NEAR EAST. In other words, he might be well advised to re-write some chapters, and to suppress others. For it would be a pity to allow but temporary value to a book that has in it the possibilities of something much more than that.

A LEVANTINE ROMANCE.

"IN THOSE DAYS." By William Ransted Berry. (London: John Murray. 7s. 6d. net.)

Although this novel is of the East there is nothing in it of shaikhs and infatuated white women and the rest of the monstrous hotch-potch that goes to make up the hodiernal "thriller." Mr. Berry knows his East too well to rely on any meretricious ornaments to his tale; he tells a simple, though highly melodramatic story, and to those who like this kind of thing—and the old-fashioned admirers of a straight yarn are still numerous—"In Those Days" is likely to provide considerable entertainment.

The plot of this novel is laid in a port in Anatolia well known to Europeans—at least it was, in the pre-War days of which the author speaks, well known. It is not our purpose to explain that plot, but if it is indicated that the main characters in it are a prosperous British merchant and his wife, their charming daughter, their slightly egotistical nephew, two daughters of an effete Turkish Pasha, a real Turkish villain, and, above all, a negro servant, sufficient will be known to recognise that here are the ingredients of a very reputable yarn. And if, further, we tell that one of the Turk's daughters commits suicide to save herself from the Turkish villain, and that the young Englishman takes a young Turkish woman for wife (who, moreover, appears in her love for him even to renounce the Allah of her religion for the God of his) in preference to the simple English girl (who at the end gives her life for him), then, we imagine, readers who know the Levant will not be slow in inquiring for the book. For ourselves, we could wish the heavy drama to have been ocasionally relieved; and to pretend that we did not weary of the omniscience of the negro, Mehmet, would be disingenuous. But undeniably it is a novel to hold the attention, particularly for those readers to whom the call of the romantic East is recurrent and irresistible.

THE MIDDLE EAST
By Major E. W. POLSON NEWMAN.
Illustrated. 25s. net.
A very interesting study of present conditions in Palestine (with special reference to Zionism and the Arab Case), Syria, Persia and Mesopotamia.

THE CENTRAL ASIAN SOCIETY.

The next two meetings of the Central Asian Society will take place in the Royal United Service Institution. The first, at 5 p.m. on December 1, is to be an illustrated lecture by Mr. H. Charles Woods on "Syria"; and the second, on December 16, is also an illustrated lecture, by Comm. Luigi Villari, on "The Italian Colonies on the Red Sea and their Connexion with Central Asia."

A general census of all the inhabitants of Turkey, both in Europe and Asia, will take place early in 1927.

Al Mokattam of Cairo reports that Zaidi Imam Yahya of Sanaa has appointed a Yemeni envoy to Angora.

Mrs. Steuart Erskine took for the subject of her lantern causerie last Sunday to members of the Anglo-Palestinian Club, at Jews' College, Guilford Street, W.C.1. "From Jerusalem to Petra." The Chair was taken by Dr. M. D. Eder.

The Qajar Prince Abu'l Fath Mirza, the Salar-ed-Dowlah, who started an insurrection in Persian Kurdistan in August in hopes of seizing the Throne of Persia, was last week arrested by the Iraqi authorities at Erbil and taken to Baghdad.

Owing to the financial difficulties of the Municipality of Tel Aviv the Government of Palestine is advancing it £E30,000, and the Zionist Executive is granting £E15,000 for road building to ease the unemployment in Tel Aviv.

The death is announced from Bucharest, at the age of 67, of Mr. Alexandre Constantinesco, leader of the Roumanian Liberal Party since 1909, and a member of all the recent Liberal Governments.

Najim al Fahad es Sadun was found "guilty" at Nasiriyah on November 15 of causing the death of Mr. A. B. Elliott, mechanic to Sir (then Mr.) Alan Cobham in the earlier stages of the flight to Australia, and was sentenced to five years' rigorous imprisonment.

THE NEEDS OF INDIA.

It is to be hoped that the important letter contributed by Sir Albion Banerji to *The Times* of November 17 will receive the attention that it deserves. Its writer has been a member of the governing class both in British India and in the "model" State of Mysore, and therefore speaks with authority: as an Indian, he speaks with sympathy: as a widely-travelled man, he speaks with knowledge. His letter insists in particular on two points —the necessity of arousing interest in England on the subject of India, and the necessity for the existence of a strong Central Government in India. As regards the first of these two points, the need is obvious enough, though the solution is not so obvious. There are two classes in England who would naturally be expected to take a real, intelligent and abiding interest in India—politicians and merchants. Politicians because India contains four-fifths of the entire population of the British Empire, and the ultimate destiny of that enormous mass of humanity lies in their hands: merchants, because India is not only the United Kingdom's greatest actual market, but potentially one almost immeasurably greater. As for the politicians, it is only necessary to observe the effect on the House of Commons of the introduction of an Indian debate—the immediate emptying of the benches: those private members who remain being either the few who have some personal knowledge of or connexion with India, or those who—having neither—wish to air their views in condemnation of "imperialism" in general and of British "imperialism" in particular. As for the merchants, anyone who has attempted to obtain practical support, even from those whose main business interests lie in India, for any project which, though holding out no prospect of immediate gain, is yet calculated to better that understanding between Indians and Englishmen without which no permanent improvement in trade relations can be hoped for, will be able to gauge, from their attitude, the hopelessness of a similar effort in the case of those not directly interested. The reasons for this neglect are not far to seek: for the politician, India has no vote that counts in an election or a division: for the merchant, India is already so good a customer as to produce a feeling of placid contentment with things as they are. In at most about two years from now, the politician will have to pay attention to India, whether he wishes to or not: and the merchant will have to realise the closeness of the connexion between Indian politics and trade—a matter already realised by British merchants in India, though their confrères at Home seem still determined to ignore it.

Even given the two full years of breathing space before the Statutory Commission of 1929 gets to work, the time is none too long. If the politicians and the merchants wish to make their voices heard in the all-important settlement, it is high time that they began to make up their minds as to the policy that they wish to see prevail. For this purpose, they need to equip themselves with ideas: and the first requisite for ideas is understanding. Knowledge they cannot hope for—it is a truism among English officials in India that the more a man learns of the country, the more deeply is he convinced of the profoundness of his ignorance of it. Up to the present, it may be said with confidence that the British politician and the British merchant, with a few conspicuous exceptions, have made no attempt to reach even the modicum of understanding that is within their grasp and that is so vital to their future. That Indians as a whole are, if anything, even more remiss in this particular is nothing to the point—in spite of the voluble assertion by professional politicians in India that her future is her own concern, it is undeniable that, at least for many years to come, the future destiny of India will lie in British hands. And, if those so nearly interested—the politicians and the merchants—refuse to give the matter their attention, what can be expected from the British man in the street? Sir Albion Banerji's letter speaks of "a certain section of the American Press dealing with sensational news relating to Indian politics, personalities and cults," and suggests that this is not what appeals to intelligent readers in the United States. If this is so, the States are better served than England in this respect; for ninety per cent. of the Indian news appearing in the English daily Press is of the nature that he denounces. If it is true that the British politician ignores India because she has no effective vote either in the constituencies or in the House, it is also true that, in a contested election, the most irreproachable views, the most catholic knowledge, of Indian matters would not earn a single vote: the only way in which India can be made to influence votes is when the misdeeds of British imperialists or capitalists in India are quoted—or invented—in support of an argument whose point lies nearer home. If the average British voter had nothing to fall back upon but blank ignorance of Indian matters, it would be bad enough; it is much worse when the only aspects of them that reach him come from sensationalism in the Press and misrepresentation by men who often do, and always ought to, know better.

As for Sir Albion Banerji's second point—the necessity for a strong Central Government in India—this is one that commands general agreement, but great diversity of view as to how it should be achieved. His letter mentions two alternative schemes for the future governance of India: first, complete Provincial autonomy, apparently without any Central Government at all, which only needs to be stated to be dismissed at once—as he seems to dismiss it: secondly, Provincial autonomy within a Federation—which he appears to think unlikely to prove compatible with a strong Central Government. There does not seem any reason why this should be so: the idea, already several times suggested in The Near East and India, of the division of India into five large Provinces, each under a Government the majority of whose hierarchy is British, and each sub-divided into a number of sub-Provinces with a Government predominantly Indian, the whole under a Central Government whose members shall, at any rate at first, be entirely British, seems to offer a satisfactory solution. Such an arrangement would meet the natural and laudable desire of Indians for the widest possible measure of local self-government, while retaining

Digitized by Google

"a strong Central Government to deal effectively with questions of all-India importance"—to speak for India in a manner worthy of her proper weight in the Councils of the Empire. One can agree with Sir Albion in his belief that a strong Central Government will be able to check "the deplorable communal troubles" of India; but not with the view that it will be able to find "a ready and satisfactory solution" of them. One is firmly convinced that no real solution is possible: and that the function of the strongest possible Central Government can be nothing but to recognise their existence and their inevitable continuance, and to do what it can to hold the balance. But everyone will whole-heartedly agree with Sir Albion's protest against "things being allowed to drift till details are thrashed out before the next Royal Commission." The time is short: and all those who have the true interests of India at heart should try to make the best possible use of it.

CURRENT TOPICS.

The Governor-General's Council.

An inconspicuous item in the Indian news suggests that the Government is at last becoming alive to the harm done to India by the attempt to make the Council of half a dozen Members a representative body for communities, localities, and interests. One of the present Members, Sir Mahomed Habibullah, is leading the deputation which is going to South Africa, and his seat in Council is being filled temporarily by a gentleman who is doubtless fit for the position; but, since he does not happen to be a Muslim, the community, in accordance with recent precedent, promptly began to clamour that the Council should not be left even for a moment without a watchdog for its particularist interests. Lord Irwin's reply strikes us as being good in parts. The bad part is the aspiration for a Muslim "representative," a phrase which shows the position into which the authorities have drifted since the Council ceased to represent India as a whole: the good part is the refusal to recognise any binding rule, and the claim that the Governor-General in Council is free to make whatever appointments seem to him most in accordance with public interests. A sudden breach with a tradition, however evil, is always a difficult thing in India, but we hope that this declaration, backed up as it is by action, may be taken as marking the beginning of a definite swing back in the direction of reason.

A Matter of Arithmetic.

The idea of a "representative" Council is in itself thoroughly vicious, but, even if it were desirable, it would be impracticable in the conditions which prevail. At most there are four or five seats available, and of these the Hindus want at least two, and the Muslims as many as they can get, while Sikhs and Parsees, Buddhists and Anglo-Indians, all aspire to inclusion, and the Animists would certainly do so if they appreciated the position. Assuming, however, that the communities could be equitably "represented," it would still be necessary to provide for local aspirations. Each of the large provinces expects a permanent seat, while the smaller ones look for recognition from time to time; the Calcutta Press deals sternly with any slight on Bengal, while omission of Bombay drives the great city to temporary fury, and there is mourning in Madras, or Lucknow, or Lahore, if those parts are left for a moment without a "representative." It is conceivable that an expert mosaic-worker might succeed in fashioning a Council on these lines, but even then room would have to be found for all the interests which press so keenly for direct representation, the railway-men, the cotton trade, and the rest of them, while the undoubted fact remains that, if there is to be representation at all, the peasants are entitled to be in a majority of three to one—the peasants whom the Council has for years ignored, until Lord Irwin brought them so effectively into prominence.

The True Objective.

Surely it is time for India to recognise that the place for representation is the legislature, and not the Executive Council. In the Assembly communities, and localities, and interests can make their voices heard: the task of the Council is to see India steadily and whole through the welter of particularism which now prevails. What the Council wants for this work is statesmanship of the very highest order, and since statesmen are unhappily very few in number, there ought to be no rules, and no conventions, operating to hinder the choice, and, as has happened occasionally of late, to put third-rate men in the highest seats. For ourselves, we should be content to see the Council composed entirely of Etonians, or Kashmirs, or cotton-spinners, or entomologists, or any other class, provided this primary condition were fulfilled: what we object to is the inclusion of any individual on the ground that he belongs to a particular class. Lord Irwin's recent pronouncement seems to us, as we have said, to mark the beginning of a swing in the right direction: he has already repudiated the idea of an absolute rule, and the next step should be to break free from the conventions which have been allowed to get a start, and hold fast to the principle that the permanent good of India is the only thing which matters.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 4.

The July Riots.

Government are evidently a little tender on the subject of the second batch of riots, those which took place in July, and the reception by the Indian Press of the report of the Commissioner of Police upon them, which has been published during the week, cannot be described as soothing. Both Moderate and Extremists join in damning the Police for various reasons which seem good to them, and Mr. Armstrong, who has handed over to Sir Charles Tegart this week, probably feels with the policemen in "The Pirates" that with constabulary duties to be done a policeman's lot is *not* a happy one. That the duties are no sinecure is abundantly shown by the report itself. Speaking of the cancellation of the first Rajeswari procession, it says, "the possibility of the procession becoming a Hindu demonstration had thoroughly aroused the Mohammedans residing in the area through which the procession was required to pass, and any attempt to take the procession along this route without adequate escort would unquestionably have resulted in a violent and widespread conflict between the two opposing communities." The Moderate *Bengalee* does not see in this a sufficient reason for the cancellation of the licence, but it seems reason enough to any average, sane person.

Savage Animosity.

The other section which should be mentioned is the setting out of the details of another incident of the July riots. The doors, windows and other combustible portions of a block of houses in the centre of the city and the walls also up to a height of over two feet from the ground, were discovered to be drenched with oil. The premises were almost entirely occupied by Marwaris and up-country Hindus and "there seems to be little doubt that the oil was placed there by Mohammedans, with the object of setting fire to the houses by throwing down a torch during the passage of a Mohurrum procession. Oil had also been freely poured on the lanes which bound three sides of the buildings, evidently with the intention that the blazing roads would not only prevent the escape of the inmates of the burning buildings but would also delay the Fire Brigade in entering the lanes for rescue work and for extinguishing the fire." *Forward* sees in this a condemnation of the police for ignominious inefficiency if not worse, and uses it as another opportunity to throw mud at Government. It omits to mention that

Digitized by Google

it was generally believed that shooting at Mohammedans had been alleged to have taken place from this block of houses, and it is blissfully unconscious of the evidence the incident offers of the grade of civilisation that has been reached by certain sections of the inhabitants—and incidentally voters—of "the second city of the Empire." Truly, as was recently said in these columns, the jungle is less than 50 miles from Calcutta

The Elections.

The campaign is warming up in Calcutta and meetings morning and evening are the order of the day at the moment. The contests in practically every case have become entirely matters of personalities, and any attempts to fight on principles have been frankly abandoned. There has been a fair amount of rowdyism at the various meetings, but the interruptions have come mostly from irresponsible youngsters of the extremist groups. The older men, who are unwillingly dragged into these so-called political happenings, are shaking their heads at the result of the introduction of this foreign growth into the life of India, which has produced a state of affairs that outrages every canon of their society and caste traditions. The Indian journals are probably not finding it unprofitable, and all sides are yelling top notes: "Every black sheep or callow adventurer pledged to oppose the Congress." "The siren call for working the Reforms." "The diarchy—a veritable millstone that the British Parliament has hung round our necks—must be thrown off, or the nation will be strangled to death." "The 'hydra-headed monster'—called public opinion." "The prominent lieutenants of Deshbandhu would not have been flung into dungeons." "Their morbid and innate love for stage thunder." "Is all this farrago of absurdities and inconsistencies going to deceive the Hindu electorate of Bengal." "How they propose to get the money from the clutches of the bureaucrats." "The daily emasculation that is going on before our eyes."

Paris to Calcutta in Four Days.

The long-distance air record has again been beaten, this time by Captain Regnot and Lieut. Coste of the French Army, who have flown from Paris to Jask on the Persian Gulf, a distance of over 3,000 miles, at an average speed of 100 miles per hour. They left Paris on Saturday last and arrived at Jask 32 hours later; after spending two days there, they decided to continue flying into the sun and on Monday they made an entirely unexpected appearance at Karachi. At 7 the next morning they made off for Calcutta, and after a halt for the night at Patna, they arrived here shortly before midday on Wednesday. Paris to Calcutta between Saturday and Wednesday is good going indeed! The week has also seen the publication of Sir Samuel Hoare's speech to the Imperial Conference, and the European papers here are already visualising Calcutta as the Clapham Junction of the Air Services of the world.

Men and Things.

Although there has been considerable opposition in Bombay to the recommendations of the Currency Commission, the report at present holds the field; but a Currency League has now been formed in Bombay to do everything possible to defeat the recommendations of the Commission. Trading conditions in Bombay make it difficult to believe that this attitude is altogether disinterested.

Thanks to the coal strike, there has been something of a coal boom on the Stock Exchange this week. Coal has been sent to a number of ports which the Indian merchant thought had been lost for ever, and not only has there been the greatest activity at the docks, but freights have gone up to an extraordinary extent. The boom may only last a few months, but it has been sufficient to cause a good deal of excitement in Calcutta: the news to-day is that there were plenty of shrewd sellers unloading yesterday.

The farewell inspection of the Calcutta Fire Brigade by the Acting Commissioner of Police on his handing over this week, gives prominence to the remarkable state of efficiency to which that body has been brought since the appointment of Captain B. A. Westbrook to the post of Chief Officer some twelve years ago. The reputation of the Brigade was at a low ebb when Captain Westbrook took charge, and he has every reason to be proud of what is now one of the most efficient brigades in the world. It is equipped with the latest appliances, and the alarm system, coupled with the high state of discipline amongst the personnel, has resulted in a fine record of fires smothered before they had time to get a hold. In accordance with the prevailing tendency, the Brigade is to come under a Committee at an early date, and if the Committee is wise it will be content with letting well alone.

A new service of trains-de-luxe has been inaugurated between Calcutta and Bombay and the new "Blue Train," which is the product of the enterprise of the G.I.P. and the E.I. Railways and the P. and O., has given a convincing trial run this week. Is this a counter-blast to the Cairo-Karachi Air Service?

Captain W. R. Elliott, the representative of Toc H. on this side of India, has addressed the Rotary Club this week, giving particulars of its activities. The organisation includes men of all social classes as well as Indians and it has a remarkable record for sound social service without publicity. "Tubby" Clayton ought to be very pleased.

Students of public health will be interested to see the improvement in the figures of infant mortality for Calcutta for the last five years. They are as follows:—386, 330, 287, 294, 294, per mille. These compare with 292 in Madras and 566 in Bombay, an appalling figure.

The Trivial Round.

The first day of the Tollygunge Meeting was held on Saturday last. Thanks to the early coming of the cold weather conditions were ideal; the course has never looked better and the going was perfect; fields were small on the whole, but the racing was good, and it was a thoroughly enjoyable afternoon. Major Preston, the new Secretary, has brought the golf course and the gardens to as near perfection as possible, and Tollygunge is indeed the pleasantest place, and the best club in Calcutta.

The M.C.C. have concluded their visit to Karachi and finished by giving a sound thrashing to an all-Karachi team, winning by an innings and 148 runs. Gilligan is already discovering what Indian hospitality means, and when the team left, he is reported to have been almost invisible when he made his speech from a ring of garlands that nearly smothered him. The visitors have given way on the matter of Sunday play; there is no leisured class in India and Sunday is one of the most important of cricket days. The programme has had to be revised, and a number of the games cut down, but nothing will be lost by this in the end.

The cricket season generally is now in full swing and the number of players available is greater than ever. The game is undoubtedly waking up in Calcutta, and there will be a wide field for the Selection Committee. We hear they are overwhelmed by the number of applications that have been coming in for inclusion in the Tests. It reminds one of the happenings when the Bengali Regiment was formed; as soon as the announcement was made a hundred letters were received which all commenced:—"Sir,—Referring to the vacancy for the post of Sergeant at Rs.140-10-200, etc."

Now is the season of calling, and hostesses are busy with their new dinner lists. Have you heard of the bright young thing who carefuly worked out the burra-khana in which every lady was taken down by her "present" and found her "past" on her right. One seeker after novelty this year says she has put all the names in a hat; and she is now waiting to see what happens. There is something to be said for it.

The Empire has been occupied by the A.D.C. with a revival of "The Dover Road." It is almost better than

Digitized by Google

before and a brilliant *chit* to the producer, Mrs. "Pat" Deane.

Lastly the amateur mannequin show has reached here. Mrs. Arthur Page is organising the bright contingent to display frocks brought out by friends in aid of some children's charities. *Nous verrons*—yes, indeed.

Markets.

The jute market, without producing any significant features, has been steady since the markets opened, and there are indications that apart from small fluctuations prices will not go lower during the course of this month at least. Gunnies have been quiet on the whole, with a tendency at the close towards slightly lower rates. In the piece-goods market the demand was well maintained at first; but with the approach of the "Kali Pujah," which is being celebrated to-day and to-morrow, inquiries have fallen off considerably as a result of buyers leaving Calcutta. Up-country stocks are believed to be still on a small scale, and it is anticipated that on the re-opening next week conditions will again improve. No decision has yet been made by the Marwari Chamber of Commerce in connexion with the proposed further restriction of forward business, to which a number of Indian importers are strongly opposed. The tea market has taken a decided turn for the worse since the last review; stocks have been increasing and at present there appears to be no signs of a sudden end to the crop. Up to the end of September last, the outturn for Northern India exceeded that at the same time last year by about 16 million pounds and there is a probability that the crop for October will increase this by something between eight and nine million pounds. With regard to the sale here this week, good quality tea continues to fetch satisfactory prices, but other descriptions were anything between one and two annas down; in spite of these factors, the London market is reported as steadier, at the close. There is no doubt that the coal strike at Home has been instrumental in reducing the consumption of tea, and with Russia out of the market in addition it appears inevitable that stocks will be considerably enhanced by the end of the year.

On the Stock Exchange the feature has been the rise in the price of coal shares, mainly as a result of the continuation of the strike at Home. The last few days have witnessed a certain amount of profit-taking, and dealings are inclined to be limited to only the best shares at the moment. Jutes have come in for their quota of attention: one or two companies have recently issued satisfactory reports and declared good dividends in the circumstances, with the result that the shares of these particular companies have shown appreciable rises. Tea shares are quiet in sympathy with the commodity market, and in Government securities the tone is stead with no quotable change in prices. Little business has been passing in the Exchange Market with the closing quotation for Readv T.T. 1s. 5 27-32d. Money continues very easy, being nominally half per cent. for call and short notice.

INDIAN MAIL.

Aeronautical Meteorology.

In commenting, in a recent issue, on Sir Samuel Hoare's demand for early realisation of the necessity for mooring masts and the collection of meteorological data for the Empire air routes, one neglected the latter, so far as India is concerned, in the belief that the Indian Meteorological Department was already fully equipped to meet all possible needs. But it seems that it is not so. That very remarkably efficient Department collects data from all over the world, principally for its work in forecasting the course of the monsoon; but it seems that there is one important area, from the aeronautical point of view, that is at present neglected. This is the area roughly representing the triangle Karachi-Aden-Basra, a region which is at present singularly poor in communications and in conveniences for starting and maintaining upper air observations: and it is specially for this area that India has been asked to provide weather information for the airship service that is expected to start before long. The *Englishman* reminds its readers that the disastrous storm that occurred last October in the Persian Gulf, which did enormous damage to the pearling fleet and to the date plantations, might well have spelt destruction to any unwarned airship; but that, in the present state of meteorological knowledge of that neighbourhood the indications afforded on weather maps, of what was to take place, were practically nil.

The fulfilment of the demands on India, in this respect, will therefore involve considerable expenditure, and call for a knowledgeable choice of programme. Attention having thus been drawn to the necessity, it is to be hoped that the Government of India will take action betimes, and will lay to heart the remarks of Sir Samuel Hoare on the paramount necessity of doing so, quite as much in her own interests as in those of the Empire at large.

Calcutta Improvement Trust.

The report on the working of the Calcutta Improvement Trust for the year ending March 1926, records very satisfactory progress, particularly in the matter of roads and bridges. One new bridge was opened to traffic during the year, and a tender was accepted for the construction of three more. One is, perhaps, unnecessarily intrigued by the amount of this tender Rs. 922,362, 4 annas, 5 pies: one is inclined to wonder what the odd sum of (nearly) 4½d. is for. Six pies—half an anna—are generally accepted as equalling a halfpenny; but, in fact, with a 1s. 6d rupee, five pies is nearer to a halfpenny than six: and perhaps this is the reason why the careful calculators kept their estimate down to this lowest minimum. As Mr. Mantalini said, "the halfpenny be demned."

The accounts show that the income for the financial year 1925-26 was, in round figures, 74 lakhs on capital account, with expenditure of 64½ lakhs: and 43¾ lakhs on revenue account, with an expenditure of 23¾.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
London, Tuesday Morning.

The Nag Hammadi Barrage.

The call for tenders by the Egyptian Government for the construction of a barrage and subsidiary works at Nag Hammadi in Upper Egypt marks a further stage in the completion of the irrigation programme which is necessary to assure Egypt adequate supplies of water. In Upper Egypt it is unfortunately the case that when there are low floods considerable tracts of country remain unwatered. The object of the barrage is to protect a large basin area against *sharaqi*, and ultimately to enable the conversion of this area to perennial irrigation. The area that will be served by the barrage is estimated at about 500,000 feddans, and the scheme should mean much to the country for the soil of the region is fertile and the population is large. It is anticipated that operations will be commenced next autumn, and it is thought that the work will take about three years to complete. *En passant* it may be pointed out that it was expected that the proposed Gebel Aulia Dam would have been constructed first, and it was because the effect of this dam would be to lower the height of the floods that it was considered that further works such as the barrage in question would become increasingly necessary. However, the Egyptian authorities decided to postpone, for the time at any rate, the question of the While Nile Dam.

German Loan for Roumania.

A report from Germany states that the negotiations between the Roumanian Government and German financial interests for a loan to the former of 500,000,000 Reichmarks (£25,000,000) are virtually concluded. According to the same source Roumania undertakes to liberate all German property confiscated under Article 18 of the Versailles Peace Treaty, to agree to the suspension of the notes of the General Bank and to begin the redemption of the coupons of the Roumanian Rentes issued in Berlin.

British Trade with Bulgaria.

I have just been perusing recent figures dealing with the imports of motor cars and lorries into Bulgaria. The statistics illustrate very plainly the rapid development of the use of motors in Bulgaria; they also show that Great Britain is for all practical purposes not a serious competitor in this market. In 1923 the imports of motors and lorries totalled 101; in 1924, 219; in 1925, 402; while for the first three months of the present year the total was 94. The chief sources of supply in 1925 were Italy with 240 motors and lorries, France with 62, the United States with 41, Austria with 18, and Germany with 14, while Great Britain is included among all other countries, the total for which is 27. It cannot be argued in this case that the fault lies with the adverse exchange, for here we have the United States with a constantly increasing trade, the figures being 7 in 1923, 20 in 1924, 41 in 1925, and 15 (out of a total of 94) for the first quarter of this year. One is therefore forced to find some other reason for this unsatisfactory state of affairs, and we shall probably not be far wrong in attributing it to the old trouble with regard to British trade with the Near East, the lack of enterprise on the part of our manufacturers. As will be seen from the figures I have quoted, it is only in recent years that the Bulgarian market for motors has begun to develop, and our manufacturers have probably not deemed the market worthy of attention or have not catered for its requirements in the painstaking way that our rivals invariably adopt. The reason, whatever it be, is immaterial. It will not, however, be maintained now, I think, that we can afford to ignore any outlet, even the smallest, and that being admitted, it may be hoped that in the future a more determined effort will be made for a share in this particular market in Bulgaria.

Coals for Newcastle.

One of the most remarkable sidelights on the effects of the coal stoppage here, now happily at long last drawing to a close, is provided by the news that consignments of Indian coal have been despatched to Wales. No doubt if our own production had not been rapidly improving in recent weeks we should have looked to India for further assistance in the matter of fuel supplies. It may be noted incidentally that the list of Indian coal shares we quote show this week an almost universal tendency to appreciate, which suggests that our misfortune has been to some extent India's gain.

Decline in Palestine's Trade.

The figures for the external trade of Palestine for the first six months of this year compared with the totals for the corresponding period of 1925 show a slight decline in value of the imports and a sharp fall in the value of the exports. Imports totalled £E3,269,095 as compared with £E3,292,102, while exports were £E678,347 as against £E910,,615. If the imports are compared with the figures for the second half of 1925 the comparison is more unfavourable, the total for that period being £E4,240,045. The explanation of the decline in imports is to be found in the economic depression which developed in Palestine at the beginning of this year. From our point of view the most unsatisfactory feature of the figures is the marked fall in the proportion of British goods in the imports. While the percentage for 1925 was no more than 14½ as compared with 32 in 1921, it was only 11½ for the period under review. While it may be admitted that the decline is partly accounted for by the fact that all British goods imported into Palestine do not appear as direct imports there is no getting away from the fact that the returns show in an unmistakeable manner that our

traders for one reason or another have not been able to hold their own against the increasing competition in this market. Naturally as the various projects for development now on the tapis get under weigh, the position will be appreciably altered in our favour, but before it is possible to view the situation with complacency it will be necessary to feel assured that British goods are holding their own in the normal imports of the country. The fall in the export trade was due to two causes. The orange crop was smaller than before and the value of the exports for the season fell from £E592,000 to £E449,000. Then the trade in the other leading article of the export trade—soap, which is consigned to Egypt—was seriously affected by the fall in the price of cotton, a fact which affords a further illustration of the interdependence of countries in these days.

The Turkish Debt Question.

Rumour has again been current that before long negotiations will be resumed in Paris for a settlement of the Turkish debt question. I understand that it is quite likely that in this instance rumour will prove correct, for it is very much in the interests of Turkey to have this matter disposed of once and for all. But it is one thing to open negotiations and another to achieve a settlement, and it is impossible to feel any great confidence as to the result of a meeting since the gulf between what the bondholders desire and what Turkey is in a position to offer is very wide and will not easily be bridged. It is said that Turkey would be willing to pay £T900,000 yearly in respect of the Unified Debt, but the bondholders look for an amount which is more than two and a half times this figure. Supposing, however, that the lesser total (given that the figure be accurate), were accepted as a basis for a settlement, the problem still remains as to how the payment is to be made. That point is indeed the crux of the whole situation. Payments abroad presuppose credits abroad and credits can only be obtained by the development of a country's export trade. Turkey is certainly not in a position at present to undertake considerable foreign payments; when she will be able to is dependent on the growth of her trade—in present conditions a very uncertain factor.

The Cotton Surplus.

Once again the American crop report has occasioned a surprise. The last report had indicated a crop of 17,918,000 bales, but the report issued on November 22 gives a total of 18,399,000 bales excluding linters, so that including them it means that this season the American crop will approach 20,000,000 bales. The effects of this large production in present conditions are obvious. Low as cotton prices have already fallen they will go still lower, and the fall in the price of American, besides affecting the rates of other varieties, will naturally have its consequence in regions outside the United States where American cotton is being grown. It would perhaps be asking too much to imagine that people would be prepared readily to assume that this season's American crop has attained such record dimensions by accident. It might plausibly be advanced that America anticipated a general revival of world trade, and was trying to take advantage of it, but here too the argument seems to me to fail in view of the known astuteness of American business men. In fact one seems to be left with the hypothesis that, faced with the knowledge that this country is doing everything possible to develop the growing of cotton within the Empire in order to achieve freedom from dependence on the American crop, America is now endeavouring to produce as much cotton as possible in the knowledge that the effect on prices must be seriously to hamper the work of cotton growing elsewhere. I do not wish to do America an injustice, but that is how the position strikes me, and whether the American crop is of record dimensions by accident or not, certain it is that the existing surplus of cotton which ensures low prices for the commodity for many months to come—means a critical position in the history of cotton growing in the Empire. It will not affect the areas devoted to Sakellaridis except in so far as lower prices mean less profits, but with regard to American, the growing of which in the Empire is of vital importance, it is bound to have a marked influence, for the price of this variety is likely to leave little margin, and the effect of the idea in some regions that cotton is an unremunerative crop is likely to be serious. That is briefly the position that has to be faced, and it is certain that the next year or so will be a critical period in the history of cotton growing in the Empire.

NEW SUDAN COMPANY.

The Gedaref Railway and Development Company (Sudan) has been registered as a public company with a capital of £100, in £1 shares. The objects are to acquire concessions and other rights in the Sudan, Egypt, or elsewhere in Africa; to construct and acquire rights over railways, tramways, bridges, ferries, canals, roads, electric and gas works, docks, harbours, water works, telegraphy and other means of communication etc. The directors are:—E. C. Midwinter, Controller Sudan Government London Office; C. G. Hodgson, consulting engineer; H. Western, inspecting engineer; F. E. Charlton, general secretary Sudan Government London Office. The registered office is at Wellington House, Buckingham Gate, S.W.1.

An official estimate gives the yield of the Roumanian harvest as being 3,099,090 tons of wheat, 1,728,450 tons of barley, 1,223,040 tons of oats, and 302,250 tons of rye.

Commencing in January, the Henderson Line steamer Rangoon will inaugurate a monthly passenger and cargo service to London via Plymouth.

The traffic receipts of the Suez Canal from November 13 to 19 amounted to 3,940,000 francs against 3,680,000 francs for the corresponding period of last year.

Mr. Albert Charles Gladstone, of Ogilvy, Gillanders and Co., and a director of the Bank of England, has been appointed a member of the Committee of the Ottoman Bank in London to fill the vacancy caused by the death of the sixth Earl of Chichester.

Egyptian Markets, Ltd.—An interim dividend (No. 44) of 5 per cent. (less income tax at 4s. in the £) in respect of the year ending December 31, 1926, on the ordinary shares of this company, has been declared.

British Brown-Boveri, Ltd., London, have received a contract for a high speed electric locomotive in connexion with the electrification of the Bombay-Igatpuri and Bombay-Poona sections of the Great Indian Peninsula Railway.

YUGOSLAVIA IN THE NEW ECONOMIC EUROPE.

Before an attempt is made to discuss the subject of this article, some idea must be given of what is meant by the new economic Europe. It is by no means the same thing as the new political Europe, clearly characterised both during and since the War by the conflict of two opposing sides, whose differences are frequently settled by the intervention of the League of Nations. Neither is it the Pan-Europe of Count Coudenhova, or the Central Europe of Herr Naumann, nor again is it the United States of Europe discussed by others, which is a dream of the far distant future. The new economic Europe on the contrary is a present reality, formed by the more or less united front of almost all the European States. Europe is not yet an economic union, but consists of 28 States, which have an economic machinery too costly to withstand the competition of other continents, and which are trying to rally their forces to overcome their growing dependence on the latter.

Before the War, the position was very different. The other continents were the debtors of old Europe, which supplied them with manufactured goods of greater value than their raw material, and consequently had a growing credit with them. But by delivering large quantities of goods to Europe during the War the other continents not only paid off their debts, but also accumulated the greater part of the available gold and became the creditors of Europe. Europe's enormous debt to America, to be paid off in annuities, amounts to twelve milliard dollars. In Great Britain alone, labour will have to work (in theoretic figures) 76 million working days over a period of 60 years, in order to produce the goods necessary to pay off the debt to America. The question of payment of debts, however, is rendered much more difficult by the fact that for some years now the other continents have been preventing the import of goods from European States by means of high customs duties. The only way of paying debts is by exporting gold and goods, but in order to procure the necessary gold the European States are obliged to contract debts and sell the shares of large industrial undertakings. This has been done especially by Germany, which lacked credit. It must inevitably follow that the growing arrears of all these loans will force the States of Europe sooner or later to pledge the remainder of their production that has hitherto not become the property of foreigners.

This condition of growing dependence was accompanied by economic disturbances in the economic life of the European States, which occurred frequently, and were manifested in market crises and in great fluctuations of the exchanges. The gold remaining in Europe is no longer proportionate to the fiduciary circulation made necessary by the needs of the War, and any return to a sound currency is involved in enormous difficulties. While the dollar continued in the ascendant, the European exchanges suffered serious difficulties, and only after long and persevering efforts to restore public and private finances has it been possible for the States of Europe to effect some improvement in their currencies. These States may be divided at present into three groups:—

1. Countries whose currencies have recovered metal parity—Sweden, Holland, Great Britain, etc.
2. Countries which after the fall of their currencies have created new currencies, based on a gold standard, as e.g., Germany, Austria, Hungary, etc.
3. Countries possessing a paper currency which is not yet, or is only temporarily, stabilised. Among these are included Czecho-Slovakia and Yugoslavia.

Like every other country, Yugoslavia increased its fiduciary circulation after the War, without realising the disastrous consequences which this would have on the exchanges and on the whole national life. At the same time certain measures were introduced to prevent speculation, the rise of prices, and the fall of the dinar, which, nevertheless, were all only the logical consequences of the inflationist policy. The economic development of the new provinces, however, and the quick recovery of Serbia after the War owing to favourable economic conditions caused the country to make such rapid strides that some of the evil effects of inflation were not seriously felt. But this did not last long. What happened in Austria and Czecho-Slovakia did not take long to occur in Yugoslavia also, and to undeceive both Government and the business world.

The serious check suffered by the official financial policy of 1922, which caused a fictitious rise of the dinar, fol-

lowed by a serious fall on the Zurich Bourse, threatened to compromise the value of the dinar as a money unit, and this caused the Government to give its whole attention to fiscal and economic matters. First of all, it stopped inflation for the benefit of both the State and individuals. Its next effort was to make the foreign trade balance active, by abolishing or reducing the rights of export. It increased receipts from taxation, in order to balance the Budget, and on the other hand reduced State expenditure as far as possible.

The fact that at the same time as these changes were introduced the harvests were good caused the trade balance, which up to that time had been unfavourable, to become active in 1924 and 1925. Then, in order to prevent seasonal fluctuations of the exchange, the National Bank, in agreement with the Ministry of Finance, began to intervene on the Belgrade Bourse, buying bills during the export season, and selling them when export stopped. This intervention, together with the favourable trade balance, succeeded in stabilising the dinar provisionally at 9.10-9.20 Swiss francs per 100 dinars, and this stabilisation in its turn was a protection against any serious disturbances likely to arise from the constant rising and falling of the currency.

On the other hand, however, these measures had a restraining influence on credit. The National Bank reduced all the credits which it granted by ten per cent., and this caused a credit crisis, which was the more felt because financial relations with other countries were not yet sufficiently restored, and consequently the deficiency caused by the policy of the National Bank could not be compensated in this way. This credit crisis affects our whole economic life, but particularly oppresses industry, which has progressed faster than any other branch of economic life since the War. Other omissions have helped to accentuate the economic trouble, omissions both great and small, which have happened in all European countries, but some of which have had peculiarly harmful results on our economic position. The taxation basis for instance, which was made proportionate to the fictitious economic situation created by inflation, remained in force when the fictitious wealth was reduced to its proper value. To remedy this the Government has been obliged to resort to radical measures. The Minister of Commerce and Industry has drawn up an extensive scheme dealing with all present economic problems, and the Minister of Finance has done his best to make the receipts and expenses of the Budget which is now in course of preparation proportionate to the economic strength of the country. With this end in view, it is proposed also to abolish superfluous administrative bodies, and in general to reduce the burdens which weigh on national production.

Just as in Czecho-Slovakia, the general public is most concerned with the final stabilisation of the currency. It is evident, however, as it has already been shown in Poland, Belgium and elsewhere, that stabilisation cannot be maintained unless the economic life of the country has previously attained stabilisation also, and that, on the contrary, a premature stabilisation might have very serious results. Now, as has already been stated the economic stabilisation of Europe is confronted with difficulties resulting for the most part from its economic weakening owing to the competition of other continents. The separation of European States from one another by excessive protective barriers has made it difficult for them to offer more than a feeble resistance to this competition, since the question was not only one of customs, but of transport tariffs, laws for the protection of home industries, concessions for State supplies, protection of national labour, etc. In order to remove these barriers, and thus open the way to a union of the States of Europe, the League of Nations has organised several international economic conferences, and is preparing yet another for next year. The aim of these conferences is to make Europe understand that it is no longer the economic centre of the world, but that there are other centres, stronger and more formidable, which threaten her economic existence, and that it behoves the European countries to put their forces together to organise European produc-

Digitized by Google

tion on a more rational basis than at present, if they wish to withstand competition. As long as production is confined to small territories, it cannot be carried on so profitably as over more extensive areas. The States must, therefore, unite to form a unity equivalent to the territory of the competing continents. The conferences of the League of Nations to prepare the way for such a union have had very small practical results so far. There are some agreements which cannot be achieved through the discussion of commissions in international conference. It is quite a Utopian idea to try to create an economic union by means of a resolution or decision of a congress or conference. One need only have attended the simple negotiations for a commercial treaty between two States to obtain an idea of the difficulties to be surmounted. How much greater the difficulty would be of negotiations between all the European States at once. It seems, therefore, that the first thing to be aimed at is a European economic entente to be reached by degrees. The first stage might be either the conclusion of treaties on the basis of reciprocity, keeping in mind the possibility of a future unification of Europe as opposed to other continents, or else the conclusion of an entente in some branch of production, such as have already been prepared by means of international trusts and cartels. Such treaties between two States, or such organisation of great industrial enterprises, might serve as the basis for negotiations between the two States concerned and a third State, or of the industry with that of some other State or group of States, or even with another industry. This would gradually lead to unification on the basis of the treaties and agreements made. This seems to me the only possible way of attaining a closer collaboration between the States of Europe, for the purpose of improving their conditions of production and providing them with better means of resisting competition from outside.

G. CHURCHIN.

THE TRAINING OF AGRICULTURAL WORKERS.

The Yugoslav authorities are wide awake to the fact that the highly essential intensification of agriculture cannot be achieved without specialised training of agriculturists, and that intensive cultivation must depend on the number of expert landworkers.

The problem of giving expert training to the mass of small holders is a very difficult one. First of all, it is difficult to obtain the large amount of capital necessary for the maintenance of a sufficient number of primary agricultural schools. It is no less difficult to find men understanding modern farming who are willing to leave their land for longer or shorter periods and undertake the management of agricultural schools. It is necessary, therefore, to draw up a system of training peasants, which would be cheap and at the same time would not necessitate that during the period of his training the peasant should be obliged to leave his land.

The problem arose even before the War, especially in Croatia, which was financially dependent on Hungary, and consequently was quite unable to obtain the budgetary means for the training of peasants. The need of training was felt most acutely there when there came about a movement for cattle and plant selection, and for the use of artificial manures, agricultural machinery, etc.

The system of primary agricultural schools met with steadily keener criticism, all the critics proving that such schools were failures. The chief failure lay in the fact that young peasants who passed through such schools did not undertake work on the land, but became clerks, policemen, officials, etc. For this some remedy had to be found. Some thought that the training ought to be longer and more thorough, in order to fit the pupils exclusively for agriculture. Others were of the opinion that they should have completed their course before being of the age for the police force, army or official work, which would sever them from agricultural life. There were also various other suggestions, but no one of them was able to solve the problem of *training the mass of small holders in a relatively short time, and at as small a cost as possible, so that they remain on their land during the period of their training.*

The writer of this article has been studying this problem ever since 1908 and before, and offers the following solution:—

Short courses, of three months at the most, should be held in the villages during the winter months. In order that the cost might be small, the lectures should be held in the elementary schools. The lecturers should be State officials from the neighbourhood, primarily agricultural experts, and secondarily veterinary doctors, lawyers, foresters, etc. Should the lecturers come from another district, they should be paid their expenses and maintenance. If they could not come daily, it would be sufficient for lectures to be held three times a week for three months. All peasants, irrespective of age, should be admitted to the courses, inasmuch as it is essential that the holders of the land should attend, for only in that way can the principles of modern farming be applied immediately on the peasant holdings. Such winter courses should be held in a different village each year, so that after a term of years the course might be repeated, in each place.

The first winter course of the kind was held in 1908 in the village of Sv. Ivan Zabna, near Krizevatz. It was extremely successful. Peasants of all ages from 14 to over 50 attended. It had an excellent and immediate effect on the rearing of cattle, tillage, the use of selected seed, artificial manure, etc. In the very first year, this village set up model cattle stables, and in the next few years the peasants of the neighbourhood built some hundreds of stables on that pattern on their holdings. The authorities were amazed at the advanced knowledge of the peasants after so short a time, when they attended the examination of this first winter course.

This first success was followed by a number of similar courses in other villages, and in a few years 50 courses of the same or a similar type were held. The lecturers were so ambitious about their work that they worked out new variations of the courses. The co-operative unions also influenced the Government to found more and more convenient forms of winter courses. The peasants also sent petitions for them to the Government, 500 of such petitions being received in one year. During the War this good beginning had to be abandoned, and for the first few years after the War it was found impossible to renew the courses. This year, however, the Ministry of Agriculture has taken the initiative into its own hands, and has inaugurated the first two winter agricultural courses in villages near Bitolye. The courses will last six weeks, and will be held by State officials from the district. The courses will be followed by an examination and by visits to model farms.

I am convinced that this system will progress with the same rapidity as before the War, since the Ministry of Agriculture has determined to pay special attention to this method of educating the mass of small holders, because it is both efficacious and cheap. Moreover, applications are beginning to be made by the villages themselves for the holding of such courses.

DR. LIUDEVIT PROHASKA.

CROP REPORT.

October 1 to October 30, 1926.

General Condition.—The general condition of sown winter crops is good on the whole.

Weather.—The first half of October was fairly dry and steady. There were some heavy rains and winds in the Liubliana district; elsewhere small local rains, but fine weather for the most part. The second half of the month was more changeable, with more rain and some snow in the higher regions. Hail fell in the districts of Mostar, Vrbas and Split, but did little damage. The colder parts

Digitized by Google

had some frost. The dry weather caused a cessation of sowing of winter crops in some districts, so that the rains in the latter fortnight were welcome.

Field Work.—Almost all work connected with the harvest of the autumn crops has been completed. Maize is harvested, as well as the sugar beet and mangold, potatoes are dug, beet has been transported to the markets, other vegetables and root crops are gathered, ground has been prepared, fields are manured, winter crops sown, the vines banked and grafted, the later fruits gathered, etc.

Vineyards.—The vintage is completed. The yield has fallen off somewhat owing to some insect pests. In some places hail did damage.

Orchards.—Apples, pears and other late fruits are gathered. Both the earlier and later varieties were good. In some places blight occurred on the apple and other trees, but no very great harm was done. Of the Mediterranean fruits, the olive has given a somewhat larger yield than last year, although there was a decrease in the district of Split. The olive harvest is in full swing.

Cattle.—The condition of cattle is satisfactory, there is a sufficiency of fodder. Cases of anthrax and swine fever are rare.

YUGOSLAV EXPORTS: SEPTEMBER 1926.

Other cereals.—Greece 0.8; Austria 0.3; Italy 0.2.

Cement.—Greece 0.4; Egypt 0.3; U.S.A. 0.1.

The total exports of Yugoslavia during the first nine months of 1926 amounted to 3,666,207 tons, valued at 509,252,232 gold dinars, as compared with 3,229,823 tons valued at 591,435,102 gold dinars for the corresponding period in 1925—an increase in quantity of 436,384 tons or 13.51 per cent., but a falling off in value of 72,182,870 gold dinars or 12.41 per cent. This decrease in value was due to the fall in the prices of agricultural products during the last twelve months, and to the rise in the value of the dinar this year.

THE MONOPOLY ADMINISTRATION.

For the five months ending August 31, 1926, the Yugoslav Monopoly Administration shows receipts amounting to 1,059,855,686 dinars as compared with 1,009,979,360 dinars for the corresponding period in 1925, and an estimated revenue of 1,002,041,667 dinars. To the total the Tobacco Monopoly contributed 753,762,223 dinars; salt, 133,634,348 dinars; kerosene, 51,905,306 dinars; matches, 57,759,568 dinars; and cigarette papers, 60,330,605 dinars.

The statement of revenue and expenditure issued by the Monopoly Administration for the first five months of the financial year was as follows:—

REVENUE.	Dinars.	EXPENDITURE.	Dinars.
Monopolies (August)	220,477,237	5% Loan (1902)	21 338,722
,, (April—Jnly) ..	839,378,449	Blair Loan (1922)	34,629,222
Customs (August)	138,682,153	Administration Expenses ...	312,257,862

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 23.

The Stock Exchange has spent a quiet week. The continued rise in the franc has proved a bad influence for Paris has been selling its favourite securities freely in Throgmorton Street. The coal position still, however, dominates the market position. Should a more or less general resumption of work take place quickly, it is logical to suppose that the public will feel more inclined than of late towards investment and speculation, and that markets will assume a brighter appearance. The necessity for tempering optimism with caution is, however, clearly revealed by a review of price movements during the coal dispute. For the best part of seven months the industry of the country has been severely handicapped and the nation has been subjected to grievous losses. But, so far from falling, the general level of Stock Exchange values is higher to-day than it was before the trouble began. British Government stocks, and fixed interest securities generally, stand very much where they stood on April 30th; but the *Bankers' Magazine* index number of variable dividend securities actually rose from 128.7 in April to 134.4 in October. The market value of 38 representative industrial and commercial shares which was £457½ millions in April was nearly £465 millions in October. In view of the widespread losses suffered by a great variety of industrial and commercial companies, one is contrained to pause and ask how many of these 38 representative companies are really likely to be able to maintain their dividends in respect of the current year. Calm consideration of that question suggests the belief that in view of all the circumstances many industrial and commercial shares are fully valued, or even over-valued to-day. That, at any rate, is a distinct possibility, and it follows that investors who favour industrial shares when the coal dispute is over need to exercise a wise discretion in selecting their securities.

HARTLEY WITHERS ON INVESTMENTS.

"Owning investments is very much like owning a motor-car, in that in each case the question whether one should try to know anything about one's possession can be debated at length. As long as the car will go, why should one bother one's head about what is happening inside it? As long as a man's investments bring him in a decent income, why should he weary his soul by trying to understand the difference between debentures and preference shares or bewilder himself with the mysteries of reports and the obscurities of balance-sheets?

"But both the car and the income must have constant care and attention if they are to do their best for their owner, and in the matter of investments there is nowadays a large number of people who seem to think that the choice and management of securities is a thing that any amateur can handle for himself and make most grievous mistakes in consequence of this delusion. There never was a time when it was more important that mistakes in investment should be as few as possible. Bad investments are in these days not only a serious inconvenience to their owner but a drag on world revival."—Copyright reserved.

The Case of Home Rails.

The need for a careful scrutiny of the position arises particularly in the case of the junior Stocks of the four great British Railway Companies. The *Bankers' Magazine* computation, referred to in the preceding paragraph, shows that the market value of thirteen ordinary stocks has risen slightly since the beginning of the coal stoppage, despite the fact that the railways have been very hard hit, the loss of traffic during the period amounting to some £26 millions. It must be admitted at once that the stability of prices is more apparent than real, for with the reductions in the interim dividends at midsummer, prices receded, and it is only in the past two months that the market has improved on prospects of a trade revival after a coal settlement. So far as the immediate outlook is concerned the chances of a repetition of last year's dividend next February are very remote indeed. But taking the longer view the prospects are more propitious. When the companies are able to earn the "standard revenues" ordained by the Railways Act of 1921 they will have total receipts some £8 millions in excess of 1925 revenue, and if these are fully distributed they would give, after payment of all prior charges, a dividend of over 4½ per cent. on L.N.E.R. deferred stock, of 7¾ per cent. on L.M.S. stock and of 3¼ per cent. on Southern deferred. The Railway Rates Tribunal is now engaged in fixing the standard charges at such a level as will yield the standard revenue. It has not yet fixed the date as from which these charges are to become effective, but the summer of 1927 and January 1928 are regarded as the earliest and remotest dates respectively. The companies will, of course, soon be reaping the advantages of certain important savings, the principal of which will arise from the benefits of amalgamation, which are now only beginning to be felt, and from staff economies resulting from the failure of the general strike. The foregoing considerations are perhaps partly responsible for the apparently high figures at which home railway ordinary stocks stand, for if a long view be taken they are not over-valued.

The Outlook for the Electrical Industry.

During recent years the electrical industry has been one of the few bright spots in British industry and accordingly we have recommended the securities of certain manufacturers. The British Electrical and Allied Manufacturers' Association has now published an informative survey of the electrical industry. While the conclusion is reached that the prospects of electrical manufacturers might be considered rather less promising than a year ago, attention is drawn to factors which relieve the outlook from actual gloom.

The coal shortage has stimulated interest in electrical equipment and the view is expressed that, granted better financial conditions, this interest might very soon be strengthened into demand. The tendency towards amalgamation it is considered, might widen and thus render possible modernisation and extension of manufacturing equipment. The high level of fuel prices might, states the report, furnish sufficient resources to allow mining concerns to instal new equipment. Summing up the position, the report declares: "Improved competitive conditions in overseas markets, the realisation of the provisions of the new electricity supply legislation, the immediate release which the passage of the Bill into law and the adoption of the National Scheme of co-ordination, already elaborated, will give to new power-station schemes in the Midlands, Lancashire and London and the quickening of power development in the world after a period of consolidation in 1925 and 1926, indicate, however, that pessimism is not wholly justified."

The restrictions in Roumania on the uses of private code for telegrams were removed on November 1.

Bonds of the Roumania Four per Cent. External Loan of 1922 drawn for repayment and coupons falling due on December 1, 1925, should be presented for payment at the counting house of Helbert Wagg and Co., Ltd., 41, Threadneedle Street, E.C.2, between the hours of 11 and 2 (Saturdays excepted). Drawn bonds and coupons must be left three clear days for examination.

TRADE DEVELOPMENTS AT ADEN.*

(Concluded from page 591.)

Gum Trade Important.

The gum trade of Aden is perhaps the most ancient traffic of the Middle East, with a colourful and romantic history dating back to Biblical times. The chief items are frankincense, myrrh, benjamin, and resin, collected in the west from Ethiopia and in the east from Oman via Maskat, and sold to the Far East, Turkey, Europe, and the United States.

Demand for Maria Theresa Dollars.

The large amounts of bullion and coin appearing in Aden trade is largely explained by the fact that the item "treasure" consists mainly of Maria Theresa dollars, minted in Austria and imported to the extent of about 1,000,000 per month, for distribution to Ethiopia and Arabia. Coin or currency in any other form is not accepted by the indigenous peoples. The Maria Theresa dollar is in reality more a commodity than a currency, as it is not the national currency of any country and is bought and sold like any other merchandise. In Ethiopia, particularly, it is melted down and remolded into trinkets of all kinds, there being no rule against its mutilation or destruction.

To be valid, this dollar must meet many curious requirements from the natives. For example, it must bear no other date than 1792; the brooch on Maria Theresa's right shoulder must be clear and complete; the decorative milling must be visible; the coin must be as bright and shiny as possible, although the duller coins are usually accepted; worn coins are not desired, but weight is not closely examined. The millions of coins imported by the Ethiopian Government, by the Bank of Abyssinia and by private individuals are completely swallowed up in the country, since there is very strict prohibition against their export.

Markets for Motors and Electrical Supplies.

Import trade in automobiles has developed rapidly since the War and has exceeded all expectations, an increasing demand being evident in the adjacent Arabian districts of Makalla and Yemen, and in the nearby African regions of Ethiopia, British Somaliland, and Eritrea. Ethiopia in particular is a newly opened and highly promising market.

At present a most promising new market is developing for electrical appliances. Installations are being made on a very large scale and current became available at the beginning of 1926, with the result that the demand for fans, cooling appliances and innumerable novelties is rapidly growing. So far, German goods have a considerable price advantage on this market.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

A ROUND-THE-WORLD CRUISE.

The Canadian Pacific liner s.s. Empress of Scotland left Southampton on November 20, under the command of Capt. R. G. Latta, on her round-the-world cruise of approximately 36,000 miles. Some 100 passengers from all parts of Great Britain embarked and other contingents will join at Quebec and New York, whilst quite a number of British passengers will leave London on December 14 in order to connect with the Empress of Scotland at Madeira, Monaco, and Naples, etc. Nearly six months will elapse before the steamer returns to Southampton previous to entering upon her regular service on the Atlantic, and during that time the world tourists will have spent Christmas in the Holy Land and New Year's Eve in Cairo, visited 22 countries and called at 30 ports. One of the new features of the Empress of Scotland on the present voyage is a magnificent new electric laundry with a staff of some 30 persons, which can handle thousands of pieces of linen each day whilst the vessel is on her trip.

On January 29 the Canadian Pacific liner Empress of France will leave Southampton for New York and a Mediterranean cruise. British passengers can also join the steamer at a Mediterranean port if they so desire. In addition to the above, the Canadian Pacific have organised two West Indian cruises by their liner the Montroyal, sailing from New York on January 26 and February 28. So popular have these cruises proved that a feature of the 1928 arrangements is a new cruise by another "Empress" steamer sailing from Southampton via New York to South America, then to the Union of South Africa, British East Africa, etc., thus linking up other component parts of the British Empire.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Media for Port Said, Colombo, Madras, and Calcutta (London, November 27); s.s. Imani for Port Said, Colombo, Madras, and Calcutta (London, December 11).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (Birkenhead, December 1).

British India Line.—S.s. Malda for Colombo, Madras, and Calcutta (London, December 4); s.s. Rohna for Bombay and Karachi (London, December 11).

Cunard Line.—S.s. Tyria for Casablanca, Gibraltar, Malta, Corfu, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Glasgow December 8, Liverpool and Swansea December 11); s.s. Pavia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Venice, Trieste, and Fiume, also at Ancona if inducement (Liverpool December 24, Swansea December 28).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 1).

P. and O. Line.—S.s. Ranpura for Bombay (London, December 3); s.s. Nankin for Colombo, Madras, and Calcutta (London, December 11).

Prince Line.—S.s. Cyprian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Famagusta, Larnaca, and Limassol (London, December 1); s.s. Algerian Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (Manchester, December 21).

Ellerman and Papayanni Lines.—S.s. Flaminian for Algiers*, Malta, Syra, Smyrna, and Constantinople (Liverpool, December 1); s.s. City of Lancaster for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 11); s.s. Serbino for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 22); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 31); s.s. Assyrian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 1). * Subject to sufficient inducement. Transhipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

The amount of the drawback on cigarettes exported from Egypt has been increased from 60 piastres tariff to 80 piastres tariff per kilogramme.

A NEW PERSIAN RAILWAY PROJECT.

(From a Correspondent.)

In an article which appeared in THE NEAR EAST AND INDIA in the issue of April 23 last year I gave a brief account of all the Persian railway projects which had been in train at different times. In the intervening period matters have undergone a material change, and under the new Dynasty a new railway project has come into being which has for its object the linking up of Mohammerah and the Persian Gulf with Enzeli on the Caspian Sea. As it would appear that this project has a very good prospect of realisation, I think it worth while to refer to it in some detail.

In all the former projects Bushire, Bunder Abbas, and Chahbar were indicated as the southern starting points for a railway across Persia—but the two first-named ports have very unsatisfactory harbours, while Chahbar is too far from the centres of Persian commerce. Mohammerah, however, is very differently situated. It is on the junction of the Karun river and the broad and navigable Shatt-ul-Arab. Owing to the operations of the Anglo-Persian Oil Company this little Persian town has greatly developed, and with the construction of the projected railway might become the most important Persian port of the Gulf.

The particulars of the conditions under which the railway is to be built are not yet sufficiently known. It appears, however, that American contractors have received a concession for the construction and exploitation of the said railway; as the line is to be prospected and built by American engineers, most probably all the railway material as well as the necessary capital will be supplied by America.

In view of the great difficulties that will be encountered in the construction of the line in the mountainous district of Luristan, a very important point is what direction the line from Mohammerah is to take. The shortest road, and perhaps the easiest would certainly be via Hamadan and Kasvin to Resht; but as it would be hardly satisfactory to omit from the route such important commercial and administrative centres as Ispahan and Teheran, it is more probable that the survey for the line will practically follow the direction towards Ispahan.

The following is a short account of the character of the country through which the railway may pass. From Mohammerah via Ahwaz, Wais and Shustar (410 ft.) to Dizful (660 ft.), parallel to the pipe-line of the Anglo-Persian Oil Co. on the eastern side of the Karun river, is a distance of about 150 miles of plain land, which does not present any difficulties of terrain for the construction of a railway. Further on the country changes its aspect, as the whole region consists of a number of parallel, and more or less elevated, rocky mountain chains, between which some rivers wind. A continuation is possible from Dizful along the banks of the Ab-i-Diz river and its tributaries from the right side, named Top-i-Kazal and Chal-i-Kodi, though their course is geographically still unexplored; but as they flow from the valley of Burujird it might perhaps be possible to run the line along their shores up to the town of Burujird. From this place the line must either run towards Sultanabad and then follow the carriage road to Hamadan, or in the direction of Nehavend, Kangavar, Asadabad, and Bahar to Hamadan.

From Hamadan to Kasvin the territory is much less complicated, and to avoid the Karaghan mountains over which the chaussée road now passes, the railway ought to be constructed along the road from Hamadan over Maran to Zendjan as far as the upper part of the Har-rud valley and down the valley to the Kasvin plain.

As regards the route to Ispahan, there are several ways which might be considered; but here too the mountain region is very insufficiently explored, and therefore it is difficult to decide which might be the most practical one for the construction of the railway.

From Mohammerah to Behbehan is about 140 miles, and as the altitude of the latter town is 1,300 ft., it is evident that the plain is only gradually rising, and does not present any obstacles. Further on the country is cross-cut by a considerable number of mountain ranges. Following the winding valleys, the road would pass from Behbehan to Deh-i-Dasht (2,850 ft.) thirty miles distant; then 20 miles to Safid-ab (4,120 ft.); 30 miles to Madalan; 40 miles to Rasaki (pass of 7,850 ft.); and then 45 miles to Yazdikhast (6,800 ft.), which is situated on the caravan and post road from Bushire and Shiraz to Ispahan. From here the line would run 40 miles to Kumeshah and 45 miles to Ispahan (5,330 ft.). The route from Yazdikhast to Ispahan would be on nearly level ground.

The Dizful-Ispahan route would be perhaps preferable to the former, as it would pass the oilfields. From Dizful (660 ft.) along the banks of the Ab-i-Diz river to Sar-i-Kul (4,400 ft.) would be about 55 miles; then 50 miles to Raisan and a mountain pass of 8,666 ft. elevation. If this mountain obstacle can be somehow avoided the remaining 130 miles to Ispahan would be along the well-populated valley of the Zindah-rud.

Which of these two routes is the more favourable for the construction of a railway remains to be discovered by exploration; it is, however, possible that even a more favourable way could be found.

From Ispahan the road would pass in a northern direction over an extensive, slightly rising, plain, about 70 miles to Natanz (6,060 ft.), then through a short defile and across plain ground 45 miles to the town of Kashan (3,260 ft.); 55 miles across level country to Kum (3,200 ft.); then over the Kara-su river and rounding the mountains from the west, which surround the salt lake Hanzi-Sultan-Kevir from this side, reaching 45 miles in the village of Pik (3,960 ft.) and after another 45 miles along the caravan road from Hamadan to Teheran (3,865 ft.).

Between Teheran and Kasvin is level ground for about 100 miles, and the railway would also have the advantage of passing quite near the coalfields of Ardaha. Feshend, Khiv, Chamburak, and Ab-i-yek, which if properly worked, could supply both towns with cheap fuel for the local industry, and be the means of developing new industries.

This last part of the road is not without some very serious obstacles. About 25 miles west of Kasvin it is still level country, then comes a range of low hills, and

Digitized by Google

after that for a distance of only about 5 miles between these hills and the valley of Yusbash-chai on the Molla-Ali river, the difference of altitude is up to 2,000 ft., and as there is no way to avoid this place, it seems that the only possibility in the direction would be to construct the railway in winding serpentines through the hilly valley of Yeliabad, leaving the present post road from Kuhin-Bakendi to Yusbash-Chai to the north. From the present station of Yusbash-Chai as far as the broad valley of the Shah-rud river it is 20 miles and the difference of altitude is about 200 ft.; at the same time the Molla-Ali valley is very narrow and the sides consist of steep falling volcanic rocks. Less difficulties would be met with from the station of Pa-i-Chinar, where the Molla-Ali river joins the Shah-rud, as far as Manjil; but from this place along the rocky valley of the Safid-rud river as far as the village of Imam-Zadeh-Khashim, a distance of 50 miles and about 1,200 ft. difference in altitude, the railway construction would encounter considerable difficulties. From Imam-Zadeh-Khashim to Resht and Enzeli is level country, but it is partly swampy.

There can be no doubt that a railway across Persia would greatly help to develop the productivity and industry of the country. A considerable number of mines, situated in the sphere of the projected railway, which cannot be worked for lack of cheap and effective communications, would be exploited and many rich ores which, in consequence of the scantiness of fuel, have remained useless in their beds, would find their way to the European markets.

MARVELS OF MODERN PHOTOGRAPHY.

A Mechanical Air Observer.

A new science was born with the War: that of air photography. That this science did not die with the Armistice is very evident from an inspection of an interesting piece of apparatus demonstrated to representatives of the Press by the Aircraft Operating Company, Ltd., for the selling agents, Messrs. Vickers, Ltd. This apparatus is part of an exhibit prepared by the Aircraft Operating Company for the delegates to the Dominion Conference at the request of the Secretary of State for Air, and will be used by that company for the air survey contract which they are about to carry out in Northern Rhodesia. Nothing more unlike the usual conception of a camera could well be imagined, but on inspection of the information photographically recorded on every picture one would expect to find an even more elaborate mechanism.

With a single loading of the camera one hundred exposures can be made automatically at exactly the right interval of time so that consecutive pictures match correctly to form a continuous strip map from 100 to 500 miles long. Further, on every photograph is recorded the exact hour, minute, and second of exposure, the height at which the aeroplane is flying, the angle of inclination to the ground beneath, a serial number, the scale, type of aeroplane used, date, and in fact all the information likely to be of assistance for surveying or map making.

These records and also the various operations of the camera, such as setting the shutter, winding the film, etc., are all controlled from a small switchboard some distance away from the camera, usually in the pilot's cockpit. This switchboard, no larger than a cigar box, gives an indication to the pilot of the functioning of the various movements of the camera, and a red lamp, not unlike the tail lamp of a motor car, warns the pilot that a photograph is about to be taken so that he may keep the aeroplane as steady as possible during the exposure.

As the camera has been designed for mapping unexplored territory, every precaution had to be taken against stoppages. Normally the mechanism is driven by an electric motor, but should the current fail, the mechanism can be driven by an air propeller and failing that, by hand. The method of supporting the camera in the aeroplane is worthy of special note. Various adjustments are provided so that the camera may be set at any desired angle to correct the changing position of the aeroplane to the horizontal. The camera may be rotated in its supports to allow for drift due to a side wind.

The "Eagle" Air Camera, as it is called by its inventors—the Williamson Manufacturing Co., Ltd.—may truly be said to mark a distinct advance in air photographic survey. By its use large tracts of country can be accurately mapped at a cost comparing most favourably with ground surveys and with an immense saving of time.

A number of these cameras are already in use by the Royal Air Force, by whom it is known as the Service Type F/8, and it is satisfactory to know that with regard to air photography at least we have established a lead which in all probability will shortly be followed throughout the world. The actual model shown was used by the Aircraft Operating Company on the revision work which they carried out for the Ordnance Survey. They were so satisfied with the experience gained in the use of the camera that they are now making the camera part of the standard equipment of their Northern Rhodesian Air Survey Expedition.

THE EARLDOM OF CHICHESTER.

A sad fate has befallen the house of Chichester. Following the death of the sixth Earl on November 14 comes the news of the death from pneumonia of his son, the seventh Earl, only eight days after the decease of his father. The sixth Earl of Chichester, who was born in 1871, had taken a prominent part in City affairs. He was a member of the Committee of the Ottoman Bank in London, and was also a director of the Union Bank of Australia. The heir to the title is the younger brother, aged 14 years, of the seventh Earl.

INDIAN TEA DIVIDENDS.

British Assam Tea Co., Ltd.—Interim Dividend of 10 per cent., less tax, payable on December 1.

Imperial Tea Co., Ltd.—Interim dividend of 7½ per cent., less tax, payable on December 7.

Dooloogram Tea Co., Ltd.—Interim dividend of 5 per cent., less tax, payable on December 7.

A USEFUL CALENDAR.

A useful little calendar for 1927 has been issued by Messrs. E. Marlborough and Co., Ltd., of 51, Old Bailey, E.C. 4, at the price of 3d., postage 2d. extra. It gives the number of week days in each quarter, postage rates, quarter days, and bank holidays, besides inset calendars for the present year and for 1928, and should be a most valuable addition to the desk of the business man.

The North British Locomotive Company, Glasgow, has received a contract for ten locomotives and tenders for the Sudan Government Railways.

A Reuter message states that the Turkish Government has submitted to the National Assembly a Bill modifying the consumption tax. In place of the 2½ per cent. stamp at present obligatory in all transactions, a 6 per cent. tax will be levied on all articles manufactured and sold in the country or imported from abroad. All banking and insurance operations will be subjected to a tax of 2½ per cent.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended November 11, state:—

Since our last report the futures market has been steady for both Sakel and Ashmouni, and fluctuations have been within narrow limits. The week's summary of price movements is as follows:—Sakellaridis: November, 26.07 dollars, 0.32 dollars up; January, 25.92 dollars, 0.27 dollars up; March, 26.12 dollars, 0.17 dollars up; May, 26.32 dollars, 0.12 dollars up; November 1927, 26.72 dollars, 0.07 dollars up. Ashmouni: December, 17.47 dollars, 0.12 dollars up; February, 17.70 dollars, unchanged; April, 17.85 dollars, 0.10 dollars up; October 1927, 18.82 dollars, 0.22 dollars up.

Sakel.—The market has been rather quiet but the undertone has been good. The publication on the 8th inst., of the American Bureau Report estimating the American crop at 17,918,000 bales against an estimate of 17,454,000 bales a fortnight ago did not have any effect on our market; the enormous figure of the estimate had been anticipated and the slight rise in New York after the publication of the report rather improved the feeling here.

The export houses are, generally speaking, long of futures against sales to spinners; on the other hand, the banks and the merchants are short against unsold stocks held by them, whilst there are also some straddle sales open, mainly for account of Liverpool, by straddlers who have sold Sakel against purchases in New York.

The demand from abroad has been slightly better this week; Lancashire and the Continent have been the principal buyers. America, up to the present, has shown very little interest in Sakel. We do not look for much movement in prices in the near future. We consider present levels are fairly reasonable and think that the demand from spinners will prove sufficient to hold the market even against the pressure of the arrivals which must necessarily continue to be heavy for still a few weeks.

Uppers.—The market for this variety has been relatively firm with a very fair turnover. Spinners continue to buy large lines and prospects are, as for Sakel, for prices to remain steady at about present levels.

The week's receipts amount to 360,755 krs. against exports 195,492 krs.; the stock in Alexandria stands at 2,212,339 krs.

Spot.—During the past week we have had a rather better spinners' demand and more active markets at Minet-el-Bassal. Sales amount to about 31,700 bales, of which we estimate 12,700 bales Sakellaridis, 17,600 bales Ashmouni and Zagora, 1,200 bales Pilion, 200 bales White and a few bales of Brown.

Sakellaridis.—A good business has been done covering all grades. Spot differences are easier for the lower styles, without much change for the medium grades, and inclined to harden for the top qualities. Extra qualities still continue to bring very high premiums.

Ashmouni and Zagora.—Zagora is not in very good favour, but a good business has been done in all styles of Ashmouni, especially the medium grades. Spot differences are unchanged, except for Good and above, which are somewhat dearer.

Pilion: has been in improved demand and a good business has been done at about last week's parities.

Brown.—A retail business has been done without change in prices.

White.—A moderate business has been done. Spot differences are unchanged.

Crop 1926.—The weather since the end of September has been ideal, and the plants have been giving cotton right up to the topmost bolls, as a result of which the yield per feddan of the Northern districts of the Delta has substantially increased. Picking is practically finished everywhere, but the interior movement is relatively slow, firstly because the small merchants have not the means to work except on a very small scale and, secondly, because the large cultivators, considering prices too low, are holding back their cotton.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended November 17:—

Egyptian Futures.—Sakel Contract.—Again we have to comment upon a week rather bare of special features and also showing an absence of any fluctuations of note. The market at the moment appears to have struck a mean level period, and on this account is failing to attract fresh speculative business. Activities on the "long" side are restricted by the weight of supplies and fears of increasing pressure as the crop movement reaches its peak; on the other hand, short commitments are not in favour, owing to the relative cheapness of our contract in comparison to the overseas market and to its heavy discount with spot values. The gradual covering of the fairly heavy local speculative short interest has been in operation for the past fortnight, and, with fresh offerings from either hedge or other sources rather restricted, this offtake has been sufficient to hold values and at the same time conserve a very steady undertone. Whilst obviously the whittling down of the "short" account makes for a weaker technical position, there appears to be sufficient January cotton required at 13.00d. and slightly below to hold the market for the time being. Throughout the week, Alexandria has shown a relatively firmer tendency, with the result that the more distant options in the local contract have again reverted to a discount. At present differences, importing, except at prohibitive premiums, is quite out of the question, and apart from consignments which are of no great importance little unsold cotton is heading for this side. The recent improvement in trade reports has been maintained, and spinners' operations continue on a freer basis; probably some of the buying is of an anticipatory character, and the tendency for advances to restrict the offtake remains in evidence. We still consider that for the immediate future, prices will show unimportant movements and would not advise commitments until a more decided view of the outlook can be obtained.

Upper Contract.—We have had one or two sessions without a transaction in this contract, and on the days that trading has taken place, the business has been quite unimportant. Prices throughout the week have remained at a steady level; in addition to a further improvement in the trade demand the resistance latterly displayed by the American markets has been a sustaining factor.

Egyptian Spot.—Business has continued on very quiet lines, and variations in price have been only fractional. In spite of the improved tone which has recently been a feature of the early reports from Manchester, spinners of Egyptian counts still complain of the lack of offtake, and, as a natural corollary, of the high price of Egyptian cotton as compared with American. Until recently, the opinion has generally prevailed here that Egyptain prices were likely to aproach nearer to American, but the two markets have remained so steady, at round about current differences (say 625 points) that doubts are now being expressed, in more than one quarter, as to whether any further narrowing will be seen. The unknown quantity, of course, is the stock of Sudan held

JOHNSTON LINE

and FURNESS, WITHY & CO., Ltd., Royal Liver Building, Liverpool

Digitized by Google

here. Should tenders of this cotton mature in any quantity, a further shrinkage in the difference between the near months is highly probable.

Sakellaridis has been in moderate request for practically all qualities. For Upper cotton, the inquiry has shown a tendency to lift from F.G.F. quality to the Good and Fine, whilst at the lower end of the scale certain spinners at from 7½d. to 8½d. White Sudan has been in fair request at from 50 to 175 on, and Sudan Sakel has met with a fairly good offtake at steady rates. Oother growths have been neglected.

The Continent has continued its display of mild activity, to which we drew attention last week. Only a moderate business has been done in cotton for forward delivery, the brighter news regarding the coal situation having attracted little fresh business up to date. Forwardings to spinners for the week ending 12th inst. were returned as 4,770 bales Egyptian and 1,039 Sudan. Estimated sales 1,100 bales Egyptians and 1.550 Sudan. Quotations of Sakel show an advance of 20 points on the week, whilst those of Upper remain unchanged. F.G.F. Sakel, 15.00d. F.G.F. Upper, 10.50d.

SUDAN TRADE NOTES.

The quarterly report on conditions in the Sudan, issued by Barclays Bank (Dominion, Colonial, and Overseas) gives the following particulars:—

The early rains of the season were generally sufficient to enable good crops to be sown, but a drought, extending over the greater part of the country during August and September, seriously affected late sown durra, particularly north of Wad Medani. The results, although very poor, will not be as bad as in 1925. South of Wad Medani, crop prospects are reported to be good. There will be a decrease in the area sown with American cotton-seed between Singa and Hassa Heissa, as the results last year were very bad, but in the Southern Provinces, all encouragement is being given to the cultivation of this type of cotton, as the rains there being heavier, the cotton stands a better chance of success. The difficulties and cost of transport in that district are to be relieved by the erection of ginneries, and a commencement with four is now being made. The outlook for cotton grown in the neighbourhood of, and to the north of, Khartoum, is, so far, poor. In many instances, the supply of water permitted to be drawn from the Nile is limited, and owners of estates have to be content with growing American seed cotton, instead of the more remunerative Sakellaridis.

The export of gum has been greater than in previous years. From January to September, 1926, 18,992 tons were sent out of the country, while the figure for the same period last year was 15,114 tons. Prices paid by overseas buyers, however, have not been good, and the financial results show little variation. There is scarcely any movement in sesame and in ground nuts, while the ivory market is absolutely stagnant.

Imports of motor cars show a notable increase and agencies have recently been obtained by local firms for makes—mostly American types—new to the Sudan. Travel by motor car is greatly increasing in favour, and a rapid displacement of camel and native carts by light motor lorries for the transport of goods is also taking place.

Work on the Khartoum-Omdurman bridge is being regulated to keep pace with the supply of steel, delivery of which is being delayed by the coal dispute in Great Britain. Three spans have now been completed. The continuation of the railway from Kassala to Gedaref is to be started immediately, in addition to the extension, by 150,000 feddans, of the Gezira irrigated area.

Twelve Soviet merchant vessels *en route* from the Baltic to the Black Sea arrived in Constantinople last week.

GROWING MARKET FOR TRACTORS IN ROUMANIA.

The breaking up of the great landed estates under the provisions of the expropriation law and the division of the land among the peasants in small tracts has prevented Roumania from being one of the great tractor markets of the world (says an American Cousular report). The owners of estates of thousands of hectares (1 hectare equals 2.47 acres) have had their holdings reduced to amounts ranging from 50 to 200 hectares of cultivable land, depending upon the section of the country in which their lands were located. The compensation for expropriated land was fixed in lei at the pre-War valuation. The payments were extended over a long term of years and the peasant can now pay for 1 acre of land worth £15 or more with the value of a pig.

The former large landowners who still have 50 to 200 hectares of land are the only purchasers of farm tractors, as the peasant holdings are too small to warrant the purchase of a tractor. Landowners are now beginning to adjust themselves to changed conditions, much more interest is being manifested in scientific farming, and many more tractors are being sold. Dealers state that their sales for 1926 will double those of 1025 and that they are unable to supply the demand. The number of farms large enough to support one or two tractors is still sufficient to make Roumania an important tractor market.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended October 31 amounted to £E12,406.

A military aeroplane crashed on November 19 at the Mostar aerodrome, Yugoslavia. Lieutenant Glokovitch, the pilot, was killed, and the mechanic was seriously injured.

The numbers are announced of 44 Seven per Cent. First Mortgage Bonds of the Bengal Telephone Corporation which have been drawn for redemption, and will be paid off at par at the office of the P. and O. Banking Corporation, 122, Leadenhall Street, E.C.3, on December 31.

Owing to heavy rain, 14 miles of railway between Basra and Baghdad are reported last week to have become impassable, and a train which left Basra found itself isolated a few miles beyond Shaibah. The mail service is disorganized, and the mail from Baghdad due on November 16 did not reach Basra till November 20.

While a number of Christian refugees were motoring from Mardin to Mosul last week their car stuck in an attempt to ford a mountain stream. The water rose with incredible rapidity, sweeping away everything in its path. The motor-car and five bodies were subsequently found in the river bed lower down.

The Earl of Birkenhead announced in the House of Lords on November 18 that the Secretary of State for India in Council, in agreement with the Government of India, was prepared to accept as a whole the recommendations of the Royal Commission on Indian Currency and Finance, subject to such further consideration of details as might prove necessary.

A recent labour census of the Jews in Palestine shows that 31,821 persons have registered as workers—about a fifth of the total Jewish population. The 1922 census showed 16,232 labourers. There are 23,447 in the principal cities and twons, representing an increase of 100 per cent. over 1922, when the corresponding figure was 12,202. Jewish labour in the agricultural settlements also shows an increase of 100 per cent.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked H.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

BULGARIA.

Creosote.—The Minister of Railways, Posts and Telegraphs invites tenders for the supply of 1,000 tons of creosote for impregnating railway sleepers. December 10. (D.O.T.)

EGYPT.

Drugs.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of drugs required for the period of one year commencing April 1, 1927. January 15.

Cotton Yarns, Etc.—The Controller of Technical Education Sharia El Kasr el Aini, Cairo, invites tenders for the supply of cotton yarns, olive oil, carbonate de soude and Nabolsi soap, for the Rug Factory at Assiut. December 30.

Mild Steel Regulating Gates.—The Egyptian Ministry of Public Works invites tenders for the supply of 112 mild steel regulating gates required for the Assiut Barrage, in accordance with drawing C.T.A. No. 3480. December 1. (D.O.T.)

A.C. Motors.—The Ministry of Education invites tenders for the supply and delivery of five A.C. motors and switchboard for Assiut Model Workships. December 16. (D.O.T.)

Reservoir.—The Minister of the Interior Municipalities and Local Commission Sections, Savoy House, Cairo, invites tenders for the supply and erection on site at the town of Minia El Khamh of a steel reservoir having a capacity of 200 cubic metres on a steel framework tower. The contract includes the necessary piping and fittings as well as the water level indicator. Alternative prices are also required for a reservoir of 300 cubic metre capacity as well as for the foundation in re-inforced concrete instead of concrete. December 9. (D.O.T.)

Electric Motors.—The Ministry of the Interior invites tenders for electric motors and accessories. December 5. (D.O.T.)

Bridges.—Tenders are invited for the supply, construction and delivery to the Ministry of Public Works of seven opening and six fixed bridges together with supplies of protective fender piling, etc. December 1. (D.O.T.)

Centrifugal Pumps and Filters.—Tenders are invited by the Ministry of the Interior for the supply and erection of four centrifugal pumps, mechanical filters, electric motors and accessories for the waterworks at the town of Sembellawein. December 1. (D.O.T.)

The second forecast of the Indian cotton crop gives the total area under the crop as 22,143,000 acres, which compares with 22,840,000 acres at the corresponding period last year.

The Ionian Bank announces a final dividend of 3s. per share, with a bonus of 2s. per share, both free of tax, making 8 per cent. for the year ended August 31 last.

The new preference shares which were offered to shareholders in the Cyprus Asbestos Company at 25s. per share were subscribed more than eight times.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

An Albanian Insurrection.

Reports of a rising in Albania have been circulated with fair regularity every few months since Ahmed Bey Zogu's successful revolution two years ago, but they have hitherto proved to be false. They were based, no doubt, on knowledge of what was under contemplation, but erred in a failure to appreciate the fact that even in Albania a desire for peace and order has been slowly gaining ground in recent years. On the present occasion the report of an armed challenge to the Albanian Government has proved to be correct. The revolt broke out in the north and has centred mainly round Skutari. The position remains obscure owing to the suspect sources from which all the reports have hitherto been received and to the apparent unwillingness of the Tirana Government to mention the subject until it can announce that the insurrection has been suppressed. If statements from Belgrade can be trusted this time, the revolt of four tribes has been prompted from outside the country, and it was hoped to bring about a simultaneous rising in southern Albania. This latter part of the scheme, if actually planned, would seem to have miscarried. The Albanian Government has, so far, had to deal only with the north, and the insurgents have been unable to stand up against the field artillery brought to bear upon them. If the Government succeeds in quelling the revolt, it will be in some measure due to the loyalty of a section of the Catholic Mirdites, which has stood by it at the critical moment. In any case an additional burden will have been placed on the Albanian Treasury, and must render the attempt to balance the Budget more difficult than ever.

Albania and the League.

It is noticeable that some reports implicate in the rising Mgr. Fan Noli, who was himself driven from Albania by Ahmed Bey Zogu two years ago. According to Albanian standards there may be nothing either wrong or unusual in this militant prelate's attempt to turn the tables on his successful rival, and Ahmed Bey will naturally have a certain diffidence in lodging a complaint against action which he himself did not hesitate to take in similar circumstances. On the other hand it is not creditable to the new spirit in international affairs which the League of Nations is supposed to embody that members of the League should lend themselves, directly or indirectly, to the promotion of unrest in a country. The argument applies equally whether Mgr. Fan Noli or Ahmed Bey Zogu is in power in Albania. The League is not called upon to interfere in the domestic affairs of any of its members; but, if it is not to be content with purely negative results, it should contrive to impose respect among its own members for the decencies of international relations. There is no need to accuse the Italian Government, as has been done in some quarters, of subsidising the present insurrection in Albania; but the fact remains that Mgr. Fan Noli, who two or three months ago allowed it to be understood that he was going to America, is a political refugee on Italian soil and does not conceal his design to work from that safe point of vantage for the overthrow of the present Albanian Government. The revolution that has been taking place in Albania could hardly have been brought about without the expenditure of considerable funds, and unless the former head of the Tirana Government succeeded in removing the State funds when he fled, his war chest will have had to be replenished from resources that are not his own. A few months ago the Italian Minister in Tirana committed the indiscretion of informing the Albanian Government that Italy was dissatisfied with the rate of progress which the Italianisation of its country was making. This diplomatic crudity was explained away at the time; but when Ministers make mistakes of this kind, it cannot be regarded as altogether improbable that lesser Italian lights may be willing to

Digitized by Google

risk a little in the hope of enabling Mgr. Fan Noli to expedite the process of Italianisation. If Signor Mussolini were anxious to clear Italy's reputation in this matter, nothing would be simpler than to insist that political refugees from a neighbouring country must move on unless they are prepared to give a guarantee that they will not openly abuse the hospitality accorded them by hatching plots against friendly Governments. Until steps of this nature are taken, it is evident that there will be a constant recrudescence of unrest in Albania, with a continual strain on Italo-Yugoslav relations.

Greece's Political Difficulties.

Three weeks have not sufficed for the formation of a Government in Greece after the General Election held on November 7. If certain political leaders have time to think of such a matter, they must be inclined to regret the self-assurance with which they called upon General Kondylis, the Prime Minister, to cut himself adrift from politics and to leave the administration entirely in their hands. So long as the Greek people had no direct voice in public affairs, a few leaders felt very confident that they could speak for the nation. The elections have served to dispel this confidence, and the country has reason to be glad that a non-political Prime Minister has retained his hold on the reins of government while the political leaders are trying to fall into line behind the lead given them by their followers. It is part of the irony of the general situation that the elections merely endorsed what the ex-Director, General Pangalos, now on his trial, tried to inculcate into the politicians, that the country was tired of their political squabbles, that it merely wanted good government and that it was quite indifferent as to which party or parties provided that good government. Unfortunately for himself, General Pangalos could not get farther along the road of fulfilling the national aspiration than the suppression of the politicians. When he attempted a constructive policy, his administrative acts were often ill-advised and his methods gave his enemies an advantage of which they were not slow to avail themselves. In order to make a complete break with the dictatorship, General Kondylis felt obliged to reinstate the political leaders, and a political deadlock has resulted. In the meantime General Pangalos is facing a preliminary investigation. His replies to the charges brought against him betray little of the insanity attributed to him during his period of imprisonment while awaiting trial. To his forceful methods of administration a greater contrast could hardly have been provided than in the régime of government in cold-storage that has now been in vogue for four months.

Turkey and Iraq.

The pessimists who for so long held the field against the British Government's policy in regard to Iraq have been further confounded by the opening of the first chapter in the post-Treaty relations of Turkey and Iraq. The first meeting of the Permanent Frontier Commission appointed under the terms of the "Mosul" Treaty has been held at Zakho, just within the Iraqi frontier, and has been characterised by the utmost good will on the part of the Turkish representatives. A report of the meeting in *The Times*, which bears evidence of being first-hand, states that although there was an ordered agenda, and *procès-verbaux* were formally recorded and signed, the deliberations were marked by an absence of official stiffness and by a frankness which enabled each side to understand the other's point of view. The Commission arranged the methods of communication to be adopted by the local frontier officials, reached an understanding with regard to the extradition of criminals, and decided upon a method for obviating as far as possible any further trouble over Turkish refugees in Iraq, by the removal to the south of those who showed any tendency to cross the frontier in order to commit crimes on the Turkish side. A fruitful source of trouble was also eliminated by a provisional agreement regarding the allocation, to Turkey or to Iraq, of certain places near the frontier which had not figured on the maps used during the Treaty negotiations. A final settlement of their position will be reached when the Delimitation Commission, which is due to meet next April, has completed its labours. Not long after the Zakho meeting the good impression created by the Turkish representatives there has found welcome confirmation in the more cordial attitude of the Turkish Government and the Turkish official or semi-official Press towards Great Britain at the time of the presentation by the new British Ambassador, Sir George Clerk, of his Letters of Credence to the Turkish President at Angora.

Anxious Days in Roumania.

Much sympathy will be felt for the Roumanian people in the severe testing time that seems to lie ahead of them. The ties that bind the dynasty and the nation together are too close to allow any misfortune to overtake the former without reacting powerfully on the latter. The renunciation of his rights of succession by the Crown Prince was, accordingly, as grave a blow to the people as to his immediate family, and fate will bear very hardly on the country, if for any reason the question of the succession has to be raised before all concerned have had time to accustom themselves to the new set of conditions created by Prince Carol's act. King Ferdinand's health, unfortunately, leaves so much to be desired that his medical advisers are inclined to raise the question whether he ought still to be burdened with affairs of State. The Roumanian Constitution authorises the King to nominate a Regency composed of three persons who, after the death of the King, will exercise the royal powers during the minority of his successor. A Regency Council was recently appointed and received the approval of the two Houses of Parliament, but a desire has been expressed in certain political circles to see Queen Marie included in the Council. It is partly for this reason that so much activity is being displayed at the present time in Roumanian political circles. The curious will note that, in spite of the large majority which the present Government has in Parliament, it is M. Bratianu, the ex-Prime Minister, who seems to be taking the lead in negotiations intended to devise the best method of meeting a complicated situation. Electoral methods in Roumania are designed not so much to test the wishes of the electorate as to secure a majority for the Government appointed to conduct them. If, immediately afterwards, an occasion arises to gauge the real views of the people no machinery exists for the purpose, and political leaders have to bargain among themselves, in order to bring about a coalition Government.

DOUBT IN PALESTINE.

To the superficial observer something is very rotten in the state of Palestine at the present moment, and it has not taken long for prejudiced visitors such as Colonel Wedgwood of Mr. Vladimir Jabotinsky to discover this fact. Criticism of the British Government is not a new amusement in the Holy Land, but the fact that such publicity has recently been given to it suggests that, as usual,—for complaints are always loudest when made by minorities—it is the minority which for the time being is the worse off in Palestine. And, indeed, this is so. It may be true that the Arabs were disappointed at the apparent absence of results to the unofficial negotiations which they had a few weeks ago with the authorities, but there is no question that most of the complaints that are now emanating from Palestine derive from one sort or another of Zionist. Nor are these cries based on such thin ground as the alleged incidents at the Wailing Wall, which were discovered on official investigation to be quite unimportant; they concern in fact the very future of the Jews' "National Home" in Palestine. As a sample of the kind of sentiments now being harboured by anxious Zionists, we quote the following from a Jerusalem Zionist paper which is certainly not given to extremism:—"Palestine is heading in a direction that will make the Zionist position wholly untenable. There is little hope in heaven, in the sea, or on earth. The Jewish National Home is a hollow structure; industry is an inflation; trade is in stagnation; politics are confused and complicated to an extent that turns the head dizzy by mere inspection." Now it cannot be denied that considerable support could be adduced to these statements, which, if they were the whole truth, would lead to the supposition that the great Zionist experiment had ignominously and at all points failed. For many months the economic position of Zionists in the Holy Land has been lamentable, and, apparently, irremediable from the application of any internal measures. Naturally the distress has been greatest at the industrial centre of Tel Aviv, but the trouble has not been limited to the inhabitants of this new town. Unemployment has been rife; and it is a significant omen that the Jerusalem Government has had to advance to the Tel Aviv Municipality the sum of £30,000. (An omen, however, significant in both good and bad senses). Largely, of course, the plight of the Zionists arises from the financial situation in Poland, whence immigrants, who, in last March, for instance, reached four figures, have lately dwindled to less than five hundred. Indeed, as our Jerusalem Correspondent recently remarked, emigration of Jews from Palestine is now exceeding immigration. In the opinion of all the experts, however, this state of affairs is only temporary and with the various schemes for harnessing electricity, harbour construction, road-making, and so on, it is certain that the large numbers of unemployed now in Palestine will be re-absorbed. Such an improvement in the general economic situation is probably assured even without the Parliamentary Loan of £4,500,000, which is so soon to be discussed at Westminster.

But those who are disposed to be gloomy about the economic situation are finding further matter for doubt in the political situation. As we have said, the high hopes which were entertained of Arab co-operation with the Government (that these should have in some measure reposed upon a mistranslation of a passage in the *Falastin* shows how eagerly they were gathered) have been for the moment abandoned. It remains to be seen how the Arabs will avail themselves of the opportunities given to them by the Municipal Franchise Ordinance. Of this new measure, upon which, we understand, the High Commissioner sets considerable store, and which is a really notable step in Palestine's local self-government, there has been, as indicated in our Jerusalem Correspondent's last letter, much Zionist criticism. As far as we can make out, however, these criticisms—whether they relate to religion or to the age of voting or to the exclusion of women—arise from the fact that Zionists are people with a Westernised intellect come to an Eastern land. For our part, we think that the Palestine Government has drawn up an exceedingly able Franchise Ordinance, eminently suited to the stage and present circumstances of Palestine. Another matter on which the Zionists are indulging in some criticism relates to the recent appointment of more British officers in Palestine—from which the somewhat hasty conclusion is being drawn that Great Britain is heading straight for a Crown Colony in the Holy Land.

It is from such a background of doubt, if not of fear, that Zionists are turning their attention to another—and we cannot help thinking a rival—scheme for the colonisation of the Jews: we mean the scheme of the Moscow Government for the settlement of Jews in Southern Russia. It is stated that there is abundant enthusiasm, both among certain classes of Jews, and among the official Bolshevists (e.g., Kalinin), for this new scheme. For the most part it is American Jews who are backing this endeavour to establish "Crimeanism," as this alternative to Zionism is being called, but English money has been sent to Russia for the furtherance of the scheme, and is reported to have been collected in pennies in the East End of London. In the United States, apparently, there are many influential Jews who believe that the Moscow Government will give to the Jews what they assert the British Government has withheld from them—free land, concessions, the respecting of guaranteed rights and so on. But it is no mere coincidence, it is rather a direct result, that these criticisms and praises of the Soviet's scheme should have been published at the time of Palestine's temporary embarrassment, and, as we hinted when writing recently on the subject of Mr. Jabotinsky's mischievous propaganda, we believe that they will largely cease with an improvement in the Polish situation and with a closer supervision by Zionists of their activities in the newer colonies. It is impossible not to believe, for instance, than an easing in position of Syria will have a beneficial effect upon her southern neighbour, or that a new buoyancy will be visible in Palestine with the floating of the loan of £4,500,000, or that immigration will increase with the beginning of the great Rutenberg and Haifa schemes next year. In the meantime, however, it is necessary and only fair to extend a certain sympathy to the perplexed Zionists, whose susceptibility to unsound propaganda is naturally greater now than it has been for some time. In the main, the condition of the Zionists in Palestine depends, as Dr. Weizmann, who is now touring in America in support of Zionism in Palestine, very well knows, on outside Zionist support. The limits of British official assistance have been made clear; it is for the Jews themselves to resolve the doubts that now assail them. That they will achieve such a resolution is almost certain. Their great need of the moment is steadiness, for the inclination is rife among them not to see the wood for the trees.

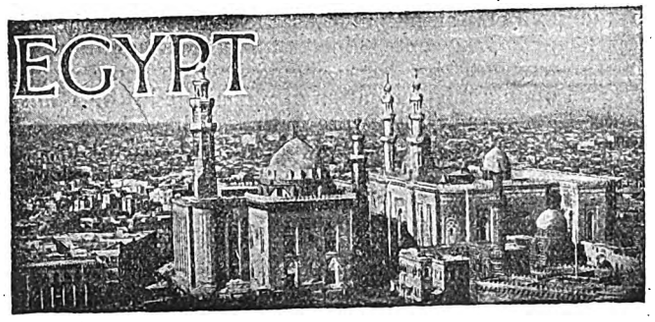
The Near and Middle East

From Our Own Correspondents.



Cairo, November 20.

The New Parliamentary Session.

The inauguration of the new parliamentary session took place this week with customary pomp. The High Commissioner attended, supported by his entire staff, and was accommodated in a special box on the lower tier next to that reserved for the Diplomatic Corps. The Speech from the Throne was short, having been cut down very much at the last moment. It was relatively anodyne and contained no passages of any controversial character. There was, however, a striking passage on the friendly relations existing with the foreign Powers and particularly those with Great Britain, and on the steady development in good understanding and mutual confidence that was taking place. Both this and the reference to the maintenance of the Constitution was received with loud applause.

The tone of the Speech was entirely in keeping with the new current that has been set in motion within the past week. At the ceremony commemorating the anniversay of the first demand for independence Zaghloul Pasha and his chief adherents delivered speeches strikingly moderate and free from most of the provocative allusions to which we have been accustomed in the past: while the Wafd and Liberal Press have been at great pains to emphasise the friendly feeling of Egypt towards Great Britain and the universal desire for an agreement based on the maintenance of the Constitution. This is indeed a welcome change. One can only hope that the parliamentary session, on the threshold of which we now stand, will give evidence in its deliberations and decisions of a like change of heart and be free from the unfortunate features marking its predecessor, which were scarcely calculated to carry conviction of the sincerity of the profession of friendly sentiments towards Great Britain.

University Lectures in English.

A series of lectures in English on Contemporary History was begun this week at the Royal Geographical Society under the auspices of the State University. The lecturer is Professor Sarolea, who is Professor in that subject at Edinburgh University. For his inaugural lecture, which was attended by the High Commissioner and Lady Lloyd, the American and Belgian Ministers and a very large number of British and foreign residents, he chose the subject of the European Revolution. The subsequent lectures will deal with the Parliamentary Régime, the rise and fall of the various empires and the growth of the British Empire and of the American Commonwealth. Professor Sarolea prefaced his lecture with a few words addressed to the students on the subject of discipline. He particularly emphasised that politics cannot be allowed to enter the precincts of a University. These remarks were singularly appropriate in view of recent events in the Egyptian student world and, coming from such a source, they should be taken to heart by those to whom they were addressed, so that we may have no repetition of the incidents, unworthy of the dignity of students in a State University, that have occurred during the past fortnight.

Ziwar Pasha.

Ziwar Pasha has returned to Egypt from his European trip, and resumed his seat as Senator at the opening of Parliament on Thursday. He was looking vastly improved in health and thoroughly satisfied with his well-earned holiday. He told me that he had come straight back from Nice overland, travelling via Trieste, Constantinople, Konia, Adana, Aleppo, Beyrouth and Haifa. The journey had taken just over thirteen days, but this was because he had stopped off for personal reasons at various places *en route*. Had he come straight through he would have been in Cairo in just unded seven days from leaving Nice, which is only a little longer than the sea journey via Marseilles. Ziwar Pasha added that the overland route, in spite of changes in connexions, was by no means difficult and was quite comfortable.

The English School.

The English School at Cairo, which, as its rapidly growing numbers show, is more and more becoming the central institution for the education of British children in Egypt of all classes, has found it necessary to open a boarding side in two separate sections, for boys and girls, at Helouan-les-bains. Ever since the War, during which the school had a successful boarding section crowded owing to the interruption of sea-travel, inquiries have never ceased to be made from Cyprus, Syria, Khartoum and Aden whether boarding pupils could be accepted; it is, however, only this year that the financial situation of the school has enabled its Council, in response to these demands, to face the initial expenses and risks of re-opening the boarding side. The children live in two admirably adapted houses at Helouan, the health resort of Egypt, and travel in daily by train under escort to attend their classes in Cairo. It is much to be hoped that the enterprise of the Council will meet the appreciation that it merits, so that the usefulness of the school may extend beyond the confines of Egypt to British Communities in all neighbouring countries.

IRAQ.

Baghdad, November 16.

The Cabinet Crisis.

Jaafar Pasha al Askari, Iraq's Diplomatic Agent in London, who has been recalled from his post to form a new Cabinet, is making the journey by air from Trieste, and is expected in Baghdad on November 17. In the meantime the Progressive Party has been consolidated by a declaration of loyalty on the part of the Kurdish deputies, whose action in voting against the Prime Minister's nominee for the post of President is held to have caused the defeat of the Government. The Kurdish deputies, having privately assured Sir Abdul Muhsin that their preference for Rashid Ali Beg al Gilani was purely a personal one, with no political motive of any sort behind it, attended a meeting of the Progressive Party, at which they disclaimed all responsibility for the defeat of Hikmat Beg, but at the same time swore undeviating loyalty to the party.

Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey Palestine, Iraq, and Persia.

Trial of Elliott's Murderer.

The trial of Najim Fahad as Saadun, the tribesman who was accused of the murder of Sir Alan Cobham's mechanic, Mr. A. B. Elliott, has ended in a verdict of manslaughter. Najim was sentenced at Nasiriyah by the Sessions Court to five years' rigorous imprisonment.

Bad Weather.

Unusually heavy rains have fallen in the Baghdad district during the last ten days. So continuous has been the downpour that the rainfall has already exceeded half the total fall of last year. On the Baghdad-Basrah railway a number of breaches were made by the heavy rain, one of them 200 feet long and 9 feet deep; it was necessary to bring up trains to the other side of the breach and transfer mails and passengers. The northern railway line has also suffered, several breaches being reported in the neighbourhood of Shaiba, and minor ones near Qaraghan and Khaniqin.

New Street, Baghdad's main thoroughfare, was as usual flooded—the city fire brigade was called out to pump the muddy water into the Tigris!—and most of the other streets are almost impassable to foot passengers. It is hoped that before next year's rains the condition of the streets may be improved. The Municipal Engineer has now in hand two separate experiments in paving New Street, one stretch being laid on a foundation of macadam, and one on reinforced concrete. Careful consideration has been given to the question of drainage, lateral conduits being provided at intervals to carry off the water to the river.

Mud in the Desert.

Though last week's Overland Mail from Beyrouth was successful in getting through the heavy mud, the outgoing convoy was delayed, as the desert road from Baghdad to Ramadi is a particularly bad stretch. Overland letters for Europe were transferred to the Air Mail, which was reported to have reached Cairo in time to catch the mail steamer. This week's incoming mail convoy, which reached Baghdad up to time, reports worse mud than ever before experienced in the desert. A number of local cars were stranded for some days in a mud swamp about 60 miles beyond Ramadi: wet through with the persistent heavy rain, shivering with cold, and at the end of their food supplies, the wretched passengers were more than thankful to see two aeroplanes of the Royal Air Force, which had been sent out to drop them dates and other food. The cars eventually reached Baghdad, having taken eleven days over the desert crossing instead of the usual two. Four char-a-bancs are still stranded with their loads of some 30 passengers each—men, women, and children—and it is still raining.

Armistice Day.

All arrangements for the celebration of Armistice Day in Baghdad had to be cancelled owing to the weather. The two-minutes' silence was observed by the Royal Air Force and in Government Offices.

Sofia, November 18.

Elections to the General Councils.

On November 14 the elections, of which I wrote in my last letter, took place. Their results were not unexpected, but, in view of the circumstances in which they were held and of the importance attributed to them by the Government—it indulged in propaganda many days before the actual day of polling—they have considerable significance. In effect the Government obtained 46 per cent. of the total votes cast, but of the actual seats, it obtained from 55 to 60 per cent. This is a majority which cannot be despised.

But these numbers have not only numerical significance. It will be at once seen that, from the political point of view, they constitute a setback for the Government, which hoped for a far greater majority, and this setback is all the greater because the whole governmental machinery, including Ministers, Deputies, their strongest supporters and the provincial committees of the Democratic Entente, had been working with the single aim of winning the elections, even with the help of oppression. Moreover, these figures imply an appreciable stiffening in the organisation of the Opposition, which, taken separately in its three principal parties—Democrats, Agrarians, and Liberals, defeated the Government in numerous communes, even where the Democratic Entente believed itself to be thorough master of the situation. This stiffening is due in considerable measure to the wave of opposition which is rising in the country, and also to the uniting—still only partial—of the three parties: a movement which, if it develops into consolidation, will transform itself into a formidable *bloc* in the legislative elections next spring. In short, from the point of view of the next electons, these figures of November 14 undoubtedly show that the great popular vote in the spring will be even more unfavourable to the Government, which sees itself menaced by a certain, if not immediate, danger. The main question agitating the electoral body itself is: who will preside over these spring elections?

Rival Political Conceptions.

For this, there are two competitors: the Democratic Entente, which has the advantage of being in power (a great factor in all Balkan elections!), and the Democratic Party, with its eventual allies. In these two bodies two fundamentally different political conceptions reside—the strong hand of the administration of the Democratic Entente, and the path of reconciliation preached by the

Democratic Party, whose respected chief, M. Malinoff, seeks to realise, by a big coalition, the pacification of the country.

Democrats and the Democratic Entente.

These November elections lead one to the conclusion that the Democratic Entente, which aimed at being at the head of affairs during several Legislatures, will not be able alone to present itself at the next election without exposing itself to certain defeat. It will, therefore, have to seek the alliance of at least one other party, which can only be the Democrat Party of M. Malinoff. Such a coalition would give it the double advantage of strengthening its position (at the cost of a partition of power) and of dividing its opponents, by means of the prevention of a Democrat-Agrarian-Liberal *bloc*. The Democrats, moreover, would consent in no case to treat with the Government Party without being assured of the triumph of their conception of national reconciliation. But it is precisely this policy which frightens the most active elements of the Democratic Entente, for it comprises the abolition of the "quarantine" imposed since the *coup d'état* on the Agrarians, who, representing only a compact mass of opinion without recognised chiefs, need to be reorganised under a régime of complete liberty, and who—at least their wiser heads—for this reason would approve of and even encourage a combination of Democrats with the Democratic Entente. In fear of such a development, some Government followers are urging a more active policy, in particular demanding the replacement of M. Liaptcheff by a more energetic (that is, a less scrupulous) personality.

It looks, therefore, as if a crisis in the Government Party would precede any other political developments.

November 24.

Athollovo, the First Refugee Village.

Nearly two years ago the Marquis and Marchioness of Atholl offered the Bulgarian Government to construct, at the expense of the Save the Children Fund, of which the Marquis is President, a new village in Bulgaria to house a certain number of refugees. This offer was gratefully accepted and construction began in August 1925, on ground furnished by the Bulgarian Government, who also provided the necessary timber and transport of materials. The Save the Children Fund at first placed at the disposal of the Government, in co-operation with the Society of Friends, a sum of £5,000 (3 million leva) for the construction of 50 Houses and 50 stables. But to this sum was subsequently added another three million leva, including a donation of £2,000 by Mr. Noel Buxton, and it was found possible to increase the buildings to 90 houses and 90 stables. The village bears the name of Athollovo, and is situated on land reclaimed from the old Stralja marsh in the Bourgas Dept, near the towns of Sliven and Yambol. Inhabitants are taken half from refugees from Thrace and half from those from Macedonia, each family having at least four children. The families have been selected with due consideration to their physical well being and intellectual attainments, and were required to have agricultural experience. A plot of land of 50 decares (12½ acres) is given to each head of a family. The land and houses belong to the inhabitants of Athollovo, who will be required to repay the State a minimum sum of 4,000 leva (£7) per family, but will not be allowed to dispose of their property. The Save the Children Fund has also given the agricultural implements necessary for the cultivation of land.

The formal inauguration of the village took place last Sunday (November 21), when the religious service was conducted by Mgr. Illarion, Bishop of Sliven, in the presence of King Boris, M. Liaptcheff, Prime Minister, Mr. Stephenson, British Chargé d'Affaires, and Messrs. E. W. Golden, Secretary-General, and Webster, Bulgarian representative of the Save the Children Fund, to whose indefatigable efforts are due both the rapid construction of the village and the successful start already given to the inhabitants in the cultivation of the land. M. Charron, representative of the League of Nations, was also present.

The formal act of handing over the village to the Bulgarian authorities was performed by Mr. Golden, who expressed the thanks of the Fund for the enlightened help given by the Government in the creation of the village. King Boris paid a striking tribute to the Save the Children Fund, and pointed out that the satisfactory solution of the refugee problem would considerably assist in assuring the required progress of the economic and social life of the country. Athollovo was the first village and the first attempt to regulate the difficult question of refugee settlement by the combined efforts and resources of the State and philanthropy. "We are," continued King Boris, "profoundly touched and flattered by this very evident proof of the sympathy which the British Society has for us, as well as for the support and cordial co-operation which has been given in regard to the refugee question by the League of Nations." In conclusion the King expressed his warm thanks to the Marquis and Marchioness of Atholl, to Mr. Noel Buxton and to the Save the Children Fund.

At the luncheon which followed the ceremony M. Liaptcheff drank to the health of King George. Subsequently two refugees, one from Thrace and one from Macedonia, followed by their wives and children, came forward to express their gratitude to the King and to the representatives of the Save the Children Fund.

A bust of Aristotle Valaoritis of Leukas, the Greek poet, has been unveiled in Athens.

The death occurred in Bombay on November 16 of Sir Lallubhai Asharam Shah, Puisne Judge of the High Court of Bombay.

H.M.S. Clematis, Commander C. H. Godwin, D.S.O., which left Port Sudan recently for Jidda, is ordered to arrive at Malta by December 15 for docking, and will thus spend Christmas at the Mediterranean Fleet base. The Cornflower, which arrived at Suez on November 13 from Rabigh, was to be relieved at Port Said on December 1 by the Dahlia, which Commander C. C. B. Vacher has taken out from England. Commander E. T. Wickham, O.B.E., will transfer from the Cornflower to the Dahlia, and the former ship will return to Chatham under Commander Vacher for survey.

The following appointments are announced by the War Office:—

Lieut.-General Sir E. P. Strickland, K.C.B., K.B.E., C.M.G., D.S.O., to be General Officer Commanding the British Troops in Egypt, in succession to General Sir R. C. B. Haking, G.B.E., K.C.B., K.C.M.G. (June 1, 1927.)

Lieut.-General Sir C. D. Shute, K.C.B., K.C.M.G., from Lieutenant of the Tower of London, to be General Officer Commanding-in-Chief, Northern Command, in succession to Lieut.-General Sir C. H. Harington, G.B.E., K.C.B., D.S.O., appointed General Officer Commanding-in-Chief, Western Command in India.

Major-General Sir G. F. Boyd, K.C.B., C.M.G., D.S.O., D.C.M., to be Military Secretary to the Secretary of State for War, in succession to Lieut.-General Sir D. G. M. Campbell, K.C.B., appointed General Officer Commanding-in-Chief, Aldershot Command. (March 1, 1927).

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

NEWS FROM TURKEY.

The following paragraphs are extracted from various issues, up to November 21, of the Constantinople *Milliet*:—

Alcohol in Constantinople.

Under the heading "A Senseless Protest," the *Milliet* describes the objection raised by the Constantinople Directorate of the Public Debt to the farming out of the revenues on alcoholic liquors by the Government. A tenth part of this revenue was, under an old law, handed over to the Public Debt Commission. The *Milliet* considers that as the Government has engaged to liquidate the debt, it has a perfect right to devote whatever sums its wishes from whatever sources to this object.

Russo-Turkish Relations.

In a leading article "After the Visit," dated Angora, November 15, Agha Oghlu Ahmed says that everyone will be struck by the harmonious note of Tchitcherin and Rushdi's conversation at Odessa. He proceeds to state that with the will of both statesmen to safeguard the interests of their own and not to endanger international interests, to lay the foundations of mutual friendship, the relations of Turkey and Russia have reached a most important stage in the establishment of world peace. There was nothing in their utterances calculated to disturb international accord. In spite of what scaremongers said there was not a single word mentioned about the East against the West, nor of the two countries against any other country. Tchitcherin and Tewfik Rushdi Bey limited their conversations to subjects in which both countries are interested. Both statesmen were at the same time animated by a sincere desire for the continuance of peace, and Turko-Russian friendship tends to secure this.- Are not both nations equally interested in the maintenance of world peace? Russia, like Turkey, has brought about a far-reaching revolution. Though each country accomplished its revolution by different methods and with other aims, yet they are united as regards their wish for peace, and both wish to be able to reap the fruits of their labours. Neither country has, in fact, the time even to think about foreign adventures. Thus each nation has these matters in common—to arrange all matters of mutual concern, to reduce all and every kind of misunderstanding between themselves, and at the same time to promote the cause of universal peace.

The East has always been the excuse for war. Under the old order, Turko-Russian relations were a constant source of trouble, but under the new it will be the duty of each to cultivate better relations, and to ask itself how it can best serve the cause of peace. And the two nations intend to follow this line of policy, because by doing so they are satisfied that they can best serve the cause of peace. Just as, in the past, the enmity of Turkey and Russia was a disturbing factor in the world, their friendship will in the future ensure general peace.

The Frontier Commission at Zakho.

The Boundary Commission between Turkey and Iraq has begun its work. It comprises:—The Vali of Hakkiari, Bekr Lutfi Bey; Iraq Delegate and Vali of Mosul, Naji Shaukat Bey; Mosul District Inspector, Mr. Jardine; Turkish Military Delegates, Col. Ali Riza and Major Ahmed; Dep. Gov. Amadia, Hamid Bey; Clerk, Mustapha Bey; Mosul Commercial Delegate, Salim Namie Bey; Interpreter, Salim Bey.

The Turkish delegation arrived on October 18 at Zakho, and were received by the British and Iraq delegates with special ceremony; they will be the guests of the Iraq Government. Everything is proceeding in the most cordial manner, each side doing its best to avoid offence.

General News.

At least 75 per cent. of the houses in Constantinople seem to be in pawn. (Note.—There are no private establishments of this nature, and the Government does the business.)

A party of seven officers of the Afghan Army is at present in Turkey, attached to the Turkish Army for a course of instruction and to learn Turkish. The *Milliet* remarks that this visit will still further strengthen the bonds of comradeship between the two countries.

The new Afghan Minister to Russia said in an interview that Russia, by the treaties she had concluded with Eastern nations, had shown her policy in its true light. This policy was a sympathetic one towards Eastern nations struggling to be free. The commercial treaty between Afghanistan and Russia would further strengthen the existing friendly relations.

Mustapha Kemal Pasha received Sir Henry Dobbs, British High Commissioner in Iraq, on November 23 at his residence at Chamkayia, near Angora.

The Turkish National Assembly has voted unanimously for the prolongation for one year of martial law in Turksh Eastern provinces.

Lord Irwin, the Viceroy, met 60 of the Ruling Princes and Chiefs of India on November 22, when the annual session of the Chamber of Princes opened at Delhi.

The Government of Palestine has issued an official statement to the effect that the reports of alleged persistent Arab attempts to annoy Jewish worshippers at the Wailing Wall in Jerusalem prove on investigation to refer to one or two incidents of the most trivial character.

The units serving in Colonial stations at the cost of the Home Government are being gradually reduced where it is possible to dispense with them, and in this connexion the Indian battalions which have served in Pacific stations are being returned to India. Some of them are being disbanded, and the 4th Battalion 2nd Bombay Pioneers is being dispersed at Agra under this provision. Many of the men will be transferred to other battalions.

A new time-table of the Simplon-Orient express will shortly come into force, reducing the journey (which at present takes 75 hours) between Paris and Athens by two hours 50 minutes. A second-class wagon-lit will for the first time be put on to this express. The railway service between Salonika and Constantinople will also be accelerated and reduced to 25 hours. The representatives of the Anatolian Railways are stated to have expressed the hope that the Simplon-Orient express may be continued beyond Constantinople to Palestine.

PERSONAL AND GENERAL

TO-DAY

December 2, 1926 (New Style).
November 19, 1926 (Old Style).
Jomada I. 26, 1345 A.H., of the Muslim Calendar.
Kislev 26, 5687 of the Jewish Calendar.

Lady Ratan Tata has left London for India.

Julia, Countess of Dartrey, leaves London to-day for India.

Sir Charles McLeod has arrived at the Grand Pump Room Hotel, Bath.

Sir Shafto and Lady Adair have sailed for India, and will be away for several months.

Sir Ian Malcolm left London in November 30 for Cairo, and will be away for about a month.

The Aga Khan left the Ritz Hotel on November 27 for Paris after a short stay in London.

Lady Cohen was "at home" on November 30 at 8, Cadogan Mansions, when Sir John Stavridi spoke on "Greece in Reconstruction." Sir Willoughby Dickinson presided.

Sir Percy Loraine, who succeeds Sir Milne Cheetham as British Minister in Athens, is expected to arrive in Greece on December 11 from Persia.

By permission of the Greek Minister, a show of paintings by modern Greek artists was held recently, simultaneously with a collection of Greek refugee carpets, at the Greek Legation, 51, Upper Brook Street.

Sir Hugh and Lady Poynter, who recently arrived in London from Canada, are leaving this week for Sydney, New South Wales, where they expect to reside for the next three years.

Sir John Maffey, Governor-General of the Sudan, left Victoria by the boat train on November 25. Members of his family, a number of friends, and representatives of the Foreign Office and the Colonial Office were present to see him off.

M. Venizelos and the Greek Minister in London were present last Friday evening at a reception given at 5, Queen's Gate Gardens for the members of the Anglo-Hellenic League. Professor Marshall, the Koraes Professor, gave an account of some incidents in the Greek War of Independence, 1827.

CONSULAR APPOINTMENTS.

The following Consular appointments are announced in the *London Gazette*:—

Mr. Edwyn Cecil Hole, Consul for the State of Damascus and the Independent State of the Jabal Druse.

Mr. Leonard Henry Hurst, Consul for all the coast line of Egypt east of Damietta Light and the Governorates of the Suez Canal and of Suez, the maritime portion of the Mudiria of Keneh, and the Sinai Peninsula.

Mr. Clarence Edward Stanhope Palmer, Consul at Bengazi.

Mr. Douglas William Keane, Consul for the Prefectures of Corfu, Yanina, Prevesa, and Arta.

Mr. Gilbert Mackereth, Vice-Consul for the city and administrative district of Fez as far west as the eastern limit of the sub-district of Wazzan, the city and administrtative district of Meknes and the part of Eastern Morocco which extends from the Franco-Spanish zonal frontier to Taffilet, including the towns and administrative districts of Taza and Ujda.

Sir Alan and Lady Cobham arrived in New York on November 24.

Mr. F. S. Danks has been appointed Assistant Conservator of Forests, Cyprus.

Sir Flinders Petrie arrived last week at Gaza, in Palestine, where he intends to start excavations.

Sir Milne Cheetham, late British Minister to Greece, left Athens on November 26, on his transfer to Copenhagen.

Field-Marshal Lord Plumer, High Commissioner for Palestine, opened the new Government school for boys at Haifa on November 27.

The President of the Swiss Confederation has appointed Professor Fritz Bäschlin, Professor of Geodesy and Topography at the Federal Polytechnic School at Zürich, as President of the Mixed Commission for the delimitation of the boundary between Iraq and Turkey.

Mr. S. S. Davies, Treasurer of Palestine, has been gazetted Currency Officer in connexion with the introduction of the new currency based on the pound sterling which is to supersede the pound Egyptian in Palestine. The new pound, like its predecessor, is to be divided into 1,000 mils.

On November 26, for the first time since October, 1925, Greece opened Parliament. The opening meeting was purely formal. General Kondylis read the Presidential message. The House then adjourned till December 6.

M. Moloff, Bulgarian Minister of Finance, who is at present in London, has been instructed to represent Bulgaria at the next session of the Council of the League of Nations. The Director of the Refugee Settlement Services, M. Sarafoff, will also attend.

Papers respecting the work of the Permanent Mandates Commission of the League of Nations, presented to Parliament by Sir Austen Chamberlain, have been issued as a White Paper (Cmd. 2767), price 4d.

TALK ABOUT INDIA.

"ASIA IN THE TWENTIETH CENTURY." By Sir Frederick Whyte, K.C.I. (Scribner's, 7s. 6d.)

We know that Sir Frederick Whyte, on completing his very successful term of office as President of the Indian Imperial Legislative Council, was asked by the Government of India to compile for them a text-book on federal government in various parts of the world, in order to help them in their investigations into the next step to be taken in giving India the kind of government likely to be useful to her. We presume that he visited the United States for the purpose of his studies and that the University of Virginia took advantage of the distinguished stranger's being in their midst by asking him to lecture to their students on matters on which he was known to be an authority. It is, perhaps a pity that he did not resist their request, for he must have found it difficult to prepare lectures, likely to do himself justice, in the circumstances in which he was placed. And it certainly is to be regretted that he permitted himself to travel beyond the problems of India which must have been uppermost in his thoughts. As it is, he no doubt gave his audience much pleasure, but he must have greatly regretted the apparent necessity of having his lectures produced in book form, for the book cannot in any way add to its author's already deservedly great reputation.

The fact is that everything worth reading in the book is about India, while the matter about Asia generally is of the sketchy nature which we know so well from the performances of too many second-class journalists. That he includes Egypt as part of Asia illustrates this. Whatever may be argued on its spiritual Continent (and on this subject there would be much diversity of opinion), there can be no doubt that Egypt is part of Africa, and Sir Frederick gives no reason whatever for ignoring the facts of geography.

All this, really extraneous and unprofitable, matter about Asia leaves him with far too little space to develop what he has to say about India, and the result is a book which, so to speak, falls between two stools. As Sir Frederick will no doubt be a popular speaker and writer on Indian politics between the present time and 1929, we may, however note that this little book prepares us to be cautious in listening to his opinions. Unless he here does himself a grave injustice, it appears that his views on India are founded solely on five years' close contact with the Central Government of India and on personal acquaintance with a large circle of Indian politicians. He appears to have no first-hand knowledge of India outside Simla and Delhi, nor of the Indian who keeps out of politics and yet represents infinitely the larger and more important part of our charge in his country. A writer or speaker with this limited equipment must necessarily see things out of their proper perspective. It would be doing an injustice to the author not to admit that, here and there, he seems himself to be more or less conscious of this defect.

C.S-W.

THE MEROVINGIAN AGE.

"ROMAN SOCIETY IN GAUL IN THE MEROVINGIAN AGE." By Sir Samuel Dill. (London: Macmillan and Co. 21s.)

This end crowns thirty years' work. In the last volume of his trilogy Sir Samuel Dill continues to make old things new, and to enable his reader to invest with Merovingian colour even the present. Sir Samuel Dill is—we cannot bring ourselves to say was—among the historians with a literary training, and wide interests, and a fresh mind. Even his almost crass Belfast prejudices, are, like the more Victorian asides of Hodgkin, proof of his absorbed interest in his subject-matter. He can compare the Germans of Tacitus with the Mohicans of Fenimore Cooper, appreciates the greatness of Clovis, has an extenuating word for Chilperich, lauds on one occasion Jordanes the historian, and treats Gregory of Tours as an artist of a high order in the arrangement of his materials. He notes a fundamental similarity in Merovingian and Victorian country life. He has more than Charles Kingsley's appreciation of the poetry of the lives of saints, and something of Ruskin's understanding of the finer elements in the Frank. From codes of law he extracts the relevant, and shows the value of the autocracy of the Frank Kingship. He does not merely repeat the old generalisations, nor does he omit a tale at full length. His discrete agnosticism towards generalisations on defective materials, or in estimates of individual characters, hardly detracts from the colour of his portraits. Where his interpretation carries least conviction, mostly both implicitly, and sometimes even explicitly, he provides his own corrective. For an historical student to shut this last book of a great trilogy is to pass out of a gallery of intimate portraits, knowing one must spend an hour in a stuffy museum.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

THE DEVELOPMENT OF CYPRUS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Under the heading "The Development of Cyprus" your correspondent, Mr. C. S. Hourmouzios, makes the following statement: "the fruits of the Island are of the most select and delicious nature." I am sorrowfully compelled to deny this. Mr. Hourmouzios should study the report of the Imperial Economic Committee, of which Sir Sydney Henn and Mr. Sandeman Allen are members. Quality, they say, pays first, last and all the time. The British market is too often made the dumping ground of stuff that should never have left the premises of the growers.

It should be patent to all concerned that until the quality of Cyprus fruit is enormously improved, there is no opening in the Island for British factories.—I am, etc., G. L. H.

Kyrenia, Cyprus, November 13.

"AN ARMY IN IRAQ."

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Your correspondent "An Easterner" does not seem to be fully acquainted with the actual situation in Iraq, and the best proof of that is his suggestion that "one thousand strong mounted troopers" suffice to keep the peace in that country.

With Turkey armed to the teeth, Persia trying to follow suit by the recent introduction of conscription and with the present Soviet anti-British activities and propaganda throughout the East, he thinks that Iraq can be secure from molestation by a mere hedge of treaties, which greater nations have been forced to disrespect in times of necessity.

By the introduction of conscription, Iraq is honouring her promise to Great Britain of assuming as much as possible of the responsibility for her internal and external defence. Moreover, by that measure, she is trying to substitute an efficient and high-spirited army for the present costly mercenaries.

Contrary to your correspondent's opinion, I think that conscription is of great material and moral value to that country; for beside its military advantages for Iraq and Great Britain, it is the best means of teaching the tribesmen discipline and order and of strengthening the sense of nationality among the whole inhabitants of that country.

If the Iraqis were not keen on the Turkish Army life, it was not because of their despising that profession so much as because of the dread of a life of deprivation and hunger which that service would entail upon them by being sent to the snowy Caucasian Mountains barefooted and ill-clothed, or to Central Arabia with insufficient supplies of food and water.

Lastly, if the exaggerated opposition of the Iraqis exists at present, it will surely disappear in a very short time when they see the difference between the old system and the new and when they realise that their sons are no longer sent to distant countries to defend a foreign nation.—I am, etc., A. R. CHALABI.

Downing College, Cambridge, November 26.

[As was implied in "Notes of the Week" in our last issue, Iraq, with a population under three million, cannot hope to dispose of an armed force numerically equal to the armies of its neighbours. On the other hand, the need for maintaining order within its own borders and for being in a position to strike a blow in its own defence may well prompt Iraq to favour conscription as the more suitable method of obtaining the limited number and the better type of recruits required.—ED.]

NEWS IN BRIEF.

An Italo-Greek Commercial Treaty was signed in Rome on November 26.

As the result of a fire two hundred shops are reported to have been destroyed at Broussa.

The Swarajists have captured all the six seats allotted to the city of Calcutta in the Bengal Council election.

The Suez Canal Company has decided to erect a memorial near Ismailia to those who fell while defending the Canal during the War.

The Indian deputation to the round table conference on the Indian question which is to open in Cape Town on December 20 sailed for South Africa on November 24.

The President of the Hellenic Republic has conferred the first class of the Order of the Redeemer on Sir Rabindranath Tagore, who arrived in Athens on November 25, where he was entertained at luncheon by the Athenian Literary Society.

The Maharaja of Patiala has been re-elected Chancellor of the Indian Chamber of Princes. The Standing Committee of the Chamber for next year will consist of the Maharajas of Patiala, Bikanir, Alwar, Dholpur, and Kashmir, the Nawab of Bhopal, and the Chief of Sangli.

Lieutenant-Colonel F. C. Prideaux, C.S.I., C.I.E., British Consul-General at Bushire in the Persian Gulf, will retire this month. Lieutenant-Colonel L. B. H. Haworth, who has been Consul-General in north-eastern Persia since March, 1924, is to succeed him.

The 1st Battalion, East Surrey Regiment, has been moved from Hongkong to India, and the 6th Pack Battery, Royal Artillery, the 8th Pack Battery, Royal Artillery, the 10th Pack Battery, Royal Artillery, and the 2nd Brigade, Royal Horse Artillery, have been moved from India to Egypt.

A company of the Rifle Brigade was returning to its cantonments at Peshawar on the night of November 19 after night exercises when it came into contact with a gang which was apparently engaged in looting a mill near by. A party of villagers had turned out to oppose the gang. A brief fight ensued, in the course of which Sergt.-Major Wheeler was hit and later died of wounds.

The Polish-Roumanian Treaty of Reciprocal Guarantee was ratified in Warsaw on November 25 by the Polish Senate, the Roumanian Government having agreed to reconsider its decision not to compensate Polish nationals who lost estates in Bessarabia through the working of the Roumanian Land Reform Acts. The Seym has already ratified the treaty.

The *Daily Telegraph* states that the new British naval mission which is to proceed to Greece for the purpose of assisting in the instruction of the personnel of the Greek Navy, will include an officer of high rank to act as adviser to the chief of the Greek Naval Staff; another officer who will lecture on naval strategy and tactics at the Naval War Academy, for specialists in gunnery, torpedo work, signalling, and submarines respectively; and three seaplane pilots, of whom one will devote particular attention to the training of naval air mechanics.

THE PERSIA SOCIETY.

President : Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

Further particulars may be obtained of E. H. Keeling, Hon. Sec.

74, Grosvenor Street, W.1.

SIR JOHN MAFFEY.

India was particularly well represented at the Luncheon given at the Edward VII. Rooms, Hotel Victoria, on November 23 by the Royal Colonial Institute in honour of Sir John Maffey, K.C.V.O., Governor-General of the Sudan. After referring to the presence of Lord Chelmsford, Lord Meston, and Sir Michael O'Dwyer, Sir John Maffey, in replying to the toast of his health, felt obliged to break off the epitome of an Asian "Who's Who," in order to come back to the subject of the Sudan. Lord Stanley of Alderley, Chairman of Council of the Royal Colonial Institute, who presided, had naturally stressed Sir John Maffey's record of service in India as offering the best augury for a similar success in his new post. The Institute, he pointed out, so far departed from the strict letter of its title as to be interested in all forms of government identified with the British Empire, and for this reason had no difficulty in bringing within its sphere the Sudan, whose Governor-General was appointed by the King of Egypt on the recommendation of King George. Sir John Maffey, he added, had shown in India the qualities that would stand him in good stead in the Sudan, and he invited the gathering to drink to the health of "Young Cincinnatus recalled to the plough."

Sir John Maffey, in his reply, stated that he found that he had been credited with various qualifications for his new post. There were two that he could recognise—the first, that he was taller than some people, and the second, a sense of humour; for he imagined that no one would ever admit to being without a sense of humour. After expressing his thanks to those under whom or with whom he had served in India for their good wishes as shown by their presence there, Sir John Maffey stated that, although he had not yet been out to the Sudan, he felt quite able to commend it in all the phraseology of the poster and advertisement as an "ideal winter resort." Those who stayed in London during the winter might lose their health; if they stayed in Paris, they might lose their reputation; and if they stayed at Monte Carlo, they would lose their money. It was a question only of going a little farther to the Sudan, in order to find all that could be desired. After a reference to the work of the Sudan Plantations Syndicate under the chairmanship of Mr. Eckstein, Sir John Maffey said that a new chapter of the romance of the Sudan was about to open, a chapter of development and reconstruction. It would reveal a sympathetic endeavour to maintain what was best in native institutions and to promote native growth. In the field of education the work was being carried on with discretion. Reading, writing, and arithmetic were not forced upon the people, and greater attention was devoted to vocational training. The vast irrigation schemes were being directed in such a manner that neither exploitation nor expropriation occurred. The owner remained and received a generously apportioned share of the profits. By that means they would raise the standard of life. The British Treasury had guaranteed 18 millions upon loan to the Sudan for this work, and the manner in which the money had been forthcoming indicated that the City of London had not lost its enterprise in parts where British industries could be encouraged. In going out to the Sudan he knew that he was about to take part in a very heavy programme, but he recognised what was well known, that this country was nowhere better served.

Among those present at the Luncheon were: Viscount and Viscountess Chelmsford, Lord Meston, Lady Sydenham, Lord Lamington, General Sir Reginald Wingate, Sir Michael and Lady O'Dwyer, Sir Godfrey Lagden, Sir Montague Barlow, Sir Hamar and Lady Greenwood, Sir W. D. Michell Cotts, Sir Selwyn and Lady Fremantle, Sir Robert Perks, Sir Charles Greenway, Lt.-Colonel Sir Arnold Wilson, Sir Henry Strakosch, Sir John Shuckburgh, Sir Reginald Mant, Sir George Truscott, Lt.-Colonel Sir Henry Galway, Sir Benjamin Robertson, Lt.-Colonel Sir Pieter and Lady Stewart-Bam, Lady MacMahon, Mr. R. Eccles Snowden, Colonel the Hon. Milo and Mrs. Talbot, Mr. and Mrs. Robert H. Wood, Capt. and Mrs. J. Bell White, Mr. and Mrs. A. S. Bull, Mr. and Mrs. Montague Bell, Mr. and Mrs. A. G. Manning, Mr. and Mrs. Leo Weinthal, and Messrs. S. S. Bagge, G. M. Boughey, Vaughan, Cornish, M. H. Ellis, F. A. Hook, L. E. B. Homan, A. H. Ramsden-Tagore, and Bernard Sotham.

THE PROBLEM OF SYRIA.

The Near and Middle East Association met on November 26, at 55 Harrington Gardens, S.W. (by kind permission of Mrs. Bruce Dick) to discuss the question of Syria. Sir John Foster Fraser, who presided, pointed out that the present troubles of France in Syria were of patent interest to another mandatory Power, Great Britain. Major E. W. Polson-Newman then described at some length the historical background of the present situation. He showed how in the 'sixties of last century the French had intervened in Syria, and how the memories of that intervention had not been forgotten by Muslim and Druse. During the War the British pledges given to the Arabs and to the French were to some extent contradictory, and the French, although supporting the Arabs' rising against the Turks, never favoured the large ideas of Arab independence and unity which were thought to be entertained by Britain. Proof of this came when the régime of Faisal was installed in Syria. General Gouraud was compelled to take under French control the four towns of Damascus, Homs, Hama, and Aleppo, which had been allotted to the Arabs. From this time onward the French governance of Syria was military, and the evils of such a régime, displayed at a minimum by the sagacious General Weygand (whose continuance in office might have frustrated the rising in Syria), were heightened and crudely displayed by General Sarrail, whose discourteous and untraditional treatment of those Druses who came to him to complain of the conduct of the autocratic Capitaine Carbillet, led directly to the Druse revolt in the summer of 1925. After General Sarrail was recalled the French tried a politico-administrative system under M. de Jouvenel. This politician offered wide concessions, but they were not accepted. The latest High Commissioner in Syria, M. Ponsot, was to try a purely administrative system.

During his lecture, Major Polson-Newman asserted that the present position in Syria was better than it had been at any time since the revolt, and that the longer the revolt went on the better France's position would become. The reports in this country, emanating largely from the Syro-Palestinian Committee in Cairo and the Palestine Executive in Jerusalem, were for the most part utterly false; figures were distorted beyond recognition. There had been much talk of France's relinquishing the costly mandate for Syria—it had been suggested that Italy, who desired a jumping off ground for Anatolia, as an outlet to her agriculturists, might be entrusted with it—but he thought France would remain in Syria. France's present troubles had arisen mainly from her constant change of High Commissioners and consequently of policies, her unwarranted treatment of the Muslim opposition as "pan-Islamic" (in fact there was no connexion between the Druse revolt and the Syrian rising), but most of all to the fact that she had tied the currency of the Syrians, an essentially merchant people, to the fluctuating French franc. Even now he believed that if the French would change the currency in Syria (and M. de Jouvenel had assured him that this would be done) the situation would quickly improve.

Captain Gordon-Canning, who did not claim the personal knowledge of Syria possessed by Major Polson-Newman, stated that he was in constant touch with the situation in that country. He was concerned first of all to defend the Syro-Palestinian Committee in Cairo from the charge of misrepresentation. That Committee, he said, had been recognised by the Permanent Mandates Commission as representing Syria, and its *penchant* for exaggerated figures was to be matched, say, in the field reports of the Allies during the War. Next he turned

Digitized by Google

to the relations of Syria with the League of Nations. Here he thought that, as in the Rif, England had a great moral responsibility. He quoted French authors to show (1) that it was recognised that France had not worked the mandatory system aright (M. Paul Boncour) and (2) that some Frenchmen still thought of Syria in purely financial terms. Next he turned to the refugees in Syria. Consequent upon the bombardment of Damascus and of the firing of several villages, thousands of Muslims were homeless and needed assistance. In conclusion, Captain Gordon-Canning suggested a basis for Franco-Syrian *rapprochement*, and also the formation of a vast State, containing Syria, Palestine, Transjordan, and Iraq, under the aegis of King Faisal.

In the subsequent discussion, a Syrian supported the last suggestion, asserting that none of these Arab States could stand alone.

Sirdar Akbal Ali Shah repudiated the charge that the way to an Oriental's obedience was through his pocket: had not Gibbon pointed out that it was not Islam that could boast of its millionaires? He also drew attention to the importance of the recent Arab suggestion in Syria that the country should become a monarchy.

A Manchester Syrian pleaded for the cause of the homeless and incapacitated Muslim refugees. This, he said, was a question quite outside politics, whether imperialistic or idealistic. Through the good offices of the Near and Middle East Association, £211 had already been collected.

Maulvie Malik, of the Southfields Mosque, disclaiming interest in politics, asked whether a certain responsibility did not lie at the door of England, to whom the people in the countries which she had conquered from the Turks had confided their destinies.

Mr. Justice Martineau, of the Lahore High Court, died in Lahore on November 23.

Sir Lawless Hepper retired from the post of Director of Development, Bombay, on November 30.

Professor John Garstang will retire this month from the post of Director of Antiquities in Palestine.

The Supreme Court of Inquiry in Greece has decided on the preventive imprisonment of the Pangalist Minister of Agriculture, M. Stamoulis, who is accused of receiving bribes.

Mr. Manmatha Nath Mukharji has been appointed a Judge of the High Court of Judicature at Calcutta in the place of Sir Nalini Ranjan Chatarji, Kt., who has resigned.

Sir George Clerk, Ambassador to Turkey in succession to Sir Ronald Lindsay, presented his Letters of Credence to Mustapha Kemal Pasha, the Turkish President, at his residence near Angora on November 23, in the presence of Tewfik Rushdi Bey, Minister for Foreign Affairs, and members of the British Embassy staff.

Mr. H. P. M. Rae, who died in London recently, was for many years in India in the service of the Bombay Company, Ltd. For several years he was a director of the Bank of Madras (now the Imperial Bank of India), and for three years he was President of the Bank. He was senior steward of the Madras Turf Club and President of the Madras Club.

Mr. J. E. F. Campbell, O.B.E., has been appointed District Commissioner of the Southern District of Palestime, which no longer includes Jerusalem as it did when Sir Ronald Storrs held the post. Jerusalem and Ramallah have been formed into a separate administrative unit under Major E. Keith-Roach as Deputy District Commissioner. His place at Haifa as Assistant District is being taken by Mr. G. MacLaren, O.B.E., until now District Officer at Nablus.

THE WEEK AT HOME.

London, Tuesday Morning.

The New Constitutionalists.

Among those superficial observers who love large generalisations and omnibus labels, it has long been common talk that there are in this country only two classes: Constitutionalists and Socialists. It must, therefore, have been particularly puzzling to them to see, last week, the Liberals and the Labour Party adopting the rôle of Constitutionalists, and the Conservatives displaying a disregard of traditional usage.

The debate was upon the seventh ratification of the Emergency Regulations. The Home Secretary, the chief adviser on these things, stated that he had been "advised" by the chief constables of the country to keep the Regulation in force until more miners had returned to work. This was hardly good enough for the party politicians opposed to him. They promptly asked whether the food, lighting, clothing, transport, and so on of the community were in danger, and whether it was not true that the Emergency Regulations were intended solely to deal with a national crisis. If the essentials of life were not threatened, the Home Secretary had not, they claimed, the faintest constitutional right to proclaim the Regulations. The precedent thus created was most dangerous.

Of course these arguments were "all in the game." But even from an outsider's point of view it is not difficult to see that the time may come when another Government, of a different political colour from the present one, may proclaim a state of siege. The monstrosity of such proclamation depends so much upon the point of view. But at any rate this incident should do something to damp down the very foolish claim of "constitutionalism." Of course there is a certain type of mind which would like to have the Emergency Regulations as a permanent part of the Constitution, but such a mind, as things are at present, is rather apt to run along unconstitutional lines.

The Mines.

Virtually the coal stoppage is over; the dispute is petering out with the triumph of the owners' terms—district settlements, longer hours, reduced wages, varying period agreements, and all elimination of the Miners' Federation from wages negotiations. Now is coming the nation's reckoning. This is being partly done for us in the cheerful assumption of the Mines Department that the number of unemployed miners, after all the pits have been re-

Calcutta, Delhi, Simla, Lahore, Rawal Pindi and Murree.

Digitized by Google

opened, will be anything from one to three hundred thousand. The official statement contains the natural but very disconcerting news that their reabsorption in the industry depends upon their adaptibility to other trades; which, of course, are most of them over-stocked with labour already.

Inevitably one thinks of the report of the Royal Commission, by which, had it been adopted, the Government would have been obliged to take measures for the "assistance of any labour that may be displaced, or for facilitating its transfer, and should provide such funds as might be required for such purpose." Alas, that Report is dead. This nightmare of the owners, and the dream, growing more lovely but ever more remote, of the miners, is as insubstantial as air. The miners, one must think, are now wishing that they had accepted it when it was first fluttered before them.

November.

After the beauties of October we have endured, with a vengeance, the trials of November. Every day this month it seems to have been raining; and last week the fogs came down still further to obscure our darkened souls. Nor was it the jolly kind of fog, but the damp and black fog that gets everywhere and leads nowhere. Final wisdom was to be found in Tom Hood's lines:—

No sun—no moon!
No morn—no noon—
No dawn—no dusk—no proper time of day.
. . . . . .
No warmth, no cheerfulness, no healthful ease,
No comfortable feel in any member—
No shade, no shine, no butterflies, no bees,
No fruits, no flowers, no leaves, no birds—
November!

To think that that was written in progressive England nearly a hundred years ago!

The English Child.

There are some interesting conclusions upon the future of Englishmen in the report which the Stationery Office issued last week upon "The Health of the School Child," written by the Chief Officer of the Board of Education, Sir George Newman. He states definitely that the general physical condition of the children has improved, although there has been little reduction in the total burden of disease being subjected to treatment. Since 1907, for instance, the London and county children have increased in weight and height; the child who leaves school at fourteen is, it is stated, physically better in every way than the child of twenty years ago. Part of this improvement is without doubt due to the vigorous fostering by the Board of Education of organised games and sports.

The City Churches.

Last week in Parliament was a memorable one for the City of London, for the City Churches Measure, introduced by Lord Hugh Cecil, was decisively defeated in the Commons. It is impossible to analyse the motives of those who voted against; they were a mixture of religious, æsthetic, and "constitutional" grounds. That these churches, which admittedly are more than the Sunday needs of the City demand, should have been built, not out of ecclesiastical funds, but with the City's money, after the Great Fire, should now be handed to the Church as a whole was a prospect which dismayed politicians of all parties. Nor is there any evidence that public opinion was behind the suggestion of Lord Hugh Cecil and his eminent friends.

The large question of churches without congregations remains, however, to be settled. There must be some kind of protection for churches which possess virtues not predominantly ecclesiastical. But for the time being the really conservative men have won. To some extent it is a negative victory, but all the same it is refreshing in these days of progress and vandalism.

A Smaller Cricket Ball.

Alterations in the rules and practices of Cricket are not lightly made in this conservative land so that, despite the plethora of suggested changes both in the laws of the game and in its customs, the Advisory Council recently could be prevailed upon to decide only in favour of a smaller ball. Personally, I think the Council extremely wise, both in their particular recommendation and in their refusal to entertain other changes. Last year was notorious for the number of bad, unwieldy balls which bowlers had over after disheartening over to send down to increasingly smiling batsmen. With a smaller ball, bowlers will without doubt return to their rightful own: which is midway between success and failure.

Racial Decay.

Whatever be the ultimate verdict of History upon the age in which we live, there at least is no question of the fact that we possess prophets who keep foretelling us of our future destiny. Generally the upbraiders of our present tendencies are theologians; occasionally they are scientists. And when the two are combined, the resultant anticipations are horrific.

Dean Inge, for example, in the Lloyd Roberts lecture which he has just delivered, states dogmatically that natural selection has ceased to operate in highly-civilised States. He suggests that, with the modern type of mankind which, instead of walking and writing, travels in motor cars and uses typewriters, Nature may have exhausted his ingenuity. The danger, according to him, is that human beings may become parasitic on the machine which they have made for their own use. The situation to-day, he continues, is serious because the average number of children of the people contained in "Who's Who" is two. The problems of the present age are rather medical than political.

This is all very ingenious, and, like most of the Dean's saying, contains much acute and accurate observation. But all the time one wonders why he is so ineradicably hostile to those thinkers who would order society in a different manner, who would, for instance, base their scheme of change on the right of the human being to free himself from the machine. It is perhaps one of the most curious phenomena of our time, this Dean's passion for Protestantism (which, speaking generally, stands for industrialism), and his hostility to the age of mechanism. The trouble with the Dean is, in short, that his diagnosis is so often right, and his prescription so often wrong.

ALTER EGO.

The Yugoslav elections for the "Oblastne Skupshtine," or county councils, have been fixed by the Government to take place on January 23.

Sir Rabindranath Tagore last week arrived in Alexandria from Athens, and is giving lectures both in Cairo and Alexandria.

General Kalevras, Governor-General of Greek Macedonia, on November 15, opened the new University of Salonika, of which Professor Sotiriades is the Rector.

Brigadier-General A. J. McNeill has been appointed manager of the Palestine Stud Farm, under the Palestinian Department of Agriculture and Forests. Buildings are now being erected by the Public Works Department on a site three miles north of Acre at a cost of £E9,000. It should be ready in January, 1927.

An Army Order states that from April 1, 1927, the areas which will qualify for double service towards pension by a European soldier whilst in the Sudan Defence Force will be the Provinces of Bahr-el-Ghazel, Mongalla; Nuba Mountains, Upper Nile, Fung; the district of Gallabat in Kassala Province and Darfur which lie south of latitude 12deg, including the districts of Nyala and Geneina.

AROUND THE FOUNTAIN.

BY "SELIM."

The crowd which, earlier in the day, had dutifully assembled to rend the air with loyal shouts for President Mustapha Kemal Pasha and loyal curses for the foul Smyrna conspirators had long since melted away. Now through the mild June night pleasure seekers came drifting across Bayazed Square to lose themselves in contemplation before the central fountain with its white shafts of water and curtains of airy spray. Formal flower beds and a foot-high railing separates the basin from the cobbles. This railing is used as a reserved seat or dress circle for the first comers. On the evening of which I write nearly a hundred dark figures of both sexes were solemnly roosting along it, like so many crows. Of gossip and laughter such as one would expect in a casual evening crowd there was almost none. These folk had gathered as to a concert, to listen piously to the music of water and to contemplate its beauty in the restful coolness of evening. The most perfect Wagnerite engaged in his devotions could scarcely have improved on the correctness of their attitude.

This Oriental passion for running water is one in which most Occidentals share very modestly, if at all. To the Westerner, flowing water is merely water in motion. But for the arescent East running water is beauty and music and life in one. So in the Old Seraglio it was the voice of gushing water which helped to protect the consultations of state against the quick ear of the eavesdropper. And in much humbler circumstances one has known Oriental servants reduced to homesick tears by the sound of rainwater emptying into a cistern. For to them it was the music of a cold spring in their mountain village, burned out and abandoned these ten years and more.

Behind the dress circle stood a crowd of a hundred or so. Many of them were gravely employed in observing the fountain, but here decorum was less strict. Friends greeted each other heartily and visited about. All the quaint races between Hindustan and Smyrna were probably represented in that crowd. The black skull caps of the Persians were there in numbers, for Persians, even more than Arabs, are devotees of fountains. One saw the long, concave features of a Georgian, and heard the thick speech of Lazistan. But Europe's ever-victorious pants and caps have largely subdued all those slight differences of dress which formerly proclaimed the wearer's country and even his village.

A professional old gentleman in a long, tattered skin coat sidled up.

"My son, all I ask is bread," he croaked. "I'm in hospital, you know."

"How much have you earned to-night from this crowd, my father?"

"Not a para—yet," he rejoined hopefully.

A second afterwards he was looking gloomily at the solitary piastre that had dropped into his palm.

"A fiver would not have been refused," he sighed in mild reproof of the younger generation's indifference towards its opportunities.

Under the plane trees near-by shepherds were loudly crying their sheep for sale. Some of the animals were washed white and touched with magenta and henna dye and had brightly gilded horns. For this was the night before "Little Bairam," and in the morning all devout Muslim families would kill a sacrifice in commemoration of Abraham's offering up of Ishmael, as their tradition has it. All the long day the shepherds had been bellowing "Mashallah, my father! Butter bags, solid fat, butter bags! Come along you, only fifteen 'papers'" (pounds). Wherever this empty shouting gave way to sounds as if mortal enemies were at last exterminating each other, hopeful porters gathered to wait for the bargaining to succeed. Then in no time one would throw the purchased animal and tie together its front and hind foot on either side. Slipping an arm behind each pair of feet, he would hoist the animal on to his back and trudge off behind the purchaser, sweltering beneath this living jacket equipped complete with fleas and all accessories. The bewildered beasts would ride off wearing an expression rather more anguished than that of the smug shouldered lambs habitual in Christian art.

But at this hour of the night customers were scarce and the shepherds' throats cracking. The animals, too, were starving, and every few minutes several of them would try to bolt this way or that, only to be headed off and cudgelled back into the flock. It was the fag end of a hard day. A shifty-looking city youth was proffering his services as guide to rich pastures for the night.

"How far?" asked the suspicious countryman.

The question was taken as a reflection on his honour by the upright young man. "Vallahi, it's not more than a minute or two," he lied boldly. "And if I am lying pay me nothing," he added earnestly. In a few minutes the tired flock went bleating off under the lamps and disappeared into the dangerous cross-currents of the evening trams and Fords.

Four boisterous young ladies came shouldering, hand-in-hand, through the crowd. Their drab clothes were thrown anyhow about their stocky bodies; their heads were loosely covered with draggled kerchiefs of the sort which their more fortunate sisters wear as a badge of virginity. None of them could yet be within sight of twenty, but four rougher members of their difficult profession would be far to seek. The male interest in the fountain suddenly chilled, while honest wives and daughters looked askance and sniffed. The depraved four moved ahead, paying little attention to frequent jostlings and talking loudly to cover the barrage of loose remarks aimed at them by many of the gentlemen present.

They had beaten that covert unsuccessfully and were trudging off to try their luck round one of the cafés when one of two youths who had been assiduously supporting a lamp-post seized his companion's hand and started off in pursuit. The tall youth resisted energetically for a little but was soon running shamefacedly along with his fat companion—two more Bairam rams for the slaughter. They overtook the girls, ogled them from the side and then got in their way. But the seasoned veterans had hopes of more profitable custom and wheeled sharply about. The gangling youth appeared immensely relieved and his stout friend had again to resort to force before the adventure could be continued. Meanwhile, a number of other young bloods had plucked up courage to join in the chase. But the girls had surrounded a young lieutenant whom they caught admiring the collars of the lamps which ornamented the towering minarets of Bayazed Mosque. He chaffed them a while and then escaped. The followers crowded up hopefully, but the smallest girl of all snapped her fingers magnificently under the nose of the burliest of that gross train. Before her sharp ribaldries they retreated to the middle of the roadway where they stood undecided. The baggages moved away, but not too far to see what might happen.

Suddenly there came a startling flash and explosion as the battery on the adjoining terrace fired the first shot of the twenty-one gun salute in honour of Bairam. Other guns answered from the naval units in the Golden Horn, from Pera and from the Asiatic shores of the Bosphorus. Frightened crows leaped out of the tree-tops and wheeled about, croaking dismally in the darkness. From a dozen gleaming minarets the muezzins sent forth their shrill challenge, "There is no God but Allah." And in that moment of flame and battle-thunder, of darkness and ecstatic cries one seemed to see athwart the quivering sky the fiercely swirling skirts of the old warlike Semitic deity. "Jehovah, terrible in battle," Allah, the Distresser, the Avenger.

The Municipal Corporation of Calcutta have rejected by 20 votes to 12 a motion proposing that an Address of Welcome should be presented to the Viceroy when he arrives there on December 10.

THE INDIAN MERCANTILE MARINE.

The question of the establishment of an Indian Mercantile Marine formed the chief matter of the speech of the Chairman at the annual meeting of the shareholders of the Scindia Steam Navigation Company, held at Bombay on October 30. The direction of the Company is entirely Indian, though the Indianisation of its sea-going officers, which is of course one of its declared objects, has not yet proceeded far. The burden of the Chairman's speech was an indictment of the Government of India for its failure to do anything practical towards the establishment of an Indian Mercantile Marine, in particular in the matter of the reservation of the coasting trade to Indian shipping concerns: and the refutation, point by point, of arguments, put forward by the Government spokesman in the Legislative Assembly last March, by which he attempted to justify the attitude of the Government in the matter. The speech is welcomed by the leading Anglo-vernacular newspaper of Bombay as a departure from the usual practice of Indian directors in "delivering humdrum speeches." The paper observes that Chairmen of Boards of Directors in Britain "follow the wholesome practice of devoting the major portion of their annual addresses to the shareholders to the discussion of some burning questions of national policy: and such pronouncements by eminent British financiers and industrialists exert considerable influence on the policy of the British Government by the lead that they give to public opinion." The paper goes on to assert the existence of a "national demand for the reservation of the coast-wise trade to Indian ships" and of a hostile attitude on the part of the Government of India to this demand: and deduces that a national Indian Mercantile Marine will come into being only when a truly national Government takes the place of the present Government.

There is, of course, considerable force in these arguments; though the use of the word "eminent" makes a suggestion that will not, perhaps, be entirely lost upon the readers of the article. It is probably true that a national Indian Mercantile Marine will have to wait for a national Indian Government, under which the question of efficiency will not be of so much moment as it is to-day; but the extent of "the national demand for the reservation of the coast-wise trade to Indian ships" may be gauged by the figures given by the Chairman when discussing the question of Indianisation. He said that, out of the 63 "deck officers" and engineers at present employed by the Company, 29 are Indians—three deck officers and 26 engineers: and explained that Indian boys of the right class will not come forward to be trained as deck officers because they do not know whether they will find any employment after having received the necessary training. The reasons for this he held to be first the dilatoriness of the Government in instituting a training ship in Indian waters, and secondly its refusal to agree to the reservation of the coast-wise trade to Indian shipping. It was explained that no demand had been put forward for immediate reservation; what was desired was that it should be definitely announced that complete reservation should take place in twenty-five years: and that, as soon as trained men began to pass out from the training ship, existing lines engaged in the coast-wise trade should be required to take at least half of their new officer recruits from among them. Such an announcement would, the Chairman thought, lead to the early investment of more Indian capital in shipping. The implied suggestion, in this opinion, that Indian competition with lines under European management was not likely to be successful unless the scales are weighted in favour of the former, was met by two arguments. First that it was only right that Government should abandon its attitude of "studied defence of the monopolistic vested interests of foreign-shipping," which appeared to claim "a sacred, inviolable and eternal right to continue to run on the coast even against the economical and national needs of the country": for which one may perhaps read the economic needs of the shareholders in Indian shipping ventures. Secondly, that other countries had made the same reservation: those instanced being Turkey, Chile, France, Australia, Japan and the United States—none of which, with the possible exception of Australia, seem to have any bearing on the point at issue, especially when it is considered that all of them have a "national" Mercantile Marine in being, and not only a visionary one of the future.

The actual objections put forward by the Government spokesman in the Assembly were quite easily answered; so that it seems unnecessary for the Chairman to have characterised them as "misleading and deliberately mischievous," as showing that the Government attitude had changed from one of continuous apathy into direct hostility" to the cause of Indian shipping, and as leading to "difficulty in sustaining faith in the honest intentions of the Government." The Government case seems to have been that the policy of reservation introduces the principles of expropriation and of flag discrimination: will enhance the rates of coast-wise freight: will lead to the laying up of a large proportion of coast-wise shipping during the slack season: and, even if desirable for other countries, who have to reserve their coasting trade in order to strengthen their machinery for national defence, is not required in the case of India who have no such need, since the defence of India's shores is in the hands of the British Navy. All these arguments, except the last, are valid against the reservation of coast-wise traffic in any maritime country: and it is a reasonable reply to make, in the case of the last, that the recent decision to create an Indian Navy demands the creation of an Indian Mercantile Marine also, to act as a reserve and as a second line of defence. The valid argument against reservation is a much more simple one—the practical non-existence of an Indian Mercantile Marine, and the ap-

Digitized by Google

parent impossibility of creating one without a scheme of special preference which would go far to defeat its real object—the "economical and national" interests of the country. The Chairman professed to see, in the attitude of the Government, only another attempt to prove the inability of Indians to stand on their own feet: a deliberate intention to make the scheme a failure in order that it might be "flung back in our face with the remark that Indians lack the sense of the sea." After all, there is quite an easy escape from this also: let Indians bend their energies to the creation of an Indian Mercantile Marine that will be able to enter into successful competition with the lines already carrying on the coast-wise trade—a result for which they have many points in their hands, in particular much cheaper overhead charges. When once they have proved their ability to do this, the rest will follow of itself; and they will be able effectively to "fling back in the face" of their traducers the insult which they profess to anticipate.

CURRENT TOPICS.

The Agricultural Commission.

It is difficult at this distance to form an accurate appreciation of the work being done by the Agricultural Commission, but so much at least is clear that Lord Linlithgow and his colleagues have lost no time in coming to grips with the Indian peasant and his numerous foes. We cannot blame the Press if the reports published from day to day are something less than adequate. The Commission's questionnaire, which has just been distributed in this country, shows the enormous area of the ground to be covered, the proceedings consist of experts talking to experts on written evidence which is not read out, and it would take a super-expert to present the result in a form which would tell the whole truth. Naturally the reports fall short of this ideal. We get the occasional telling phrase, or the casual breeze when opinions happen to clash, but we have to imagine most of the solid work that is being done, the sifting of partial diagnoses, the scrutiny of suggested remedies, the comparison of experience gained in different places, in a word the preparation of the complex mother-liquor from which definite recommendations will ultimately crystallise. It is, however, possible to affirm that, even in these early days, the members of the Commission are being enabled to realise something of the seamy side of Indian agriculture, the side which usually receives very little attention from politicians or the Press.

The Peasant and his Water.

To take one illustration, they have had at least a glimpse of the anomalous position in regard to irrigation. The Agricultural Department is suposed to look after the peasants' needs, the peasant often needs water most of all, the State provides it by an elaborate system of canals managed by expert engineers, but, officially, engineer and agriculturist are not on speaking terms. The Director of Agriculture can, of course, apply to the Minister, who, if he agrees, can apply to the Member of Council, who, if he agrees, can instruct the Chief Engineer, and possibly something may happen in the course of a year or two, provided there is good will on all sides. That is thoroughly bad organisation, explicable on historical grounds, because the engineers were first in the field, but indefensible in administrative theory, and exceedingly harmful in practice. We see a Bombay engineer has told the Commission, that in the absence of close co-ordination, there is a mutual lack of appreciation of the problems and limitations of each side; and necessarily it is the peasant who suffers from that state of affairs. He starts growing a new cotton or a new sugar cane recommended by the Department, and then finds it needs more water than the engineers are at the moment prepared to give; and, being a sensible man, he comprehensively blames the Government, without troubling himself to apportion the culpability between the organisations concerned. There are other cases of the same kind, though of less practical importance, for the demon of "departmentalism" is particularly active in India, and it has already become apparent that the Commission will have to find a spell to drive him out of the peasant's way.

The Trader and the Peasant.

"Departmentalism" is, however, quite a little demon compared with some of those which Lord Linlithgow and his colleagues have to face. Already they have caught sight of one of the big ones, possibly the biggest of all, in the shape of the local trader, the man who buys the peasants' produce and supplies the peasants' needs, who cheats the peasant when he buys and when he sells. He is a versatile person, and also ubiquitous. When a tax is taken off, he keeps it for himself; when a new tax is put on, the commoner case in these days of discriminating protection, he makes the peasant pay two or three times as much as the Treasury receives. He is there all the time, and the peasant cannot do without him; but he is almost the greatest single obstacle in the way of agricultural betterment. We notice that some witnesses have offered the counsel of despair, that the State should replace him in one line of business or another, but that is obviously impracticable on the scale that is required. Others murmur the blessed word co-operation, and pass on, but they forget that in India co-operative trading as distinct from credit is still only an infant, and not a very healthy one, one which could be strangled or smothered quite easily should the trade decide to do so. Whether it can be nursed through the dangerous times of childhood is still uncertain, but the peasant can hardly be expected to wait until it grows up, and in the meantime the problem before the Commission is to find out how things can be made progressively better, how the peasant can be enabled to get something like the market price for his produce, and to get implements and supplies at something like the market price. The problem is not absolutely insoluble, for the special legislation recently imposed on the cotton trade is giving satisfactory results, and also, we believe, operating to teach traders generally that the world has moved a little since the sixteenth century, to which their mentality belongs; but it seems to us to be about the most difficult of all the many difficult questiions which are now coming under review.

HAVE you been along the Nile to Luxor or Assuan? It is a wonderful voyage by one of the Anglo-American Nile Tourist steamers. The American Express are General Agents and can reserve cabins in advance for any of the weekly sailings from Cairo.

Services for Travellers to India

SERVICES that smooth the path and take the trouble out of travel. Your steamship passages booked at no extra cost. A uniformed man to meet you at Bombay or Calcutta. An office nearby to take care of your baggage, issue tickets and arrange tours to any point inland. It pays to summon American Express service to your assistance before you leave Europe.

AMERICAN EXPRESS

6, Haymarket - - - - London, S.W.1

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 11.

The Courts Reopen.

The reopening of the Calcutta High Court is something more than the mere resumption of the hearing of cases; it is the signal for the return to Calcutta of the judges and lawyers of all kinds, and these form no small part of the population of the city. The fact that the Courts are sitting always advertises itself, for not only are the streets around filled with motor cars which use them by the day as a garage, but the whole of that portion of the Maidan opposite the Courts is one mass of office *jhauns*, the boxlike cariages which are the most popular business vehicle in Calcutta; it is quite an ordinary thing to see a couple of hundred of them publicly parked, while the horses graze, the syces sleep with their feet waving in the air, and the sweetmeat vendors sprawl their unloveliness in clouds of flies. Electioneering is interfering with the legal profession at the moment, and for other reasons many of the leaders have not yet returned. The new Chief Justice, Sir George Rankin, made a dignified and thoughtful speech in return for his welcome from the Bar, and incidentally paid a just tribute to the achievements of his predecessor, Sir Lancelot Sanderson. Mr. Justice Duval and an Indian Judge, both of whom have served long terms as acting judges, took their seats on their permanent appointment, but there are still three vacancies and there is much speculation as to who is likely to fill them; at least one is expected to be selected from Home.

Armistice Day.

To-day is Armistice Day, and once again the contrast between the North and South of the city has been particularly marked. The two minutes' silence is completely ignored in the Indian city. It is natural in a sporting community, where so high a proportion served in the War, that the ceremony at our Cenotaph should be an impressive one, and there was also a solemn "official" service at the Cathedral this morning; athough numbers of the general public could not find room, a large proportion of the seats reserved for officials were empty. His Excellency was not present, as he arrived in Calcutta only this morning on his return from Darjeeling. That good and human man, Father Douglas, of the Oxford Mission, who served himself, spoke briefly and vividly, and a fine service was made especially memorable by the perfect calls of the North Stafford's buglers.

Elections and Communalism.

So far as the Indian constituencies are concerned, both sides seem to have exhausted their stock of adjectives and their newspapers have become almost dull. When the various campaigns opened there was some semblance of discussions of principle, but these were soon dropped and the rival candidates spent their time abusing each other: but you cannot go on abusing a man on personal grounds for ever, and after you have raked over all his public utterances and published a good deal of his private correspondence for a month or so, you are liable to come to a standstill for lack of further material, and this is what has happened in Calcutta to-day. A sign of the times is that practically every Hindu candidate is now claiming to be a Swarajist, and the old Swaraj Party led by *Forward* are seeking to drop the term and are calling themselves "Congress Candidates." Another most significant thing is that *Forward* has altogether dropped the "Pact," the agreement between the Hindus and Muslims which brought the latter under the banner of the Congress and provided that a proportion of posts would go to them when the Extremists came into power. *Forward* frankly describes it as dead, although at the opening of the campaign it was being hailed as one of the most living issues of the fight. It is clear that the Extremists realise that a Hindu must stand as a Hindu, and it is a tacit admission of the strength of the underlying communal feeling. The Moderate Press has been getting less and less moderate recently, and its string of daily personalities is now no whit behind those of *Forward* in pertinence and peculiar taste.

"The Hovels of the Jute Mill Workers."

Mr. "Padgett" Johnston will be familiar with the above phrase since his recent Indian tour. We commend his earnest attention to the following election caption, which stands out in blackest print in the centre of the Moderate *Bengali* yesterday:—

"On Whose Land Stand
the worst, the filthiest
the most insanitary dwelling-houses
for labourers in Jute Mills?
Mr. Tulsi Charan Goswami's,
Who buys Rolls-Royce Car with his rents.
Labour and friends of Labour
make sure of the practice,
not mere profession,
of your representative."

Mr. Tulsi Charan Goswami is one of the wealthy leaders of the Swaraj Party, the Swaraj Party who courted and were courted by Messrs. Johnston and Sime, and who profess to be the intimates of the Labour Party in England. It may be repeated that with no exception whatever, the whole of the filthy, insanitary dwelling huts around the Jute Mills which are occupied by the labourers in them are owned and farmed by Indians, the majority of whom are substantial people in their own community, and they are not, and never have been, willing to sell their lands or to do anything to make them sanitary or decent. Although the jute industry has pressed for the grant of compulsory powers to enable them to buy such land and erect sanitary buildings thereon, Government has never been willing to legislate to this end.

The Anglo-Indian Poll.

The polling for the two Anglo-Indian vacancies on the Council has concluded, but the result has not yet been declared. The *Statesman* reported that the community was indifferent to the election, and that the voters showed considerable apathy, especially in the outlying districts; on the other hand, the *Englishman* considered that there were considerable enthusiasm and much excitement. The ordinary individual going about the town saw nothing whatever to indicate that an election was in progress, and his report would be that, so far as outward signs are concerned, the election was treated with indifference. There have always been at least two rival organisations which have claimed the leadership of the Anglo-Indian community, and this election has been almost entirely conducted on the issue of the personal rivalries of members of two of the principal Societies. Neither side has shown much dignity, but the display of the two gentlemen, who rather pathetically call themselves "The Two Macs," has been conspicuous in this connexion. Whichever pair succeeds, it will be a case of voices crying in the wilderness.

Men and Things.

The *Pioneer* comments strongly upon the official indifference displayed last week, when the two French officers arrived after their remarkable flight from Paris in four days. The alleged "official" aerodrome at Dum Dum, some five miles outside Calcutta, has long since become an untidy jungle and had it not been for the presence of a reporter in a motor car the two aviators would have found nobody whatever present on the ground, and would presumably have had to walk to Calcutta, even if they had been able to find the road thereto. The *Statesman* has joined in the strong comments and openly blames the military, and possibly this may induce somebody to take action.

One of the vacancies in the Governor's Council has been filled by the appointment of Mr. A. N. Moberly, C.I.E., I.C.S., to be a member. There are others shortly arising,

Digitized by Google

and rumour has it that many candles are being burnt in the preliminary searches.

Thanks to strong police pickets all over the town, the *Dewali Pujah*, or the Festival of Lights, passed off with, practically speaking, no trouble between the communities. This festival, which is usually marked by the most charming practice of burning little oil lights all over the fronts of houses, is the most picturesque in the calendar, but in Calcutta this year the lighting seems to have been rather less general, although some houses produced bizarre effects with the aid of electricity. Fireworks, particularly bombs, were more in evidence, and there were several accidents and one or two deaths the week preceding.

The Indian Church measure is coming in for a good deal of attention in the correspondence columns of the newspapers. This originated with a split in the local Indian Church, which is exclusively run for Bengalis, where a revised hymn-book which contains Hindu ethical songs has caused a part of the congregation to resign the Church. An obviously inspired letter has pointed out that this matter has nothing to do with the proposed legislation; but this is countered by a lay epistle which repeats the challenge, made when the measure first became a possibility, to submit the question of principle to the decision of the members of the Church in India. No one can imagine the promoters' taking such a risk.

The first tenants of the new office buildings in Delhi have moved in this week, and it is rumoured that in view of the width, and particularly the length, of the corridors, motor 'bus services are to run in them in order to save time.

The Trivial Round.

The second day of the Tollygunge Meeting was favoured with the same perfect weather as the first, and it was a day out for the general public; for not only were there large fields and keen racing, but five favourites got home well backed. There were over twenty starters in one race and the writer, who was at the bend into the straight, blushed for them. Colonel "Andy" Tennent, late of the Scottish, rode three winners.

Not only at Tollygunge, but in the first published entries for the big events in the cold weather, the names of many new, and younger, owners are making a good show: this is very welcome. Orange William runs again in the Classics, and the hold that he has on the public imagination is shown by the prominence that is given in the papers to his coming. It is hoped that, if this beautiful gelding fails to make a show early on, he will be given an honourable retirement; it would be a wicked thing to run so great-hearted a horse in hack events after his achievements.

The M.C.C. are showing their superiority over the up-country teams in no uncertain way, and it is obvious that it will take a particularly good side to stop them now that they have got used to the light and the pace. Meanwhile they are giving some fine exhibitions of the brighter cricket, and Gilligan is proving himself a most sporting captain.

The local cricketers were all at it during the week-end and during the two days' holiday, in addition to the week-end, the match reports were filling a page a day. J. L. Guise has scored his first century this season and Alec. Hosie is laying about him to some purpose: G. Aste from Madras is also making his presence felt in no uncertain way.

Athletics are getting under way and preparations are being made for the Olympic Meeting which will be held here in the new year. That excellent meeting, the European Schools Championships, for the organisation of which Mr. A. Clarke of the Armenian College is entitled to much credit, is on this week and the enthusiasm has been delicious.

The London Musical Comedy Company is finishing off its tour at the Empire this week and we understand that this is the last appearance of that fine all-round artist, Madeleine Rossiter, in India. The Empire has started a series of Sunday evening concerts and the North Stafford Band was well received this week with a largely classical programme; the Calcutta Symphony Orchestra's work is obviously bearing fruit. Incidentally their prospectus for the coming season is published with a satisfactory list of guarantors, and Calcutta now joins the cities which maintain a full orchestral organisation; all credit to the School of Music who have worked for many years to this end.

Markets.

The jute market has firmed up during the past few days as a result of a good inquiry from mills; this applies to good jute only, the market of low quality being neglected. Buyers have shown themselves more interested in gunnies for the forward positions and with sellers keen on doing business a better turnover has resulted. In the piece-goods market, inquiry has been fairly general, but the actual business transacted has been small, as Mofussil dealers continue to buy from hand to mouth, as they are confident that bazaar values will decline as a result of the lower tendency of Home prices.

Tea sales here showed a slight improvement on the prices obtained in the previous weeks, especially for good qualities which in the case of Darjeelings amounted to as much as an anna a pound increase; other descriptions were fully firm at previous rates.

On the Stock Exchange, Government Securities have tended easier and there is an obvious lack of buyers at the present time; the general feeling is that the tendency is towards a slightly lower level of rates in the near future. Jute shares have improved further since last week; the market opinion is that the September reports and in some cases those for December will make a poor showing but that the early months of 1927 will see an improvement to be followed by bumper reports and big dividends at the latter end of the year. It seems a little early to anticipate a return to the conditions obtaining in 1924-25, but there are indications that the market is in for a considerably better time in the future. Further profit-making is being done in coal shares and apart from the higher priced shares, which are fully firm, there has been less keenness shown on the part of buyers. Teas have been scarcely mentioned and a similar remark may be made in regard to rubber shares.

The Exchange market closes quiet for near positions but weak forward owing to advices from Bombay: Ready T.T. is quoted at 1s. 5 13-16d. Money continues very easy.

THE INDIAN MAIL.

Railway Fares.

The East Indian Railway announces that, early in 1927, it will return to the pre-War practice of issuing return tickets at 1½ times the cost of the single fare: and, at the same time, will reduce the single fares to a cost only a

LONDON CITY MISSION.

AYAHS AND AMAHS' HOME.

The Institution—the only one of its kind in the great Metropolis—is conducted on lines approved and supported by the India Office.

The Society is prepared to receive Ayahs and Amahs of approved character for long or short periods, and introduce them (if disengaged) to families about to travel to the East.

For Terms and Conditions apply to the

LADY SUPERINTENDENT, 4, King Edward Road, London, E.9.; or to

J. NEWCOMBE GOAD, Secretary, Foreigners' Branch, Mission House, 3, Bridewell Place, London, England.

fraction above the pre-War price, which used to be an anna (1d.) a mile first class, ½d. a mile second class, and rather less than ¼d. a mile third class. Other leading railways in India are expected to follow suit; but the position is complicated by the fondness of the Indian traveller—especially the third class traveller—for travelling without a ticket. It was stated at the Railway Conference that, last year, over 1¾ million passengers were detected travelling free, and over a million during the first six months of 1926: and the speaker went on to say that, when it is considered that passengers detected in travelling without tickets are only a proportion—and quite possibly a small proportion—of those who make free use of the railways, it will be realised that those who do pay have to do so not only for themselves but for others also.

It is true that the practice is not so entirely blameworthy, at any rate in its inception, as would appear from the bald statement of facts. At many railway stations in India, the booking arrangements are so faulty and inadequate—particularly in the matter of the opening of the booking office only a short time before a train is due to leave—that a perfectly honest traveller is often faced with the alternative of travelling without a ticket or not travelling at all. There always have, of course, been many people who deliberately avoid taking a ticket; but even those who, perhaps, made the first step innocently enough, have made it a regular practice of late: and attempts by the railway authorities to tighten up the inspection of tickets have been fiercely resisted, generally with abuse and quite often by force, in resentment at the loss of what the defaulters have come to look upon as an established prerogative. Statistics, however, show that the new precautions are producing good results: and lead to the hope that, in the course of time, the practice of travelling without tickets will be reduced, from the abnormal frequency of late years, to a reasonable normal such as that with which railway companies have to contend in all countries. The East Indian Railway, at any rate, is building on this hope: and, in the interests of the honest traveller, one may trust that it will be proved to be justified in doing so.

Electricity in Lhasa.

A story that was in circulation some months ago, regarding the murder of a Tibetan engineer who was taking electrical machinery to Lhasa, has now been proved to be incorrect. The engineer arrived safely in Lhasa, with the greater part of his machinery, though some of it was lost on the high passes as the result of the accidental fall of some of the baggage-animals over the cliffs. The power-house at Lhasa was said, when the report left, to be nearing completion: and it is not unlikely that, by this time, the streets of Lhasa are already lighted by electricity. An Indian paper, in reporting the facts as now ascertained, remarks that, in this respect, the city of the Dalai Lama is more progressive than many a city in India. He need not have confined his remarks to India—one of the greatest shocks experienced by the present writer when, as a returned wanderer from India, he proposed to rent a house in Kew, was to find that it was not equipped with electricity: and subsequent experience has only confirmed him in the belief, then impressed on him, that England is, if anything, behind India—to say nothing of Lhasa—in this important particular.

Physical Training for Cricketers.

An enterprising Indian who runs a Physical Training establishment at Bombay has publicly announced his decision, "in order that our Bombay cricketers may be enabled to make a good all-round show against the M.C.C., to place his Health Home and all its apparatus (except the Mechanical Horse) at the disposal of all cricketers selected by the Committee to play against the M.C.C. free of any cost from to-day onwards to the day the matches get over." He feels sure that cricketers will do well to accept his offer, because "if they go through certain vigorous body-building exercises every day, they will be able to make a better stand all round, as a well-developed physique adds a lot to a cricketer's success": and offers, if the players can select a convenient hour of the day, that he will "personally conduct a special class for them, and give them such physical training only as will tone them up admirably in a short space of time." It was announced the other day, that Mr. Gilligan had cabled for an extra bowler: and this offer perhaps supplies the reason for his decision to strengthen a team that, in most people's opinion, is already more than strong enough—alarm at the prospect of the brawny athletes who will have to be met at Bombay. Perhaps the Professor will extend his offer to the Army in India polo team—without the omission of the Mechanical Horse.

A Sea Adventure.

The steamer Talamba, one of the new large mail steamers of the Apcar Line, which trades between Calcutta and China, has reason to know that the days of adventure at sea are not yet at an end. On her last voyage she took on board at Singapore about eleven hundred Chinese deck passengers and 60 Chinese deportees, the later under an armed guard of ten Sikhs of the Singapore Police. The deportees started a quarrel amongst themselves, with the result that one man was stabbed dead and two others seriously wounded. The dead man's friends demanded that the murderers should be handed over to them to be dealt with in accordance with their own lights, and when this was refused they broke into open insurrection and tried to break out of confinement. Wireless got to work and a warship was sent from Hongkong to the assistance of the ship; but an anxious day and night passed before the sight of a naval guard reduced the deportees to cowed submission. The fifty saloon passengers must have had more than a few thrills when they thought of the possibility of the deportees working up the odd thousand Chinese into a ferment. Steps have now been taken to render the recurrence of such troubles impossible.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
London, Tuesday Morning.

Cotton-Growing in Turkey.

Like so many other countries Turkey is endeavouring to take full advantage of cotton growing as a medium for the improvement of her economic position. In her case it is no new development, for cotton growing is a very old-established Turkish industry, and for three years prior to the War the output was estimated at well over 100,000 bales. Subsequently until 1922 the production was of insignificant dimensions, but for that year it totalled 30,000 bales, and since then it has steadily improved until for the present year it is estimated at about 120,000 bales, which is roughly the peak attained before the War. There are two main cotton districts in Turkey—Adana, which is by far the most important, and Smyrna—and the cotton grown is of two kinds, native and "de secours," but the latter takes a second place to the former, and of the present crop all but 5 per cent. is said to be of the native variety. It goes without saying that the Turkish crop has not been unaffected by the large American production of the last season or so, and this year's prodigious American crop is likely to have its repercussions in the Adana and Smyrna regions. Obviously the more competition America has to face in regard to this crop, the demand for which must steadily increase as the world's population expands, the better, but whether Turkish cotton will be able to hold its own in the face of increasing competition must remain to be seen. Certainly cotton is not going to be the remunerative crop that Turkey anticipated when she began her efforts to develop it again in 1923. *En passant* I might mention that the native cotton of Turkey has one unique characteristic, for the ripe pods do not open on the plant, thus enabling a cleaner product to be obtained and avoiding waste.

Egypt's Irrigation Plans.

It would be perhaps not unnatural if the decision of the Egyptian Government to proceed with the construction of the Nag Hammadi barrage in preference to the Gebel Aulia Dam should occasion some surprise. After all, as I indicated last week, the White Nile scheme was originally planned to precede the barrage, not the barrage the dam. To some extent, therefore, the Egyptians are putting the cart before the horse, for the barrage was partly intended to meet the situation that would arise through the construction of the dam. The reason for the present decision is probably to be found in the fact that the barrage is wholly in Egypt, whereas the dam would be in the Sudan. There is also the question of cost to be considered. The cotton crisis has modified the economic situation in Egypt to a marked extent, and as it is impossible to tell at the moment what calls may be made on the Government, there must naturally be a tendency for the time being to husband resources and to avoid expenditure which, however necessary, can yet be postponed without any pronounced disadvantage for a few years. The dam is an essential part of the Egyptian irrigation programme, and no doubt it will be the next great project to receive attention.

A Trade Opening.

One of the shortcoming of British traders is their failure to realise the effect of changing customs in the Near East. When Turkey abandoned the fez recently in favour of European headgear there was a great opportunity for our hat and cap manufacturers, but it cannot be said that they took anything like full advantage of it. And there have been other instances. What has made me touch on this subject is because I have just been reading of the development of the bicycle habit in Turkey. If one took the old-fashioned view of the Turk it would be difficult to associate them with this form of locomotion, but actually bicycling is spreading, and last year 3,000 machines were imported into Turkey, the bulk of them coming from Germany, whose competition in this and other Near Eastern markets is becoming increasingly evident. It is worthy of not that four-fifths of these bicycles were for Anatolia. The German success in this market is attributed to the care taken to cater for the local requirements. As British bicycles have nothing to fear from competition with German or any other foreign makes, it seems incontestable that our share of the trade should be larger than it is.

The British Industries Fair.

The most satisfactory accounts are forthcoming with regard to next year's British Industries Fair. It was noticeable last February at the White City that there was room for many more exhibitors. This time it will not be so, and the fact that there has been a rush to exhibit both at the White City and at the Birmingham section of the Fair is, I think, symptomatic of the change that is taking place in the business outlook generally in this country. Last February we were facing the possibility of an industrial crisis, which, as we have only too good reason to know, developed in accordance with the most unfavourable anticipations, and has effectively prevented us from playing our due part in the revival of world trade. Now at long last the industrial sky seems to be clearing, and with improving conditions in so many countries, there seems every reason to look forward with hope to 1927 as a probable harbinger of better things. And it is because, in my view, the business world here as a whole is now taking an optimistic view of the outlook that there is this demand for space at the Fair. It is incidentally a tribute

to the utility of this institution as a medium of trade, and it is satisfactory to know that it is so widely appreciated.

Sudan Trade Position.

The figures for the trade of the Sudan for the first eight months of this year show a continuance of the improvement which has been so noticeable of late. With the exception of re-exports, every heading shows a substantial increase, this being particularly in evidence as regards Government imports and the exports. For the same period last year the Sudan had an adverse trade balance of roughly £E180,000, and this has been turned into a favourable one of about £E700,000. When it is borne in mind that this result has been achieved in a time of falling cotton prices it will be appreciated how great an advance has been made. Turning to figures, the total trade for the period amounted to £E8,416,542, which compares with £E7,003,409, and it seems safe to prophesy that this time the total will be well into eight figures by the end of the year. The value of the imports was £E3,695,944, as against £E3,433,857, Government imports totalling £E1,269,861, an increase of £E199,964, and public imports £E2,426,083, an increase of £E62,123. The value of the exports was £E4,394,915, which compares with £E3,254,788. It will be noted that the development of public imports is slow, but it has to be remarked, as I have pointed out before, that the great extension of cotton growing has so far only affected the economic position in a limited area.

The Rubber Position.

There has been nothing until recently to call for comment in respect of the rubber market. But the situation which has now arisen is such that it may well perplex those who are interested through holdings in one or other of the many rubber companies. We have the seemingly anomalous position of a reduction of output to 80 per cent. for the current quarter, and still a constantly declining price. Until this week the low price could be partly explained by the consistent increase in the London stocks, but the sharpest decline took place yesterday when for the first time for a long period there was an actual reduction in stocks. It is said that this was due to the possibility of the increased use of reclaimed rubber, but that seems unlikely on the face of it. Even were it so, there is the certainty that uses for rubber are developing, and he would be a confident person who would assert that with the revival of trade existing stocks will be sufficient. As things appear at present it seems nearly certain that there will be a further cut in production at the end of the quarter to 70 per cent., and, given the revival of demand, that should mean much higher rubber prices than we have seen for some time.

COMMENTATOR.

The exports of senna from the Sudan for the first nine months of this year amounted to 312 tons as compared with 634 tons for the same period last year.

The traffic receipts of the South Indian Railway Company for the week ended October 20 amounted to Rs.10,10,226, making the total from April 1 Rs.3,05,30,355. The figures for the corresponding periods of 1925 were Rs.9,10,999 and Rs.3,10,79,270.

Company Meeting.

SUDAN PLANTATIONS SYNDICATE.

Annual General Meeting Adjourned.

The nineteenth ordinary general meeting of the Sudan Plantations Syndicate, Ltd., was held on November 24 at Winchester House, Old Broad Street, E.C.

Mr. F. Eckstein (Chairman of the company) presided, and there was a large attendance of shareholders.

The Chairman said: Ladies and Gentlemen,—To my very great regret, I have to tell you of a deep disappointment both to me personally and, I am afraid, to you. Up to the last minute I had hoped to be able to make a full statement regarding our negotiations with the Sudan Government for an extension of the period of our concession. No one can regret more than I do that I am not in a position to do so, and that I must ask you to allow me to adjourn this meeting for a fortnight. The negotiations are to all intents and purposes concluded, but, the last formalities being still incomplete, I must ask you not to press me for particulars of our new agreement until we meet in a fortnight's time.

It is hardly necessary for me to say that the reasons for this adjournment need not cause you any anxiety whatsoever. (Applause.) It is purely that, dealing with the Government as I have to do, there are certain formalities to go through, and there is just one which is not completed. I will be able, I hope, in a fortnight's time to put before you a statement which I think you will all like. (Applause.)

I regret very much to have had you all brought here, but it is really at the very last moment that this unfortunate hitch has occurred. As I say, however, do not be alarmed about it; there is nothing to be worried about. I now move: "That this meeting do stand adjourned until Wednesday, December 8, at the same time."

We shall meet in a larger hall, and I hope you will all come, because I shall have a good statement to make to you then. We wanted to get a larger hall this time, but unfortunately could not get it.

The Hon. Arthur M. Asquith, D.S.O.: Ladies and gentlemen, I have great pleasure in seconding this motion, and I am sure you will not want to press the Chairman with questions which it does not suit him or the company to answer to-day. (Hear, hear.)

The motion was carried unanimously.

The Chairman: I am very much obliged to you, and I hope you will accept my apologies for bringing you here for nothing.

The meeting then stood adjourned.

The adjourned meeting will be held at River Plate House, Finsbury Circus, on Wednesday, December 8, at 12 noon, no suitable hall being available at Winchester House at that hour.

"THE INTERNATIONAL MERCANTILE DIARY AND YEAR BOOK."

It is no exaggeration to say that "The International Mercantile Diary and Year Book," the edition of which for 1927 has just been issued, has made for itself a special niche on the business man's bookshelf, for it gives just the information that is required in commerce, and, be it added, in a readily accessible form. The present volume, which, by the way, is in the eleventh annual edition, contains a number of new features such as "Abbreviations with explanations of Phrases used in Commercial Transactions," and the "Import Tariff of the United Kingdom." The year book is divided into two main divisions. The first gives calendars, details of the British system of weights and measures with their metric equivalents, interest and conversion tables, freight calculation tables, measures, etc. The second is the International Section in which the information necessary for traders is set forth concisely under each country. It remains to add that the year book is published by Syren and Shipping, Ltd., 93, Leadenhall Street, London, E.C.3, at 10s. 6d. net.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 30.

The Stock Exchange has again passed a very quiet week and prices on the whole have been dull. While the termination of the long and costly coal dispute is now in sight and the manner of its ending is not such as to produce any outburst of optimism, and as the quotations of those securities most likely to benefit from a resumption of normal working in the mines had been marked up in advance, very little effect upon prices has been produced by the latest developments. The home railway market for example, which should be the first to feel the benefits of a resumption of normal coal output, has this week been on the dull side, and this in spite of the fact that the latest traffic returns show that gross receipts are rapidly approaching normal, last week's aggregate decline amounting to only £398,000, which is a small figure compared with the weekly decreases recorded in the early days of the stoppage. In passing, it may be noted that the London and North Eastern, which was the hardest hit of the four lines, is making the best recovery, although up to date its gross receipts show a decline of over £9 millions in comparison with the corresponding period of last year.

In the gilt-edged market prices have kept fairly steady, though there has been very little business passing. The new Belgian scrip maintains its strength at well over 7 premium. Several sections were dominated by fluctuations in the franc, especially the more speculative markets in which dealings on French account have been a prominent factor in the past few weeks. In the industrial section Dunlops have been active and have advanced to a high price on speculative buying resulting from rumours that the shares will shortly be written up from 6s. 8d. to their old denomination of £1. Rumour has also been busy with the possibilities of an interim dividend, and it has also been reported that a Dunlop speciality is being adopted by Ford Motors. The rubber market is still languishing in quietude, and business in the oil section has been confined to the professionals. Whether December will see a turn for the better in the Stock Markets remains to be seen, but there are those who expect no great improvement until the New Year. It must not be forgotten, however, that next year the full effects of the coal stoppage upon industrial profits will make itself felt in the shape of lower dividends and reduced profits, and this will tend to counterbalance optimism engendered by whatever signs of revived industrial activity there may be. In the meantime an interesting feature is the continued evidence of a large volume of funds available for investment, which is afforded by the ready response given to recent issues. In most cases, it may be noted, the issue price appears to have been more accurately gauged than was the case for example with the Belgian loan.

The National Revenue.

Now that the industrial outlook is clearer it may be of interest to call attention to the figures of public income and expenditure, although, of course, it is as yet too early to attempt to draw from them any conclusions as to possible results at March 31 next. It may be recalled that the Chancellor of the Exchequer estimated the direct cost of the general strike in May to the Exchequer at less than one million sterling, but no estimate has yet been given as to the effects of the seven months' coal stoppage upon the Treasury's income for the current year. These, in fact, are likely to be heavier in 1927-28 when income tax assessments come to be made on reduced profits. For the current year to date revenue shows a decline of £23 millions in comparison with the same period of 1925-26, while the Chancellor budgeted for an increase of £12½ millions. Expenditure is only £500,000 higher than it was at this time last year. The excess of expenditure over revenue at the present time is £83 millions as compared with £60 millions at this time last year, but as we have said this affords little indication as to the year's results, for last year's November deficit of £60 millions was reduced by the end of March to £14 millions and a similar movement is by no means unlikely to occur before next March.

Fifteen-Twenty Year Investments.

From time to time the investor is seeking stocks redeemable at a given date, say in 15 or 20 years time. There are a number of contingencies that may thus be provided for, such as retirement or the provision of an endowment for a son or daughter. It is true that one means of providing for this is an insurance policy. But though an insurance policy may have a surrender value, certain investors may prefer to invest the money in securities negotiable on the Stock Exchange, so that in times of need they can readily obtain cash.

Only well-secured stocks may, of course, be considered for such a purpose, since, among other reasons, price fluctuations are likely to be comparatively small and the market relatively free.

Debenture stocks guaranteed as to principal and interest by the British Government under the Trade Facilities Acts are, in effect, British Government securities. The Sudan Construction 4½ per cent. debentures thus guaranteed are redeemable 1930-45 and give a return of approximately £5 3s. per cent; the amount outstanding is £2,000,000. Turning to Colonial stocks, the New Zealand 4 per cent. inscribed, redeemable 1933-1943, yield £5 2s. per cent, there being practically £4,000,000 outstanding. The Austrian 6 per cent. guaranteed sterling bonds might be considered, for, redeemable 1923-43, they give a return of £6 2s. per cent. Home Corporation stocks might be represented by the Cardiff 3 per cent. redeemable 1914-54, on which the yield is £5 4s.

Last year the construction of 548 miles of new roads in Greece was authorised.

Holders of Bulgarian Four and a Half per Cent. Loan, 1909, of British, French, Dutch, Italian, Belgian, Spanish, American and Swiss nationality, are advised that coupons due 1st December, 1926, from the new coupon sheets are now payable at 30 per cent. of their nominal value in any currencies mentioned thereon at the counting house of J. Henry Schroder and Co., 145, Leadenhall Street, E.C.3. provided that their numbers do not appear on the lists of numbers of bonds, coupons from which were paid during 1916 in Germany, Austria or Bulgaria. Coupons may now be lodged on any day between the hours of 11 and 2 o'clock.

THE BOOT AND SHOE INDUSTRY OF ALEPPO.

The manufacture of shoes and slippers in Aleppo, Syria, at present holds second rank in the local industries, both from the standpoint of consumption of raw material and the supplying of employment (says the American Vice-Consul at Aleppo, Mr. Paul H. Alling, in a recent report). All types and styles are produced, all sorts of upper and sole leather are employed, and the best quality local product compares favourably with the high-grade footwear manufactured in Europe. There are from 300 to 350 shops engaged in the manufacture of various qualities of shoes. In addition, about 100 shops specialise in the manufacture of red slippers. Approximately 50 shops produce slippers of European design only. None of these shops are large, the average number of employees being five or six. The number of persons employed in the industry is estimated at 2,500. These small factories are owned and managed by artisans, who, in addition to management, take an active part in production. Wages are 25 to 30 per cent. less than those prevailing two or three years ago. There are no fixed hours of labour, work beginning soon after sunrise and ending at sunset.

Approximately 75 per cent. of the shoe manufacturers —including all of those producing the best qualities— make shoes only on order. These shoes are sold directly to the consumer by the maker. Properly speaking, there are no wholesalers either in the shoe or slipper trade. Retailers from the villages purchase their supplies direct from the manufacturer or retailer in Aleppo. With the exception of tanned sheepskins and half-tanned goatskins, both of which are produced locally, practically all of the materials and tools used in the industry are imported from abroad. France is the chief source of supply of sole leather at present. All of the leather used for the inside finishing of shoes is prepared by small tanneries. It consists chiefly of half-tanned goatskins, the raw skins being obtained from local herds. A certain amount of cotton duck brought from England is employed as the inside finishing for the lower grades of shoes. All of the sheepskins which are used in the manufacture of the native red slippers are tanned in Aleppo from skins obtained in the surrounding district. Dry buffalo skins, which are also used in the making of red slippers, are imported from China and India and tanned in Aleppo.

The small hand tools are imported chiefly from France. The small number of sewing machines used in the shops are supplied by the local agency of an American manufacturer. Shoe forms are obtained largely from France and Italy, although a few are also brought from the United States. Shoe strings and laces are supplied by Belgium and Italy, and the former country also furnishes nails. Cardboard, which is used to a considerable extent in building up heels on low-grade shoes, is obtained from Italy, Austria, and Sweden.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked L.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

EGYPT.

Water Installation.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply, delivery, and erection of an installation for purification and distribution of filtered and unfiltered water. December 20.

Dynamo, Etc.—The Director-General, Mechanical Department, P.W.M. Cairo, invites tenders for the supply and erection of a dynamo and one internal combustion engine at the Survey Department, Giza. January 10.

Worm and Rack Gearing.—The Director, Delta Barrage Directorate at Delta Barrage, invites tenders for the supply of 40 sets of worm and rack gearing for regulating gates, approximate total weight 65 tons. Delivery must be guaranteed not later than March 15, 1927. December 7.

Semi-Diesel Engines.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply of two semi-Diesel engines for an oil tanker for Public Works Ministry, Cairo. December 26.

THE SUDAN.

Barges.—The Inspector-General, Egyptian Irrigation Service, Khartoum, invites tenders for the supply of one or two first class and two to four second class living barges for use in the Southern Sudan. February 15.

ROUMANIA

Window Straps.—Tenders are invited by the Bucharest Tramway Company for 1,500 window straps. The price is to be quoted free Bucharest, without Customs duty, and samples are required. December 14. (D.O.T.)

TURKEY.

Paper and Cardboard.—The Turkish Tobacco Monopoly invites tenders for the supply of 525,000 kilos of paper and cardboard. December 8. (D.O.T.)

Screw Traversing Jacks.—The Anatolian Railway Administration invites tenders for the supply of 40 traversing screw jacks with slides for locomotives, each capable of resisting a weight of 25 metric tons. December 21. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Scindia for Bombay (Birkenhead, December 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Imani for Port Said, Colombo, Madras, and Calcutta (London, December 11).

Bibby Line—S.s. Oxfordshire for Port Said, Colombo, and Rangoon (Birkenhead, December 15).

British India Line.—S s. Malda for Colombo, Madras, and Calcutta (London, December 4); s.s. Rohna for Bombay and Karachi (London, December 11).

Cunard Line.—S.s. Tyria for Casablanca, Gibraltar, Malta, Corfu, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Glasgow December 8, Liverpool and Swansea December 11); s.s. Pavia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Venice, Trieste, and Fiume, also at Ancona if inducement (Liverpool December 24, Swansea December 28).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 22).

P. and O. Line.—S.s. Ranpura for Bombay (London, December 3); s.s. Nankin for Colombo, Madras, and Calcutta (London, December 11).

Prince Line.—S.s. Algerian Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (Manchester, December 21).

Ellerman and Papayanni Lines.—S.s. Flaminian for Algiers*, Malta, Syra, Smyrna, and Constantinople (Liverpool, December 1); s.s. City of Lancaster for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 11); s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 22); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 31); s.s. Assyrian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 1); s.s. Grodno for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool, January 1). * Subject to sufficient inducement. Transhipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

IRRIGATION IN INDIA.

At the opening meeting of the current session of the Institution of Civil Engineers, Mr. Frederick Palmer, C.I.E., of Messrs. Rendel, Palmer and Tritton, the President of the Institution, delivered his inaugural address in which he dealt with engineering works in India. His survey of the history of irrigation in India, a most comprehensive and interesting review, is given *in extenso* below.

The need for irrigation works in India, he said, has arisen from the extremely varied meteorological conditions which prevail in that country. Normal rainfall varies from nearly 500 inches per annum at Cherrapunji in Assam to less than 3 inches per annum in Upper Sind, while the maximum has reached over 900 inches per annum at the first-named place and the minimum nil in Sind. Another factor is the unequal distribution of the rainfall. In the south-east of the Peninsula the heaviest rainfall occurs in the three months October to December, but elsewhere precipitation is confined almost entirely to the south-west monsoon period, June to October. In the winter months, one or two inches normally fall, but in the hot season, March to June, there is practically no rainfall.

The problem is to conserve, store, and distribute the rainfall in such tracts as admit of this procedure. But by far the greater part of the country, east of the Sydharis, or "Ghats," of western India, is a high-lying rocky plateau subject to uncertain rainfall and having rivers which, for the greater part of the year, are nearly dry. The whole area is very unfavourably situated in this respect, and although by the construction of tanks, or reservoirs, some benefit is obtained, the greater portion of this central plateau must remain for ever unirrigated. In Northern India, however, there is a huge area of territory watered by rivers which rise in the Himalayas, and as these are fed by melting snows in the hot season, there is always a supply of water, reliable within limits, which has been harnessed for distribution. The Indus and its tributaries, the Jhelum, the Chenab, the Ravi, the Beas, and the Sutlej, flow in a south-westerly direction; while the Ganges and its main tributary from the Himalayas, the Jumna river, flow south-easterly. All these rivers have been brought into use, and their canals command large areas in the Punjab and the United Provinces. But with all these works, only about 11 per cent. of the cultivable land in India is irrigated by canals, about 5·3 per cent. from wells and 6.2 per cent. from reservoirs, mainly in the Madras Presidency, leaving 77½ per cent. unirrigated.

It can be seen how precarious was the position of the country before the days of canals. Nearly 90 per cent. of the cultivable area was wholly dependent upon rainfall, and there were but few years when failure of the rains did not lead to famine in some part or other, and, in some cases, to disastrous famine. It is true to say that millions of lives have been lost in India from sheer starvation due to drought and consequent famine. Fortunately, these disasters are practically unknown to-day, for, with assured crops in large tracts and ample railways for distribution, food can now be taken to any threatened area—a thing which formerly, even in comparatively recent times, was quite impossible of accomplishment.

The history of irrigation in India extends back through the centuries beyond the commencement of the Christian era. Wells have been used from time immemorial, and in Southern India tanks, or reservoirs, have existed for centuries. The drawing off of flood waters from some of the large rivers by means of inundation canals was practised in very early days, and traces are found of channels which have for ages been buried in forest growth. The weir across the Cauvery River in Madras provided water for the delta lands of Tanjore for many hundreds of years. The Eastern and Western Jumna canals existed as long ago as the fourteenth century, and there are other works of equal antiquity. But in no case was there controlled irrigation. The canals were fed by the high waters of rivers in flood, and so long as the flood was not excessive, great benefit was derived from their use; but in times of very high river floods the canals too were flooded, and carried devastation instead of prosperity to the territories served. Similar works must have existed in Mesopotamia and in Egypt thousands of years ago, and they are known to have existed in Burma.

The first work by British engineers in India was the reopening of the Western Jumna Canal in 1821. From want of sufficient funds this undertaking was not a success at first, but mistakes then made were corrected one by one until it became a very flourishing concern. In 1824, Colonel (afterwards Sir) Arthur Cotton put forward proposals for establishing a stable régime in the Cauvery, where accumulations of silt had jeopardised the utility of those ancient works; and, with the exception of some mistakes which have since been rectified, these proposals proved effective.

Commenced in 1842 and opened in 1854, the Ganges Canal in the United Provinces was the first work wholly constructed by the British in India. It was proposed, designed, and built by Colonel Sir Probv Cautley, of the Bengal Artillery, and still ranks as one of the largest in the world, serving in many respects as a model for those since built. Four large torrents are encountered, two of which are carried over the canal on masonry superpassages 200 and 300 feet wide: a third torrent is passed into the canal on one side and out on the other side through a regulator weir more than 700 feet long. The fourth, the Solani River, is crossed by a fine aqueduct of fifteen arches of 50 feet span, the trough of the canal being 10 feet deep and 164 feet wide in the clear, excluding roadways on either side. The embankments carrying the canal to and from the aqueduct are over 2¼ miles in length and 36 feet in height.

In 1846 the Godaveri Weir was built. It is in four sections, separated by islands, with a total length of more than 2 miles; and the canals drawn from the impounded water have converted the Godaveri delta into one of the richest tracts in the Madras Presidency. This was followed by a project of almost the same magnitude on the River Kistna, and several minor schemes in the same Province. The Upper Bari Doab Canal in the Punjab, commenced in 1851, was on a somewhat small scale than the Ganges Canal, but it serves to irrigate 1¼ million acres.

Following upon this successful activity there was a "boom" in irrigation. Sir Arthur Cotton put forward several schemes, which included great canals connecting for navigation Madras with Poona and Bhatkal on the west coast, with arms stretching northwards to Ahmadnagar and southwards to Mangalore. A somewhat similar project was started in Orissa, with a high-level canal connecting Cuttack with Calcutta, which was eventually to be carried to Cawnpore and even Karachi, and connected up with the Madras-Bhatkal system. Sir Arthur Cotton's ability, undoubted as an engineer, did not extend to the realms of finance; but, blinded by the magnificent results obtained in his earlier works, both the authorities and the public lent their aid to the formation of companies to embark upon these huge projects, all of which ended in disastrous failure and in the Government having to buy out the companies. This experience led to the adoption in 1866 of the policy of Government loans for productive works, and the great development of irrigation works in India which has taken place since that time has followed upon the acceptance of this policy.

Five great works were inaugurated—the Sirhind, the Lower Ganges, the Agra, the Lower Swat, and the Mutha Canals, and several smaller works. The Sirhind Canal draws its waters from the River Sutlej and commands 8,500 square miles, 4,000 of which are in British territory and 4,500 in Indian States, mainly Patiala. By agreement between the Government and the Indian States concerned, the capital cost was divided between the parties in proportion to the areas served. The head works of the canal consist of a weir nearly ½ mile long at Rupar, where the Sutlej emerges from the Siwalik Hills, and, soon after leaving the river, the canal passes underneath two great torrents, the Sugh and Budki, with a combined discharge of 60,000 cubic feet per second. The superpassage is 450 feet wide, with parapets 14 feet high, and is carried over the canal on seven arches of 31 feet 0 inches. A little further along the Siswan is carried over the canal on a superpassage of about the same length, but only 250 feet wide. The total length of the channels in this canal system is 3,733 miles, being exceeded only by those of the Upper and Lower Ganges Canals, which are 3,861 and 3,796 miles respectively. The area irrigated is 1,600,000 acres, and on the British portion a return of 11½ per cent. on the capital expended is realised.

The Lower Ganges Canal system includes a weir 3,800 feet long across the Ganges at Narora. It is fitted with falling shutters, which enable the level of the normal cold-weather supply of the river to be raised by 10 feet to feed the canal This canal joins the original Ganges Canal, now usually known as the Upper Ganges Canal, at Gopalpur, and has relieved that canal of a considerable amount of irrigation. The Kali Nadi is crossed by the main canal at Nadrai (Mile 34), but the original aqueduct, designed to pass 18,000 cubic feet a second, proved to be quite inadequate, as, after standing for 6 years, one-fourth of it was carried away in 1884 by a flood of over 40,000 cubic feet a second. The injured portion was temporarily replaced, but before any permanent work could be started, the river, in July 1885, came down in flood a mile wide, carrying 140,000 cubic feet per second. This was due to a cyclonic storm, which gave a rainfall of 20 inches in 24 hours over 1,000 square miles of catchment area. The new aqueduct consists of fifteen arches of 60 feet span, with a width of 149 feet, the piers being founded on wells sunk 50 feet below the river bed. It is one of the finest works in India, and perhaps the largest of its kind in the world. The works comprise over 15,000 lineal feet of well sinking, 40,000 cubic yards of concrete, and 175,000 cubic yards of brickwork, and gave employment to 4,000 workpeople for 4 years, being completed in 1889. The surplus revenues from the two Ganges canals, which together irrigate 2½ million acres over a length of nearly 500 miles of country served, amount to well over 5 millions sterling, after paying working expenses and interest charges.

The Agra Canal takes off from the Jumna River just below Delhi, where a weir ½ mile long impounds water 10 feet above the river bed level, with shutters to hold up a further depth of 3 feet. It is a comparatively small system, irrigating some 300,000 acres.

The construction of the Lower Swat Canal was prompted mainly by political motives, in the hope that the existence of such a work would tend to pacify and settle the Mohmand Border at the extreme limit of British India beyond Peshawar. It was built under the greatest possible difficulties, in a country barren and almost uninhabitable, while about it lay an inhospitable land peopled mainly by predatory marauders. Opposition was experienced from the tribes immediately beyond the frontier, while the people within British borders were for a long time either openly or passively hostile. Military guards had to be employed for the protection of all workpeople, and every engineer's bungalow was a fort, guarded at night by sentries, and from which no one ventured after dark. The canal head is formed by a reef which runs across the river, 2 miles above Abazai Fort, but subsequently a weir was built at Abazai.

Although originally estimated to serve 24,000 acres, the system became so popular, when once its advantages were perceived, that the irrigated area was extended to over 160,000 acres, and yields a return of 10 per cent. on the capital outlay. Not only has the work been eminently successful financially, but politically it has more than achieved all that was ever hoped for. From a barren, uninhabited wilderness in 1875, the country had become by 1895 a wide expanse of cultivation, dotted with villages occupied by a law-abiding and contented peasantry. Avenues of trees sprang up along the canal and its distributaries, and, while in 1875 no officer was permitted to go outside cantonments without an armed escort, to-day the tract is as peaceful and secure as any in the Punjab.

It may be added here that 30 years later, the Upper Swat Canal system was commenced. This canal leaves the Swat Valley by means of the Benton tunnel, more than 2 miles long, through the Malakand range, after passing which the waters flow down the Dargai Nullah, with a fall of 300 feet in 5 miles, to Dargai, where a regulator distributes the waters in two canals. The engineering difficulties in taking this canal along slopes

cut up by ravines and torrents were enormous, and there are seven other tunnels aggregating a mile in length. The political difficulties were just as great, and this system ranks among the boldest projects yet constructed.

The last of the five main schemes referred to is the Mutha Canals project in the Bombay Presidency. It consists of a dam across the valley of the River Mutha, some 10 miles above Poona, about 1 mile long and 100 feet high above the river bed, with a canal on either bank. The main purpose of the canals was to afford a plentiful supply of water to Poona and to Kirkee, but, incidentally, irrigation is afforded to 25,000 acres. The works, commenced in 1869, were completed in 1879. There was no previous experience of a dam of this magnitude to draw from, and in honour of Colonel Fife, of the Royal Engineers, who designed the works, the impounded lake has been named Lake Fife.

There is probably no part of India more favourably situated in regard to rivers and more unfavourably in regard to rainfall than the country already referred to, lying between the Jhelum and the Sutlej rivers. This tract is traversed by the five great rivers from which the Punjab proper takes its name—the land of the five rivers. They are the Jhelum, Chenab, Ravi, Beas and Sutlej. The rainfall is scanty, by far the greater portion of the country having a precipitation of less than 15 inches per annum, and much of it less than 10 inches. Even these small rainfalls are liable to serious deficiencies in years of drought, and excepting some small cultivation on the fringes of the rivers, the whole vast stretch of country was formerly desert waste, with no resident population beyond a few nomad graziers.

Prior to 1880, with the single exception of the Swat Canal, the main object of canals was to improve existing cultivation, but in the Punjab the problem confronting the Government was not only to turn desert waste into cultivable land, but also to transport bodily whole communities into the new areas thus opened up. In 1882 an experiment was started with the construction of the Sohag and Para Canal from the Sutlej and the Sidhnai Canal from the Ravi. Colonization began in 1886, and the utmost difficulty was experienced in obtaining settlers. The jungle waste looked uninviting and the few indigenous inhabitants were decidedly hostile to strangers; but once the tide of colonization turned, no further difficulty was met with. The area commanded by the Sidhnai Canal was more than 400,000 acres, and the capital cost has been returned many times over by the surplus profits, which in 1920 exceeded 40 per cent. after paying all working expenses and interest charges.

The success attending this work encouraged the Government to proceed on a far greater scale, and in 1889 the Lower Chenab Canal project (the most extensive and successful irrigation system in India and probably in the world) was taken in hand. The tract to be served was one of extreme desolation, yet this wilderness has been converted into a veritable garden. The weir across the Chenab is 4,090 feet long, and the main canal, with a width of 250 feet, carries a discharge of 10,700 cubic feet per second, six times that of the Thames at Teddington.

(To be continued.)

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the fortnight ended November 13:—

The arrivals of sultanas since the opening of the season are estimated at 26,050 tons, and the sales to date are put at 25,240 tons. Closing prices, Smyrna, per cwt. c.i.f. London/Liverpool:—Type 12, 55s.; type 13, 57s.; type 14, 59s.; type 15, 61s.; type 16, 63s.; type 17, 65s.

The demand, as is usual at this time of the year, is trifling. Prices over the past fortnight have declined about 1s. The position, however, can hardly be regarded as weaker as very little fruit is offering for sale.

The arrivals of figs are estimated at 27,624 tons, and the sales to date are put at 26,783 tons. Stocks are practically exhausted and the season is now at an end.

NEW COMPANY.

THE ANGLO-BULGARIAN CORPORATION.

The Anglo-Bulgarian Corporation has been registered as a public company with a nominal capital of £500,000, in 450,000 cumulative participating preference shares of £1 and 1,000,000 ordinary shares of 1s. each. The objects are to acquire the benefits of the concession contained in an agreement dated April 27, and ratified by law on June 25, 1926, whereby the Bulgarian Government granted to the Bulgarian Development Company certain rights for the production of bacon and other edible products from pork in various forms for export from Bulgaria, for the building and operating of cold stores, for the establishment and maintenance between Bulgaria and the United Kingdom of a regular steamship service of refrigerator steamers with divers other rights and privileges, and to carry on the business of manufacturers, ship owners and brokers, general traders, etc. The first directors are:—H. S. Harrison-Wallace, Eastferry, Dunkeld, Scotland, Com. R.N., retired (managing director of Beardmore Oversea Corporation); V. C. Albu, 17, De Vere Gardens, W.8 (managing director of General Trading and Finance); H. J. Bruce, 4, Albert Road, Regent's Park, N.W.1, British delegate Bulgarian Reparation (retired); H. Baerselman, 43, Tylers Avenue, Southend (formerly Chairman of Baerselman Bros.); P. Zelenoff, 135, Chalfont Court, Upper Baker Street, N.W.1 (managing director and chairman Ornis Steamship Company); C. A. Landsdorff, 5, The Boltons, S.W.10 (foreign managing director of Central Trading and Finance). The registered office is at Finsbury House, E.C.2.

In September 63 merchant ships entered Port Sudan harbour, their net tonnage being 215,020. These figures compare with 58 vessels of 196,404 tons in September, 1925, and 49 vessels of 133,027 tons in September, 1924.

Exports and Imports

Cotton and Cotton Goods.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended November 24:—

Egyptian Futures.—Sakel Contract.—Rather more activity has been witnessed in this market during the past week, but price movements have generally been narrow, and it may be taken for a sign of the times when, instead of the customary five points between sellers' and buyers prices, trading in moderately important quantities has often been possible at a point margin. Prior to the publication of the American Bureau Report on Monday evening, further "short" covering and a limited amount of Continental buying kept prices steady; in fact, in the last few minutes' trading before receipts of the above, owing to the withdrawal of sellers, one or two small orders caused what proved to be afterwards an unwarranted jump of 15 points, January being traded in at 13.25d., the highest point reached during the week. On the reopening of the market the same evening, prices dropped about 25 points. Since this, sentiment appears to have become decidedly mixed, and, in consequence, the market is beginning to show an easier undertone, and has the appearance of weakening further. To-night's close shows declines of 28 points for the current and 22 to 24 points for distant positions.

Two important factors have cropped up during the week, the first is the reluctance of holders of near positions to face actual cotton, as the current position in Alexandria on the last day of trading declined one dollar per kantar, and the local near position, November, has shown a tendency to close in with the more distant options. The second factor is the rather disappointing trade reports that are coming to hand from spinners of fine counts, and undoubtedly Sakel cotton is not passing into consumption, as far as this country is concerned at any rate, in quantities sufficient to counterbalance the weight of supplies. There is little doubt that the substitute yarns, which were forced into creation by the relative dearness of Sakel last season and the year before, continue to be in vogue, and as these are purchaseable at the moment at, roughly, 3d. per lb. below the genuine article, they will probably continue in demand until differences become adjusted, or a decided change in the trade outlook takes place.

Movements in the Alexandria market have approximated fairly closely with fluctuations at this side. "Into sight" figures are becoming more "bearish," as, in spite of receipts being well below last year's figures, the stock against the corresponding period has gained, roughly, 600,000 kantars, and shipments to all countries show a decrease.

Although we do not consider that any pronounced downward movement will be witnessed for the immediate future, the market certainly shows signs of the increasing pressure of supplies, and, whilst hardly recommending sales, we certainly think that those who have leanings to the "long" side should defer their operations for the time being.

Upper Contract.—Business in this option continues restricted, and only one or two transactions have been reported daily. On the whole, prices have remained steady, even in face of the declining tendency of the American markets. We still consider that for those willing to take a long view, purchases of the later summer months will eventually prove profitable.

Egyptian Spot.—Business during the past week has been done on very restricted lines. Last Monday's American Bureau report, both before and after its arrival, exercised a restraining influence on the already decreasing volume of trade, and we anticipate that it will still require some days before the moral effect of the increased figures will have worn off. Practically, of course, its effect should have been negligible, but, with still one more of these baleful reports to come, it is not difficult to understand a would-be buyer's attitude. In the meantime, the improved conditions in the coalfields have so far failed to supply the needed stimulus to trade, although it is perhaps too early to express disappointment, as it will still require time before the price of coal finds its way to a satisfactory commercial basis.

The local spot inquiry has proved most disappointing; in fact, it is quite a while since spinners displayed so little interest, even some of the regular hand-to-mouth buyers, who have come to be regarded as certain, if small, outlets, having apparently dried up for the time being. Sakel has been in moderate, but steady, request for all qualities up to Good, prices paid ranging from 10.00d. to 16.50d. In Uppers a fair inquiry has been in evidence at from 9½d. to 10.00d. Outside these prices, business is scarce and difficult to arrange. Pilion at from 11¼d. to 11⅜d. has been in quiet request. Trade in Sudan cotton has again fallen away.

The market is flooded with sellers of cheap "outside" growths, who are doing their utmost to entice the spinners of Egyptian cotton. In this connexion, a good deal of testing and experimenting is undoubtedly going on, and, of course, the low prices asked (100 to 250 on American) are very tempting in certain cases. Generally speaking, competition to sell is very keen, and prices all round display considerable irregularity. A quiet business has been done in c.i.f. cotton, although not of a very general nature. Forwardings to spinners for the week ending 19th instant were returned as 4,770 bales Egyptian and 1,039 bales Sudan. Estimated sales 700 bales Egyptians and 700 Sudan. Quotations of Sakel have been reduced 20 points (Good exceptionally 30 points), whilst those of Upper are 30 points lower on the week. F.G.F. Sakel to-day 14.75d. F.G.F. Upper 10.20d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended November 18 state:—

Since our last report the futures market has been quiet with a steady understone. The week's summary of price movements is as follows:—Sakellaridis: November, 26.77 dollars, 0.70 dollars up; January, 26.34 dollars, 0.42 dollars up; March, 26.32 dollars, 0.20 dollars up; May, 26.45 dollars, 0.13 dollars up; November 1927, 26.70 dollars, 0.20 dollars down. Ashmouni: December, 17.54 dollars, 0.07 up; February, 17.80 dollars, 0.10 dollars up; April, 18.00 dollars, 0.15 dollars up; October 1927, 18.67 dollars, 0.15 dollars down.

Sakel.—There is very little to say about the market except that the brighter prospect of an early settlement of the coal strike in England have induced a somewhat more optimistic feeling. Operations during the week have been only moderate in volume and fluctuations have been between narrow limits.

Business with spinners is fairly satisfactory, and has consisted principally of cotton for prompt or early shipment; there has been rather more inquiry than usual for cotton for distant shipment, but we do not think that commitments for shipment after December are by any means large. As we said last week, we look for a steadying of prices round about present levels, especially as there is a movement to keep cotton up country, which, if put into effect, will relieve the market of some of the

pressure at present exercised by the exceptionally heavy daily arrivals. At the second November tender, no dockets were issued.

Uppers.—The good demand from spinners for this cotton has kept the market very firm. Our market is benefiting from the fact that the American long staple crop has not been a success, and prices of Uppers compare favourably with the competing growths of American.

The week's receipts amount to 391,387 krs. against exports 168.165 krs.; the stock in Alexandria stands at 2,435,561 krs.

Spot.—During the week under review a good business has been done and demand from abroad has been maintained. Sales amount to about 30,000 bales, of which we estimate 12,100 Sakellaridis, 16.400 bales Ashmouni and Zagora, 1,100 bales Pilion, 300 bales White and 100 bales Brown and Fouadi.

Sakellaridis.—A good business has been done and all styles have changed hands. Spot differences are somewhat dearer for the good grades, unchanged for the medium qualities, and easier for the lower styles. We would draw spinners' attention to the fact that, as far as we can see, the better grades of Sakel—from Good upwards—are in comparatively small supply in this year's crop, and a stiffening in the premiums of these grades might be expected as the season advances, provided always that the Government stock of cotton, which is chiefly good grades, is not suddenly put on the market.

Ashmouni and Zagora.—The demand for Ashmouni continues good, though Zagora is not in very good favour. All styles have been dealt in, though the medium qualities have attracted most attention. Except for the higher grades, which are inclined to harden, spot differences are without much change.

Pilion has been in good demand. Spot differences are rather dearer for Good and better, but cheaper for Fully Good Fair and below, which are not in request.

Brown, etc.—A fair business has been done. Spot differences are cheaper for the medium and lower grades, but somewhat dearer for the good qualities.

There are about 400 miles of good motor roads in Rajputana, while roads available for motors in all weather conditions total about 950 miles.

Considerable success is reported to have attended experiments by vine-growers in the Pleven and Roussé districts of Bulgaria in the production of raisins from their grapes, and expectations are entertained that this will soon become an established industry in the country.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Constitutionalism Again in Greece.

Four months after the overthrow of General Pangalos Greece enters upon the real stage of liquidating the dictatorship and of a return to normal constitutionalism. During the interval General Kondylis has carried on the administration of the country in a way that does him credit. He insisted that his sole aim was to bring Greece back to parliamentary government, but he would not relax his hold on the reins of power until he was satisfied that a Ministry with the promise of a normal amount of stability—no exacting standard exists in Greece—was ready to take over from him. Like many other prominent men in the country, he found that he had made a great mistake in his reading of the attitude of the electorate. The general election gave a majority in favour of the republic—it might be more correct to say that it registered a vote against a constitutional change at this period—but it showed that no political party commended itself to any overwhelming section of the community. In these circumstances a Coalition Government was the only solution. It has taken the Greek politicians four weeks to make the arrangements that were alike dictated by common sense and urged upon them by the almost unanimous voice of the Greek people as a whole. In the negotiations to this end General Kondylis appears to have played little or no part. Strictly in keeping with his undertaking to eschew politics, he has left the politicians to compose their own differences, and he has carried on his colourless task of looking after the routine administration of the country with a self-abnegation that must always be conspicuous in Greek annals. It is to be hoped that Greece will appreciate General Kondylis's studied moderation and singleness of purpose.

The New Greek Government.

Once again M. Alexander Zaimis, Greece's safe man, has stepped into the political breach for the good of the country. He held the post of Prime Minister for the first time nearly thirty years ago, just after the disastrous Greco-Turkish War of 1897. Even in those days he was regarded as a welcome relief to the forceful and dangerous politicians who held a more prominent place on the Greek stage. He has always been too reserved, too silent a man to collect any large following around him; but his capacity has been recognised by his countrymen and his judgment respected. As Prime Minister of a Coalition Cabinet to-day M. Zaimis can be trusted to exercise a moderating influence in the government of the country and will probably be able to hold the rival politicians together for a longer period than anyone else could hope to do. He will be assisted by the recognition by the party leaders of the fact that not one of them at present has a chance of holding the Prime Ministership for any length of time; another element of stability for the Coalition is the general consensus of opinion in the country that a fresh appeal to the electorate is to be avoided for as long as possible. Portfolios in the new Cabinet have been given to M. Kaphandaris, of the Republican Liberal Union, M. Tsaldaris, leader of the Monarchical Popular Party, General Metaxas of the Free Opinion Party, also a monarchist, to M. Papanastasiou, and M. Michalakopoulos, whose appointment as Minister for Foreign Affairs will be well received abroad, while in Greece itself there is the knowledge that the country would probably have fared much better, if his Premiership had not been abruptly terminated by General Pangalos's *coup d'état*. M. Zaimis will have a difficult team to guide. Whatever the future has in store for Greece his own reputation is not likely to suffer, but an early break-up of the Coalition might well make the Greek people despair of the patriotism of their political leaders.

King Ferdinand's Appeal.

When publicity can be a synonym for honesty there can be little doubt that it is ever the best policy. For weeks the newspaper world has circulated reports of the health of King Ferdinand of Roumania which have shown little variation, in the despairing terms in which they were couched, beyond discrepancies as to the actual day of

Digitized by Google

last week when the vacancy on the Roumanian throne was to be expected. The most confident pessimism was reserved for the paper that dispatched a special correspondent to Bucharest, in order that the wildest rumours might be duly enshrined in headlines. If report has been so busy abroad, it is to be inferred that it has raged even more unrestrainedly in Roumania itself, stirring up muddy waters that ought never to have been disturbed. In spite of the manifest delicacy of the matter it would have been better if the Roumanian authorities could have taken the public into their confidence and so cut the ground from under the feet of the sensation-mongers. It has been left to King Ferdinand himself to approach his people direct in, perhaps, one of the most poignant letters ever penned by a Sovereign. He has been deeply touched, he writes, by the interest and affection which everyone has shown towards him on account of his health, and he continues: "At the same time it is with profound regret that I see that certain people have profited by the circumstance to bring into discussion the principles forming the dynastic foundation of constitutional monarchies which do not permit of the fate of the Crown being abandoned at the changeable will of anyone." The allusion is made more precise when the King goes on to point out that he has always kept personal feeling in the background when it was necessary for the sake of the country to sacrifice personal bonds, "as was necessary when I as King put a stop to the consequences of the errors and indecisions of a beloved son." Finally his Majesty appeals to all good and loyal Roumanians and (significantly) to "all my faithful and devoted advisers" to rally all the forces of the nation to form a rampart about the Throne, "in order to be in a position to enforce respect for my decisions and my acts, for such decisions and acts have been taken and realized in conformity with the laws and the supreme and exclusive interests of the Monarchy and of the State."

The Position in Roumania.

King Ferdinand's ill-health remains, although, happily, he has experienced some relief, but his letter should at least put an end to the intrigues that have been set on foot in connexion with the succession. It is to the credit of those of the Roumanian people whose loyalty to the Dynasty prompts them to forgive the indiscretions of any member of it, but two cogent arguments support the course that the King urges, apart from his own personal appeal: one is Prince Carol's own instinct, and the other is the certainty that no country can hope to prosper if a serious moral barrier should alienate a considerable section of the people from its ruler. Whether it is necessary that, in order to give effect to the King's wish, the Government of General Averescu should resign and be replaced by a Coalition Cabinet is a matter for the Roumanians themselves to decide. The need is not obvious to others. King Ferdinand asks, in effect, that there should be no further talk of any steps, direct or indirect, aimed at an ultimate reversal of the decision which ruled Prince Carol out of the succession and made Prince Michael the Heir Apparent. Popular opinion can quite well rally round the Throne without crowding all its representatives into the Ministry. General Averescu's Government has not yet been in office for nine months, but it has to its credit an improved exchange and a notable improvement in Roumania's financial credit abroad. In such circumstances it might be thought that the Roumanian public would wish the Government to have a longer term of office, in order that its policy may be given an adequate trial.

Yugoslavia and Italy.

It is to be hoped that all the advice that may be offered to the Yugoslav Government at a critical moment, when public opinion is inclined to be agitated by the conclusion of the Italo-Albanian Treaty, will not be on the lines adopted by the Belgrade "diplomatist of a foreign nation especially friendly to Yugoslavia," which is quoted in the *Vreme*. According to this authority, "the Tirana Treaty means that Italy is stepping on Balkan soil . . . it infringes the principle of 'the Balkans for the Balkan peoples' and brings Italy on to the River Drin." For reasons that are set out elsewhere in this issue it may be doubted whether the Treaty, as worded, entails any of these things in any new degree. In the economic sphere Italy is already firmly established in Albania, and it may be doubted whether Albanian public opinion will tolerate any overt attempt on Italy's part to obtain a political footing. In the event of trouble in the Balkans the political significance of Italy's treaties might be subjected to a severe test; but so long as peace is maintained among the Balkan States there would seem to be little in any of the treaties to restrict the freedom of action of any of them. The principle of the Balkans for the Balkan peoples cannot become a serious factor in world politics until it is formally embodied in agreements that link the various States to one another in a political and economic federation, however loosely knit together it may be. So long as national bitterness or jealousy is allowed to colour Balkan relations Italy is likely to make the most of the door left so conveniently open for her.

THE AMIR ABDULLAH'S VISIT TO CYPRUS.

We have received the following communication from the ex-King of the Hijaz, dated Nicosia, November 23:—

"H.M. Hussain Ibn Ali, ex-King of the Hijaz, is surprised that false rumours have been spread in the Press concerning the visit of his son, the Amir Abdullah, to Cyprus. His Highness, Amir Abdullah of Transjordan, visited Cyprus with the sole purpose of paying a visit to his father, the ex-King of the Hijaz, and has returned to his capital, Amman, after an eight days' sojourn, in order to continue his royal post of the Amirate of Transjordan."

The Turkish Ministerial party has selected its candidates for the ten by-elections which will be held in different parts of the country to fill the vacancies in the Grand National Assembly caused by the recent executions in Smyrna and Angora and by resignation.

Sir Samuel Hoare, Secretary of State for Air, and Lady Maud Hoare are expected to arrive at Sollum on December 31 for the opening of the Cairo-Karachi aeroplane service. After spending a night at Alexandria, they will fly from Aboukir on New Year's Day to Baghdad, via Ziza.

THURSDAY, DECEMBER 9, 1926.

ALBANIA AND ITALY.

If the time be of his own selection, Ahmed Bey Zogu has made a bold move in signing a treaty of friendship and arbitration with Italy while engaged in the suppression of a revolt in northern Albania. Those who were tempted to see in the rising of the four Mirdite tribes Italian interference in Albanian affairs, if only because the rebels were understood to be in touch with Zara, the Italian enclave on the Dalmatian coast, find themselves forced to admit that the Albanian Prime Minister does not appear to share their view. Only a very Macchiavellian policy would deliberately foster a revolt in another country as an inducement to that country to conclude a pact of friendship. If, therefore, there was any Italian backing of the Albanian rising, it must necessarily have been of an unofficial character. The restricted area of the fighting is not incompatible with a purely local incident, and confident assertions implicating this or that neighbour may rest on no surer foundation than the knowledge that Albanian affairs are a constant preoccupation both of Rome and of Belgrade. If it were known in one of the two countries that negotiations were in progress for a treaty between the other country and Albania, there would be a strong temptation to spread abroad reports connecting the rival with the Albanian rising. In a matter of this kind, however, no one is called upon to be more pro-Albanian that the Albanians. It might be better if Ahmed Bey Zogu could point to a strong body of popular opinion supporting his policy, whether foreign or domestic, but in the stage of constitutional development in which Albania finds herself, this is perhaps too much to expect. The Prime Minister has it to his credit that he has established law and order in the country, and that when an insurrection has broken out, he has been able to deal with it promptly and successfully. For the rest, it must be to Albania's interests to have treaties of friendship with her powerful neighbours, provided that she can obtain them without the sacrifice of her political and economic independence. Those of his countrymen who have hitherto been inclined to challenge Ahmed Bey Zogu's policy on the ground that it has lent itself to undue economic penetration of Albania on Italy's part, will scrutinize very closely the treaty signed on November 27 at Tirana for fear that it may be found to place their country to a similar extent in political subservience to Italy.

From the published terms of the Italo-Albanian Treaty it is evident that the significance of its provisions depends on the spirit in which they are interpreted. The recognition by both Governments that all disturbances directed against the political, juridical and territorial *status quo* of Albania are contrary to their mutual political interests, and the undertaking mutually to lend their support and cordial co-operation to safeguard those interests, would, if Italy were agreeable, enable the Albanian Government to call for Italian support in the suppression of any challenge to Ahmed Zogu's authority, or these terms might even be held in Italy to justify an armed occupation of Durazzo or any other Albanian port in order adequately to protect Albania. On the other hand, it will not, presumably, prevent Italy, if she so wills, from continuing to harbour on Italian soil Albanian political refugees, who are known to be scheming to upset the régime to which the Italian Government promises its support and co-operation. Albania, however, may reasonably claim that, if there is any honesty in international relations, the Treaty does effectually prevent Italy from countenancing any attempt to challenge the authority of the present Government. Up to this point it is a contribution to the general peace of Europe, and in the face of the extent to which Italian economic interests have already established a hold in Albania it would be superfluous to read into the Treaty any additional encroachment for the time being by Italy upon Albania.

That the Italo-Albanian Treaty should be badly received in Yugoslavia need cause no surprise. If the Yugoslav Government were not officially informed of the negotiations, the degree of "friendship" that the Pact of January 27, 1924, between the two Kingdoms emphasised cannot be very marked. For some time past there has been uneasiness in Belgrade lest the real significance of Italy's activities in the Balkans should lie in a policy of isolating Yugoslavia and so undermining her legitimate influence in the Peninsula. The Italian Government had it in its power to allay all suspicion by taking the Yugoslav Government into its confidence in regard to its relations with Albania. By springing the *fait accompli* on its neighbours it will have helped to confirm the worst fears entertained by the Yugoslavs. Such action may constitute a triumph for Italian diplomacy, but cannot be regarded as an earnest of pacific intentions. The incident recalls the circumstances in which the Pact between Italy and Yugoslavia was announced to the world. The moment chosen was at a time when France and Czecho-Slovakia were anxious to see Yugoslavia enter into an agreement with the former, and the Pact with Italy was regarded as being intended to be a rebuff to both. Italy will, no doubt, be able to point out that there is nothing in her treaty with Albania contrary to the letter of her joint undertaking with Yugoslavia to respect the integrity of Albanian territory; but her action cannot fail to increase the suspicion with which she is regarded by certain sections of the Yugoslav people. In this respect she has done a great disservice to the Yugoslav Government of the day, which is experiencing considerable difficulty in smoothing down Croatian and Slovenian susceptibilities in regard to Italy. Only a few days before the signature of the Albanian treaty there had been a bitter attack in the Skupshtina on Italy, and it required all the tact and authority of Dr. Nintchitch, who has since felt obliged to resign the post of Minister of Foreign Affairs, to persuade the Chamber to pass to the order of the day. In such circumstances the attempt on Italy's part to score a diplomatic triumph over Yugoslavia is not a contribution to the peace and harmony of Europe. A treaty which ostensibly commits a foreign Power to support a particular régime in another country, even if at a future date the people of the latter desired a change of régime, would seem to be a new element in international relations. If such an agreement had been made with General Pangalos instead of with Ahmed Bey Zogu, Greece might have been committed to a war against Italy before she could free herself from the dictatorship. In the case of Albania it may well be that the retention of power in a strong man's hands for five years, even with the inconvenience of Italian support, will not be a bad thing for the country. Treaties, like dictatorships, ultimately lapse, and for this reason it does not seem worth while to worry overmuch about either. With both, while the good points predominate they are likely to stand and may be welcomed; when they become merely encumbrances, they are inevitably encompassing their own undoing.

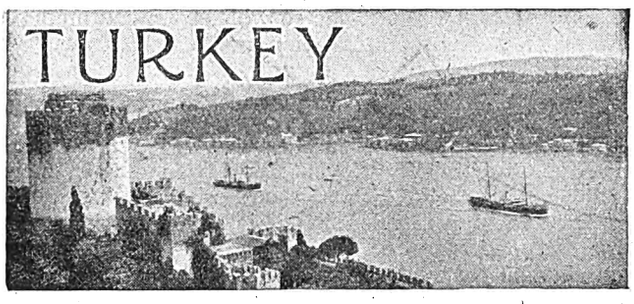
The Near and Middle East*

From Our Own Correspondents.



Constantinople, November 30.

Anglo-Turkish Relations.

Sir George Clerk appears to have made an extremely good impression at Angora, which he visited for the purpose of presenting his Letters of Credence to Mustapha Kemal Pasha. Publications which, if not exactly hostile, have hitherto displayed only a tolerant attitude in discussing Anglo-Turkish relations have, since the new Ambassador's visit to the capital, suddenly blossomed forth into enthusiastic predictions of the establishment of a reciprocal and cordial friendship between the two countries. Furthermore, the writer of the foremost article in this strain is Agha Oglou Ahmed Bey who, during Fethi Bey's term of office as President of the Council, was so extremely Anglophobe. His sudden veering round is, according to his own declarations, to be attributed to the fact that Great Britain is now governed by the Conservative Party, which, he holds, has ever been more perspicacious about the value of Turkey, and whose policy of moderation has made possible the settlement of all questions left outstanding after the signature of the Lausanne Treaty. Agha Oglou Ahmed Bey contends that all that is necessary to assure the continued strengthening of international relations with Turkey is that all potential friends shall thoroughly understand what Turkey actually is and to what she aspires. Turkey, he states, resolved to enter the family of civilised nations, is modifying the bases of her existence and devoting all her energy to qualify for this position, but meanwhile she desires the consideration and benefits afforded all civilised nations. "Great Britain possesses a considerable interest in the Orient and it is as much to her advantage as to that of Turkey, that peace shall be maintained there. Moreover England and Turkey, mutually understanding and appreciating each other, can constitute the primary factors for ensuring peace amongst the people of the Orient."

While it has lately become increasingly evident in general circles that a modification of the post-War hostility has been taking place, these publications of the last few days are the first indication for some considerable time that the real wish for better relations with Great Britain is shared officially at Angora. Despite the frequent exchange of *billets doux* between Turkey and Russia the manifestations mentioned above leave little doubt concerning Turkey's preference.

Broussa.

It is reported that following on the desire expressed by the Ghazi that Broussa's springs should be commercially exploited and the town modernised as it deserves, the ex-Khedive, Abbas Hilmi Pasha, has decided to give his financial support and to form a company for the purpose of building modern baths and instituting all the comforts which might make Broussa into an up-to-date spa.

With these improvements in view it is to be hoped that ample measures will immediately be taken to prevent the repetition of such a disaster as that suffered by Broussa last Friday. Just before midnight a terrible fire broke out and completely destroyed the whole of the Touz-Bazar quarter, which comprised some 134 shops and many houses. Lack of water and inadequate fire-fighting appliances and services were responsible for the spreading of the fire, and only after fourteen buildings had been demolished to cause a break did the fire abate. The total damage is estimated at £T2,000,000 of which only £T80,000 worth is covered by insurance. The danger of extensive fires is ever present in nearly every town in Turkey, and the municipal authorities of these places would be well advised to follow the example of their Constantinople contemporaries. The former capital certainly possesses efficient fire brigades.

Constantinople Tramways.

The *Yeni Sess* has started an energetic campaign against the Tramway Company of Constantinople, and this paper appears to be receiving the full support of certain official departments. The cause of complaint is the attitude of complete indifference with which the Company treats the public, and the utter lack of consideration for the comfort and convenience of those upon whom the Company's existence depends. Constantinople trams are packed more densely than in any other city in the world. Without the slightest exaggeration these trams carry, during the busy hours, twice the number of people for which they are licensed; consequently passengers occasionally overflow into the street—often with regrettable results. In view of the fact that one tram has been proved capable of executing the work of two, the Tramway Company apparently see no reason for reducing their profits by buying and running extra trams. The time now appears to have come, however, when the public have grown tired of being the object of a practical joke by this Company, and it is now being urged that at the end of the concessionary period this public service shall be taken over and operated by the Government.

GREECE.

Athens, November 24.

The Result of the Elections.

The fear expressed in the last letter from Athens that few people would believe the election to be straight, has proved unfounded. No suggestion has been made by any party that the voting was not free. A very large proportion of the electorate voted, and perfect order prevailed. The results are not really decisive, and it is felt

Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

Digitized by Google

that a royalist majority might have been obtained under the old system of voting. Such a result would, however, have been a calamity. The country would have been brought up against the constitutional question too abruptly. As it is, the question remains in the background. The immediate outlook is, none the less, discouraging. A long vista of pourparlers and parliamentary manœuvring opens out, which must end, at the best, in a Coalition Government (a cumbrous and unworkable expedient) and, at the worst, in a fresh general election, or a further instalment of military control. The new Parliament will be formally opened on November 26, and will then adjourn till December 6. Three pressing questions demand settlement: (1) The completion of the installation of the refugees, for which the fund available from the last loan will last until May of next year. (2) The balancing of the Budget, and stabilisation of the drachma. (3) The adjustment of the relations between Yugoslavia and Greece.

General Pangalos.

One of the new Parliament's first duties will be to try the late Dictator, General Pangalos. The most serious charge against him is that of hanging two men under an Act which was made retrospective. As his whole position was unconstitutional, it is hard to see how particular acts can be selected for condemnation as illegal. Some interesting legal points will be raised, and the trial will certainly absorb the closest interest, to the exclusion of everything else. There is a good deal of sympathy with the late Dictator, who, it is felt, was inspired by sincere patriotism, and who, though his methods were tyrannical and towards the end of his régime increasingly so, did a great deal to restore the moral of the country.

General News.

The effects of the prolonged drought are likely to be serious. The usual winter sowings cannot be made, the olive harvest is very poor. The price of olives and olive oil—the country's staple food—will be ruinously high. Such a drought has not occurred for sixty years.

A committee has been formed to provide for the celebration of the centenary of Fabrier's relief of the Acropolis on the night of December 12, 1826. Though Fabrier's record in Greece was largely one of failure, that particular incident was planned and carried out in a masterly way. If the sequel was disappointng, he was not to blame, and he is rightly remembered for his disinterested devotion to the Greek cause.

The centenary of the death of another Philhellene, who contributed even more than Fabrier, and probably more than any other foreigner to the success of the Greek arms, but whose services, owing to his unassuming personality, have not perhaps received due recognition, occurs the year after next. "No man," says Finlay, "ever served a foreign cause more disinterestedly." Unlike Fabrier, Captain Frank Hastings succeeded in practically everything he undertook. His career in Greece reads like a romance. He was mortally wounded in an attack on Anatoliko on May 25, 1828, and died on board the Karteria, which he had commanded with so much distinction. It is not probable that among the heroes, whose deaths or achievements in the War of Independence Greece is so gratefully commemorating about this time, the name of this typical English sailor will be forgotten.

HIJAZ.

Jiddah, November 19.

The Amir Faisal's Return.

The Amir Faisal and his suite, having after the completion of their European visit travelled from Marseilles to Port Sudan by the P. and O. s.s. Macedonia, were conveyed from the latter port to Jiddah on board H.M.S. Cornflower and arrived here on November 7. On the 10th they proceeded, again on the Cornflower, to Rabigh *en route* to Madina, where the Amir and his advisers will report to the King on the results of their two months' wanderings. A public banquet was organised on November 8 by the authorities at Jiddah in celebration of the Amir's homecoming. This was attended by all the diplomatic and consular officers of the various Powers, and it was noticeable that precedence was accorded to the Turkish representative, Sulaiman Shaukat, in virtue of his rank as a Minister Plenipotentiary. Felicitous speeches were made in harmony with the occasion and the acting Foreign Minister, Yusuf Yasin, in the absence through indisposition of Dr. Abdullah Damluji, conveyed the thanks of the Hijaz Government to the Powers who had accorded their hospitality to the young Prince as well as to those who had extended to him invitations which for various reasons he had not been able to accept.

The State of Jiddah.

Jiddah changes but slowly and unwillingly. The Tomb of Eve has lost its cupola but is otherwise intact, though no longer the object of visitation by the ladies of Jiddah on Thursday afternoons as it used to be. In fact, the ladies of Jiddah, in deference to the new and stricter dispensation, appear to have retired into greater seclusion than was customary under the Sharifian sway. Another outward change is the new sea-water condenser, which rears a second chimney in companionship with that of its obsolescent but still active predecessor dating from the pre-War régime. Water is now comparatively abundant and costs but a penny a tin—during the siege it rose as high as sixpence. The summer drought still prevails and the raineloud, which have been wandering round this region, have so far given us but meagre showers. Motor cars have established themselves as a definite part of Jiddah life, adding to the noise and dust of the streets, but progress in this direction has not been as rapid as one might reasonably have anticipated last March. This is perhaps in part due to the failure of the Motor-Transport Company, which was accorded an exclusive concession for the transport of pilgrims. The Company appears to have pinned its faith to Ford buses, which are not eminently suitable for the sandy tracks between here and Mecca and are now for the most part lined up in derelict rows in a secluded part of the town. The original concession was cancelled by the Government in July and the motor transport business is open to all comers—the resulting competitition should make for progress.

Question of the Pilgrimage.

The past pilgrim season is written off as a poor one from the point of view of the Jiddah merchants and shopkeepers, depending as they do on the overseas pilgrims, whose numbers are generally given for the season as 54,000. The Egyptian pilgrimage was exceptionally large, and that from the Dutch East Indies well below the average mark. Prospects for the next pilgrimage are

Digitized by Google

already under active discussion, and the first pilgrims—from Java—will arrive in December. It is announced that some 25,000 pilgrims from the East Indies have already been booked—a good start. But the Indian prospects are too vague to be calculated, and it is not easy to assess the probable effect of the strange campaign which the Ali brothers appear to be conducting against Ibn Saoud's régime. By that campaign they are scarcely contributing to the strength of Islam in the world's counsels, and, it is difficult to believe that they seriously expect the Wahhabi King to relinquish the position he has won by the sword to the tender mercies of the Republic which they advocate. The best justification of Ibn Saoud's régime in the Hijaz is the fact that the roads are safe for pilgrims as they have never been before. Be that as it may, a good pilgrimage in 1927 will do much to restore economic prosperity in a country which has suffered much of recent years.

Turkey and the Hijaz.

The King is at Madina, and may pay a visit to Riyadh and other parts of his vast kingdom before returning here. It is improbable that he will be here inside of six weeks—perhaps in time to celebrate the first anniversary of his proclamation as King. The Turkish Republic must now be added to the list of Powers which have formally recognised that title, Italy and Egypt alone of the Powers represented here by agents or Consuls having so far failed to do so. The Counsellor to the Turkish Legation is Mahmud Nadim Pasha, formerly Commander-in-Chief in the Yaman during the War and subsequently Wali of the same province—a man of mark and of pleasant and affable temperament. In fact, the strength and titular rank of the Turkish representation here augurs a desire on the part of Mustapha Kamal to maintain close relations with the new Arabia.

Italy and the Red Sea.

The Italian Treaty with the Yaman has aroused much interest here. In it the Imam Yahya is specifically recognised for the first time as King of the Yaman and Amir al Muminin, while other clauses give Italy a practical monopoly for the supply of technical personnel, equipment and supplies to her new *protégé*. The Treaty is unquestionably a diplomatic triumph for Italian policy, particularly in view of the failure of the Clayton mission to negotiate a treaty earlier in the year and of the fact that Italy now has a firm footing on both sides of the Red Sea near its southern end. In these circumstances recent British activities in the Farisan Islands, where some sort of negotiations for an oil concession have been going on with the Idrisi, may well be in the nature of a strategic reply to Italian action in the Yaman. The facts about this oil concession are still a little vague, and the present Idrisi's right to dispose of such a valuable asset is even more shadowy, for it will be remembered that he was appointed to the Amirate of Asir in supersession of his nephew Ali only last year by Ibn Saoud. Asir territory, including the Farisan Islands, has since then been regarded as forming part of Ibn Saoud's kingdom, but, the position being so vague, it may be that the British Government have thought it worth while staking out a claim in this area as it did in the Maan-Aqaba region a year ago.

The Amir Abdullah.

From Transjordan it is reported that ex-King Ali has arrived from Iraq to relieve or supersede the Amir Abdullah, who is said to be going to Cyprus, accompanied by Fuad al Khatib, formerly Foreign Secretary of the Hashimite régime in the Hijaz, to visit his father.

Cairo, November 27.

The Political Atmosphere.

There are signs of a slight *détente* in the air. The visits paid to the High Commissioner first by Adly Pasha and Sarwat Pasha and later by Zaghloul Pasha gave rise to all manner of rumours, and in political circles an atmosphere of gloom made itself apparent—this seemed to give confirmation to these rumours. But during the past few days Ministers have displayed a much more cheerful demeanour, and the effect has been instantaneous on the public, which watches its leaders very closely and takes its tone and its mood from them. Nevertheless the horizon is by no means clear, and it would be foolish to think that the difficulties which were anticipated have been entirely eliminated. For one thing there are several questions of importance to British and foreign interests which must be settled in the very near future, some on which the Government may be called upon to take action (which although really for the good of the country may be distasteful to them) and others on which Parliament and the Government adopted an attitude scarcely calculated to encourage confidence. The fact that the disposition of the political leaders, of which the Speech from the Throne, in what it both said and left unsaid, was such an admirable expression, is entirely friendly to Great Britain, encourages the hope that the British view on these matters will be accepted. But the Egyptian political situation has so many side-issues which create unexpected developments that it would be unwise to be ultra-optimistic.

The Wafd-Ittihad War.

Meanwhile the battle between Wafd and Ittihad continues to rage furiously, and a symptom of the bitter feeling that exists between these two elements has been vouchsafed by the decision taken by Zaghloul Pasha, in his capacity as President of the Chamber of Deputies, to exclude the representative of the Ittihad organ from the Press Gallery—an action which is contrary to the provision in the Constitution establishing liberty of expression of opinion and is merely calculated to aggravate the situation, since it would seem to show that the gibes and barbs of the *Ittihad* have gone home. There is a distinct impression amongst those who have been closely watching developments that, while once again every effort will be made to avoid any conflict with the British authorities, the present session will see renewed antagonism to the Palace, with quite possibly a revival of the constitutional issue with which the second session of the 1924 Parliament was opened.

The Chamber.

The opening meetings of the Chamber have revealed a more businesslike attitude, which has been translated into a reduction of the size of the various committees. At the last session some of them had as many as thirty members and many of the deputies served on several, with the result that business was often very much delayed. Now

Digitized by Google

no commission has more than fifteen members, and no member is sitting on more than one commission. The constitution of three of the commissions aroused some amusing comments outside. There are: the Commissions on Education, on Foreign Affairs and on War, with the latter of which it is interesting to note that the Sudan Commission has been merged. The Education Commission includes a deputy who, in spite of many years' study at the School of Law, has never managed to pass any examination. His failure year in and year out became a by-word and his campaign in the Press in favour of supplementary examinations was always received with amused contempt.

The Foreign Affairs Commission has as president a bedou, who except for certain visits to Paris, where he picked up a smattering of French, has little knowledge of the world outside Egypt and still less of public affairs. His selection to preside over a commission dealing with such a delicate and intricate subject is ludicrous. As regards the War Commission, it includes a bedou deputy whose interventions in the debates owing to their stupidity never fail to arouse hilarity. His sole qualification seems to be that on the outbreak of the War, fearing that the immunity in regard to military service enjoyed by the bedouin might be abolished, he took refuge with the Sennussi at Jerabub.

Nashat Pasha.

The diplomatic movement consequent on the decision suppressing certain diplomatic posts taken by the Chamber last session has not yet been made. It is long overdue, and the reason for the delay is the difficulty in which the Cabinet find themselves over Nashat Pasha. His post at Madrid was amongst those abolished, and the proposal is to send him to Teheran. Thither Nashat declines to go. He wants Constantinople—which is also vacant—and in his attitude he is receiving support from very high quarters. If he does not get Constantinople he will resign and return to Egypt. The prospect of the presence of Nashat Pasha once again in the political arena, even though he may now have no official position, is distasteful, and not unnaturally so, to the Wafd and the Liberals, who rejoiced when last winter he was moved from the Palace to Spain. But unless they decide to give way on the question of appointment they will have to face what will merely be the result of the short-sighted decision they took last summer.

Liubliana, November 27.

Yugoslavs in Italy.

It is unfortunate, although an intrinsically logical and practically inevitable phenomenon, that each bout between the Italian Opposition and the ruling Fascist Party should at once provoke friction between Italians and Italy's Yugoslav subjects in the new provinces, and so place more or less of a strain upon the relations between Italian and Yugoslav public opinion. Fascism appears to treat all its opponents alike and visits the opposition encountered in one quarter with equal ruthlessness upon all the rest without exception and without distinction, and, therefore, also upon the Yugoslavs. It is perfectly intelligible, however, that every excess perpetrated upon the Yugoslav minority in Italy should make bad blood in Yugoslavia.

The deplorable sequence of events just described was again repeated on the occasion of the fourth attempt upon Signor Mussolini, which took place on November 1 at Bologna. After the failure of the attempt upon the Duce the Fascists fell upon all and sundry who were not of their party, even perfectly peaceful persons and parties who had never lifted a finger against Fascism or Fascists. The Fascist organisations indulged in a wild orgy of reprisals against non-Fascist organisations and institutions, while the Fascist Cabinet passed new laws and decrees aimed at all national institutions belonging to non-Fascist parties, thus legalising the draconic suppression of all elements hostile, or deemed hostile, to the all-powerful Fascist Party.

Some of these ministerial decrees are frankly designed not to keep a reasonable opposition within bounds, but to destroy it altogether. They authorise the disbanding of all societies, associations, and organisations whose activities are not in favour of Fascism. They strike not only at political bodies, but at educational and learned societies, provided these are not constituted under the ægis of Fascism. This category includes all surviving Yugoslav organisations in Venezia, Giulia, Trieste, and Istria, even such as have never meddled with political questions. If these and similar decrees are really enforced, it will mean death to all intellectual and cultural life for the Yugoslav minority in Italy. So it is not in the least surprising that public opinion in Yugoslavia is greatly disturbed.

The Fascists took action at once. On November 4 they dealt with Gorizia, the city which is the headquarters of the Slovenes in the Yugoslav minority in Italy. In the forenoon the Fascists celebrated the anniversary of the disintegration of the Austrian army on the Piave; in the afternoon and evening they sacked the homes of Slovene culture. They broke into the reading-room of the Associated Educational Societies, smashed furniture and pictures and destroyed the newspapers. In the evening they went the round of the rest of the Slovene educational institutions, printing presses, and so forth, in turn, where they broke up the furniture and fittings, threw them into the street or burned them. They then took possession of the devastated premises and proclaimed them headquarters of Fascist organisations.

Yugoslav Opinion Stirred.

Of course these outrages have profoundly stirred public opinion throughout Yugoslavia. It goes without saying that the authorities everywhere took prompt and effective measures to prevent anything in the nature of public indignation meetings, let alone attempts at reprisals, to express the depth of feeling roused over here by the Fascist excesses. (In Liubliana the main street and promenade were again periodically closed against all and sundry by a strong cordon of police set to guard the whole block which contains the Italian Consulate.) All the same, many districts witnessed spontaneous demonstrations against Fascism.

In the Skupshtina a number of questions regarding the Fascist reign of terror over the Yugoslav minority were put up by the opposition to the Minister for Foreign Affairs. Public excitement reached its height at the news of the arrest of several notable Yugoslavs in Italy, especially when it was reported that even Dr. Wilfan, leader of the Italian Slovenes, had been arrested in Rome. Dr. Wilfan is a deputy, and it will be remembered that he was a leading personage at the Congresses of European Minorities—in fact, he acted as President at both Minority Congresses. Fortunately, the news of Dr. Wilfan's release followed closely upon that of his arrest.

It is not the first time that Dr. Nintchitch has been called upon to answer questions of this kind; nor is it the first time that the Yugoslav minority has been attacked by the Fascists. As a rule, Dr. Nintchitch has replied to such questions quite briefly with statements to the effect that a reply would be tantamount to interference with Italy's internal affairs. This time, Dr. Nintchitch did not dismiss the question in these terms, but said in his reply that he could not admit it—i.e., that he could not permit a discussion of the subject of the question, since such discussion would reflect detrimentally upon Italo-Yugoslav relations. This reply has been accorded all the more attention as Dr. Nintchitch is notoriously considered the most conciliatory of diplomats. In fact, one often hears him charged with opportunism and an over-inclination to yield to foreign pressure, especially in regard to Italy. The Government majority, while showing by its demeanour that it was in sympathy with the tone of the Opposition speeches in condemnation of the Italian terror, nevertheless declined the question and so supported the Foreign Minister's point of view. This occasion afforded an opportunity of realising that it is only an extreme effort at self-control which enabled Yugoslavia's elected representatives to restrain their indignation over Italian barbarism as practised towards her Yugoslav minority.

A Slovene Mountaineer.

Yugoslav mountaineering and sporting circles have suffered a sad loss this month by the death on November 4 of M. Aloys de Reggi, aged 20, of Liubliana. M. de Reggi was one of the best long-distance runners in the kingdom as well, and was generally accounted the boldest and most expert of native mountaineers of the younger generation. But beyond this, he was a sportsman in the true and precious sense of the word, and as such already a personality in spite of his youth. M. de Reggi lost his life while climbing for practice on the rocks of the Grmada (Beacon), not far from Liubliana. The rock, which was probably in bad condition owing to the prolonged wet weather, gave way beneath him; he fell some 40 metres and was dead within a few seconds. He was a very promising student of natural science at Liubliana University.

Study of English.

"The Yugoslav Society for the Study of English" in Liubliana has moved to Shellenburgova ulice 7, where very suitable premises have been secured. The Society has had a very busy year, and it is a great convenience to have the Library in the principal street of Liubliana.

Arrangements for the experimental air mail service between Khartoum and Kisumu and an air survey of the route are approaching completion. One pilot left on December 3 for Khartoum. One of the seaplanes to be used, a D.H.50 biplane (420 horse-power Bristol Jupiter engine), fitted with metal floats, is expected to arrive at Port Sudan on December 17.

THE GREEK CABINET.

M. Alexander Zaïmis, on December 4, submitted the following list of the new Coalition Cabinet to Admiral Konduriotis, the President of the Republic:—*M. Zaïmis, Prime Minister; *M. Kaphandaris, Finance; *M. Michalakopoulos, Foreign Affairs; General Metaxas, Communications; M. Tsaldaris, Interior; *M. Papanastassiou, Agriculture; General Mazarakis, War; M. Alexander Kanaris, Marine; M. Constantine Angelopoulos, Justice; M. Athanasios Argyros, Education; M. George Merkouris, National Economy; M. Constantine Kirkos, Public Assistance; *Former Prime Ministers.

The Ministries of National Economy and Public Assistance, which were abolished by General Pangalos in January, have been reconstituted.

The Greco-Turk Conventions arising out of the Treaty of Lausanne were signed last week.

During October 641 immigrants, of whom 598 were Jews, entered Palestine, and 1,302 persons, of whom 1,061 were Jews, emigrated from the country.

A number of Turkish newspapers are suggesting, says a Central News message, that the City of Constantinople should be renamed Kemal as a mark of appreciation of the services of Mustapha Kemal Pasha, the Turkish President.

The strength of the Royal Air Force in Iraq is to be reduced from eight squadrons to seven. No. 1 Squadron, which at present is equipped with the single-seater fighter "Snipe" aircraft, ceased to be part of the R.A.F. command in Iraq as from November 1, but it will be reformed, probably early in the New Year, as a single-seater fighter squadron of the Home Defence Force under the command of Air Vice-Marshal Brooke-Popham.

Dr. W. S. Patton, who has been appointed by Liverpool University to the Dutton Memorial Chair of Entomology as from January 1, 1923, was Entomologist to the Mesopotamian Expeditionary Force during the War. He has acted as Director of the King Institute of Preventive Medicine, Madras, and as Director of the Pasteur Institute of Southern India. Recently he has been engaged in entomological investigations in China.

The Church of the Dormition, or "The Falling Asleep of the Blessed Virgin," has now been granted the status of an independent Benedictine Abbey, subject to the Pope alone, says *The Times* Jerusalem correspondent. Previously this church, a familiar structure at the south-west corner of the walled City, had been a priory, dependent on the Abbey of St. Joseph at Koesfeld, near Münster, in Westphalia. The present change restores to the Benedictines in Palestine a status which they held there in the Middle Ages, and only lost when the Crusaders were driven out of the country. The first Abbot of the Abbey of the Dormition is Dom Maurus Kaufmann.

PERSONAL AND GENERAL

TO-DAY

December 9, 1926 (New Style).
November 26, 1926 (Old Style).
Jomada II. 3, 1345 A.H., of the Muslim Calendar.
Tebet 4, 5687 of the Jewish Calendar.

Sir Herbert Dering arrived last week at Cannes.

The Duke of Atholl left 84, Eaton Place last week for Scotland.

The Prince of Wales received Major Nawab Ahmad Nawaz Khan of Dera at St. James's Palace on December 1.

Mrs. Franklin Thomasson and the Misses Thomasson left for Egypt on December 1, and will be away until the beginning of February.

The Turkish Ambassador and Mlle. Ferid left London on December 5 for the Continent. They will be away for several weeks.

Sir Ian Malcolm left London on November 30 for Egypt to attend the International Congress on Navigation in Cairo and to visit the Suez Canal.

The Maharaj Kunwar of Vizianagram, brother of the Maharaja of Vizianagram, arrived last week in London for a brief stay.

Air Vice-Marshal Sir Geoffrey Salmond (upon his appointment as Air Officer Commanding, Royal Air Force, India) had the honour of being received by the King at Buckingham Palace on November 30.

The King has approved of the promotion to the rank of Field-Marshal of General Sir Claud W. Jacob, G.C.B., K.C.S.I., K.C.M.G., Indian Army, in succession to the late Field-Marshal Sir Arthur A. Barrett, G.C.B., G.C.S.I., K.C.V.O.

The following apointments are announced by the War Office:

Major-General J. W. O'Dowda, C.B., C.S.I., C.M.G., to be General Officer Commanding Baluchistan District, India, in succession to Major-General Sir W. H. Anderson, K.C.B.,, appointed Quartermaster-General to the Forces (March, 1927).

Colonel C. W. Scott, C.M.G., C.B.E., D.S.O., to be Major-General in charge of Administration, Eastern Command, in succession to Major-General J. W. O'Dowda, C.B., C.S.I., C.M.G. (March, 1927).

Mrs. P. A. F. Stephenson, who since the War has held two exhibitions in London of her paintings of Palestine, is now on her way to Hongkong. On her way home, next spring, she will again visit Palestine, with the intention of painting pictures to exhibit next autumn in London.

Viscount and Viscountess Elveden, with their son, the Hon. Arthur Guinness, and their eldest daughter, the Hon. Honor Guinness, are leaving England on December 21 for India on a two months' visit to the Viceroy of India.

Dame Dora Helen Wallis Budge, of Bloomsbury Street, Bedford Square, W.C., wife of Sir Ernest Wallis Budge, for more than 30 years keeper of Egyptian and Assyrian Antiquities at the British Museum, who died on October 18, left estate of the gross value of £7,929, with net personalty £7,860.

M. Titulesco, Roumanian Minister in London, is returning from Geneva on December 15. During his absence M. G. C. Constantinesco, Secretary of the Roumanian Legation, is acting as Chargé d'Affaires.

Sir Henry Dobbs, High Commissioner for Iraq, left Beyrout on November 30 for Baghdad.

The Lady Surma, aunt of Mar Shimun, the Nestorian Patriarch, arrived in Jerusalem on December 2 as the guest of the Anglican Bishop.

Queen Marie returned to Bucharest on December 4 and was met at the station by the King, the members of the Government, and the civil and military authorities. Their Majesties drove through the city to the Palace, and were loudly cheered by large crowds.

M. Charron, the League of Nations Commissioner, and M. Sarafoff, Director of the Refugee Settlement Services, left Sofia on November 30 for Geneva, where the Bulgarian delegation will press for the removal of the restriction forbidding the settlement of refugees near the frontier.

The Maharaja and Maharanee of Vizianagram left London on December 2 by the P. and O. express to join the Ranpura at Marseilles. Lord Stavordale, the Hon. S. Sinha, Major-General the Hon. J. F. and Lady Isobel Gathorne-Hardy, the Hon. Charles Wood, the Hon. Mrs. Lane Fox, Sir Thomas Catto Bt., and Sir Ian and Lady Malcolm were also among the passengers.

Sir Laming Worthington-Evans, Secretary of State for War, in a written reply to Mr. Gibbins, says it is not proposed to make any reduction at present in the number of British troops stationed in Egypt.

In the account of the formal inauguration of the village of Athollovo that appeared in the Letter from Bulgaria last week in THE NEAR EAST AND INDIA the Duke and Duchess of Atholl were inadvertently referred to as the Marquis and Marchioness.

The Viceroy of India has decided to award annually a gold medal for competition among the undergraduate students of universities incorporated by law in British India, and a silver medal to the best candidate appearing from each of the provinces which has not secured the gold medal. The gold medal will be awarded for an essay on some practical problem of the day.

THE PRO-JERUSALEM SOCIETY.

For the occasion of the formal dissolution of the Pro-Jerusalem Society, Sir Ronald Storrs, formerly President of the Society and now Governor of Cyprus, drew up an official Memorandum in Jerusalem, dated November 24. It was addressed to the Chief Secretary. It reads:—

1. With the accomplishment of the main purposes of the Pro-Jerusalem Society it has been decided that the Society shall cease to function as such and shall distribute its various duties and properties to various bodies.

2. The Society was founded in the spring following Lord Allenby's liberation of Jerusalem. After having been summoned by the Military Governor to make a preliminary report on the arts and crafts, the archæological needs, and the sociological requirements and amenities of the City, Mr. C. R. Ashbee, M.A., Fellow of the Royal Institute of British Architects, was appointed Civic Advisor and honorary Secretary to the Society. The most important work done by Mr. Ashbee was the restoration of the Rampart Walk, the foundation of a ceramic factory, experimental work in dyeing and weaving and the re-establishment of the Hebron glass industry. Under the instructions of the Military Governor Mr. McLean, M.I.C.E., the Municipal Engineer of Alexandria, prepared the first town planning scheme for the City, the chief aim of which was the preservation of the Old City and the prevention of building immediately in front of the City Walls. Subsequently Professor Geddes prepared a report and made several sketch plans.

3. The Society held an Arts and Crafts Exhibition in the Citadel during the year 1920, since when sixteen exhibitions of painting and sculpture have been organized. A furnished studio for artists was also provided by the Society. Mr. Ashbee carried out some large and several small restorations of buildings of historic interest. The Suq al-Qattanin was completely restored and the Suq al-Attarin preserved after having been almost destroyed by the record snowfall of 1920. The work of the Society during this period is recorded in the two volumes of annals published by the Society in 1920 and 1922, of which I attach copies.

4. Mr. A. C. Holliday, B.Arch., Associate of the Royal Institute of British Architects, Member of the Town Planning Institute and Member of the Institute of Structural Engineers, succeeded Mr. Ashbee in August, 1922. The Society's archæological activities continued and many additional works were undertaken. The clearing of the Citadel courtyard was begun and in two years more than two thousand tons of Turkish barrack building and débris were removed. Other works at the Citadel included the repair of the entrance gateway, the rebuilding of the crenellated walls, the repair of the two glacis, the examination of the south tower, the excavation at the base of the tower of Phasael and the maintenance of the Citadel grounds. The Damascus Gate, Herod's Gate, and St. Stephen's Gate were repaired, besides other buildings of historic importance. More recently the Society repaired the City Wall in one hundred and fifty different places.

5. The experimental work in dyeing and weaving was wound up, but the ceramic factory was gradually put on a firm financial footing, the Government grant was withdrawn, more workers were employed, the output was increased, and Jerusalem pottery was exported to England and America, where it has permanent agencies, and to France. During the last six months over one thousand pounds worth of pottery has been sold, and inquiries have recently been received from America for an order amounting to £E10,000. The number of persons employed is thirty and the factory is fitted with mechanical flint crushing and clay mixing machinery, a good kiln and has ten rooms.

6. The Society exhibited the arts and crafts of Jerusalem at the two British Empire Exhibitions as well as the models of the Temples. Pottery and glass were sent to the Paris Exhibition of Decorative Arts.

7. During the eight years of the Society's existence stringent control has been exercised on new buildings, particularly in the Old City. No less than 7,000 buildings permits have been and are being dealt with by the Society's architect. Recently the Civic Advisor together with Mr. Harrison of the Public Works Department and Mr. Chaikin, F.R.I.B.A., drew up a complete series of building by-laws which has been published as model by-laws by the Government.

8. Shop signs have been controlled under a regulation originated by the Society. All streets both in the Old and New City have been named. Suitable ceramic plates made by the Bezalel School of Arts have been erected in the New City, and a complete set for the Old City made in the Society's ceramic factory, some of which are already in position.

All houses, shops and other buildings in the New City have been numbered.

9. The Society has planted and maintained all the existing street trees. An experienced gardener has been employed, who, it is hoped, will be taken over by the municipality.

A map and plan of Jerusalem and a portfolio of Jerusalem views have also been published in English, Arabic and Hebrew editions.

10. The Turkish clock tower was removed from the Jaffa Gate and re-erected in Allenby Square in a modified form with the addition of seven kiosks which bring in a total annual rental of £E560. The buildings are being handed over the the Municipality as from January 1, 1927, with the condition that part of the proceeds derived from the rent will be permanently affected to the employment of a qualified town planner and architect to advise the Municipality and the local Town planning Commission.

11. On December 8, 1925, the eighth anniversary of the liberation of Jerusalem from the Turks by General Allenby, the tomb stone of Philip d'Aubigny, English Crusader, signatory to Magna Charta, Governor of the Channel Islands and Tutor of King Henry III. buried here in the year 1236, was raised by the Society in agreement with the Director of Antiquities, with the consent and approval of the Orthodox, Latin and Armenian Patriarchs, under the direction of the Civic Advisor, at the charges of the Daubeny family. The bones of the Crusader were found beneath the stone and were left undisturbed. The stone was moved 60 cm. to the West to preserve it from the main stream of wayfarers to and from the Holy Sepulchre, and the inscription is now immediately over the head of the Crusader. A grille of suitable design was placed over the stone to afford further protection.

12. The Civic Advisor designed and superintended Sir Ronald Storrs' restoration in Pro-Jerusalem tiles the Chapel of St. John of Jerusalem in the Anglican Cathedral.

13. In May, 1926, the Civic Advisor made a thorough inspection of the Edicule in the Church of the Holy Sepulchre. A detailed report endorsed by the Director of Public Works was sent to the Chief Secretary and to the Orthodox, Latin and Armenian Patriarchs.

14. The work of preparing a proper town planning scheme for the City has occupied the Society's most serious attention during the past two years. Preliminary investigation work of existing conditions was carried out by the Civic Advisor, and the following plans were prepared in collaboration with the various Departments concerned: a geographical survey, water supply and drainage diagrams, a traffic accident plan, a map of schools, and an archæological zone plan, in addition to which the following original plans were prepared:—Volume of traffic on streets based on a traffic survey taken by the Society, a surface utilization map, a road classification plan, a road gradient plan and widths plan, a population plan, a land values plan, and an historic evolution diagram, a schematic road diagram, an open space map, and an analysis of housing conditions was made and recorded. From the study of this civic survey data, a large development plan was drawn up on 36 sheets of the Government Ordnance survey, showing the proposed zoning and the new and improved system of communications. Smaller scale maps to 1/10,000 of the town plan have been prepared. The Civic Advisor has been in constant touch

Digitized by Google

with the Public Works Department in connexion with the proposed drainage scheme. All plans, diagrams, surveys, statistics and data will be retained in the Civic Advisor's office and can be inspected at any time. On receipt of the share, promised by the High Commissioner in 1924, of the sale of the old iron at Acre, the Society will publish the Civic Survey and Town planning Report together with forty-two illustrations and six maps, an account for which will be opened at Barclays Bank.

15. The Society's functions and properties will be distributed as follows:—

To the Department of Antiquities the complete Rampart Walk from the Dung Gate to the Citadel, from the Jaffa Gate to St. Stephen's Gate together with all iron gates, handrails, guards, staircases, balustrades and appurtenances; the tools, timber and sundry building materials stored in the south gallery of the Citadel; the doors, windows, grilles and portcullis in the Towers of Phaseal and Hippicus.

To the Department of Lands: the Studio constructed by the Society over the Damascus Gate, the annual rental of which is £E25.

To the Municipality: nine hundred ceramic street name tiles to be erected in the Old City together with streets names map and file. Two boxes of house numbers together with register of numbers, system of numbering and file. The Clock Tower and kiosks together with file of contracts.

To learned societies, libraries and schools: old engraved maps of Palestine, thirty-two coloured prints of old Jerusalem, and Volumes I and II of the Society's Volumes of Annals.

16. The ceramic factory will be controlled entirely by the present manager, Mr. D. Chanessian, and the Society will cancel all sums paid for machinery, fittings, fixtures and rent.

The remainder of the Jerusalem maps, portfolios and articles left over from the British Empire Exhibition will be sold.

17. The Society has no financial obligations; small outstanding accounts, however, and the distribution of property will be arranged by Mr. L. G. A. Cust, District Officer, and the Civic Advisor. Any surplus funds will be devoted, if sufficient, to endow Jerusalem with an annual gold medal to be awarded for the best building erected during the year. The Royal Institute of British Architects are being approached in order to ascertain the procedure and method adopted in London for the Architectural medal. Should there be any outstanding balance after this, it will be divided between the Palestine Exploration Fund, the Jerusalem Musical Society and the Jerusalem Dramatic Society.

18. Mr. A. C. Holliday's engagement with the Society will terminate on December 31, 1926. He will then proceed on three months' leave and on his return take up his new appointment as Advisor to the Central Town Planning Commission on April 1, 1927. Mr. Holliday will continue to advise the Municipality and the local Town Planning Commission, and I earnestly recommend that Mr. Holliday's advice, both on these and on the building permits committee, be followed by the local Authorities.

19. I would like to record the debt of gratitude owed not only by this Society but also by the general community to the high religious and civic dignitaries of all denominations whose never failing attendance on the Council has contributed, especially during moments of political stress, to the maintenance of friendly relations and the good understanding throughout the communities which they represent.

20. I would take this opportunity of paying a final tribute to the conspicuous ability and devoted work of the Civic Advisor who is very largely responsible for the maintenance of what is good, the prevention of what is ugly and the general amelioration of the amenities of Jerusalem.

21. In the name of the Society I beg to thank Their Excellencies the High Commossioners, past and present, together with their Chief Secretaries and Heads of Departments for their constant interest and support.

THE FRENCH IN SYRIA.

Mr. H. Charles Woods lectured to the Central Asian Society on December 1 upon "The French in Syria," Sir Michael O'Dwyer being in the Chair. At the beginning of his lecture, Mr. Woods, whose remarks were copiously illustrated with some excellent maps and photographs of places and notabilities in Syria, stated that he was not going into the question of rival pledges concerning Syria. Post-War arrangements were post-War arrangements; he accepted the present position in Western Asia; and would speak, therefore, not on "Syria" but on "The French in Syria." The situation in Syria was, he said, of the greatest importance to the British Empire because: (a) the country lay to the flank of our route to the East and commanded a section of the Baghdad Railway, (b) the frontier lay alongside our Palestine-Transjordan-Iraq Mandated area, (c) the chief town of Syria, Damascus, was the centre of an Arab Nationalist movement which made itself felt not only in Syria but also in Egypt, Palestine and the Middle East generally. Among the difficulties with which the French had to contend when they first undertook the Mandate were the presence of the Amir Faisal at Damascus, and a little later a loss of prestige caused by the treaty with Turkey of 1921, when France ceded a considerable portion of Syrian territory to the Angora Nationalists. The communications and all military operations in a country were governed by its geography. The Syrian mandated area was divided into four practically independent States, only linked together in the person of the French High Commissioner. Whereas in Palestine the British had not deputed any real or nominal power to the inhabitants, the French in Syria had nominally delegated certain functions to the Syrians, at the same time keeping the real authority in their own hands. Although the French had enormous initial difficulties in Syria to contend with, the widespread unrest and discontent in Syria were also due to the development of events, some of which were entirely out of French control and for others of which they have been partly responsible. French prestige was low before the War owing to their sympathy with the Christians in and since the sixties of the last century. British troops were better paid than French troops and the inhabitants made more by the earlier British occupation. Moreover, the Nationalists had had a taste of self-government at Damascus. Also, the highly desirable abolition of the favourable position formerly occupied by the Effendis created serious opposition among their territorial leaders and set them free to intrigue against French and British administrations in their part of the world. The French were powerless to prevent the using of these conditions to their disadvantage.

But the French policy has been inconsistent, and while Generals Gouraud and Weygand, especially the latter, secured the confidence of the people by the efficient and just performance of their duties, the appointment and régime of General Sarrail were disastrous. General Sarrail—though the lecturer had personally received nothing but courtesy at his hands—antagonised the Christians by his anti-clericalism and the Muslims by his lack of consideration for their feelings. Then some of the French officials had tried to govern the country in a Colonial spirit and local Syrian officials had been appointed because they were French in their sympathies rather than because of the local confidence they enjoyed. Moreover, introduction of a currency based on the French franc had resulted in great losses to the Syrian merchants. Lastly the division of the country into four States, and the enlargement of the pre-War autonomous Lebanon into the Greater Lebanon had done a great deal to damage the French régime.

The lecturer then turned to the outbreak of the revolt in the Jabal Druse in the summer of 1925. There were special causes of discontent in the Druse country. The Druses had been promised an autonomy for which they were probably not fitted, but which had never been properly granted. The French Governor of the district, Capitaine Carbillet, appointed in 1923, was not popular and

Digitized by Google

when Druse representatives were sent to negotiate with General Sarrail directly, he either refused to see them or received them without the courtesy expected in the East. On the outbreak of the rising in 1925, the French force was too weak to deal with a serious situation; earlier defeats encouraged the revolutionaries and the French handling of the situation in October 1925 and the bombardment of Damascus turned what had till then been a Druse revolt into a Syrian insurrection. The French were blameworthy not so much for bombarding Damascus as for allowing the development of a situation which necessitated the bombardment. Subsequently, although General Sarrail was recalled, fighting spread to a wide area of the Mandated territory and at a given moment the French were in serious danger. However, reinforcements which should have been sent earlier, arrived, and the military situation was saved. The period of M. de Jouvenel's High Commissionership was spent in detached fighting and in peace efforts which were not successful. But the situation was very difficult, and if M. de Jouvenel did not achieve any wide local results he worked loyally with the British authorities in the neighbouring States.

With the arrival of M. Ponsot in October the questions before the French Government were these: would they maintain their present Army, probably of 50,000 men, in Syria, which was already a heavy drain on the Exchequer, or would they make serious concessions to the Syrians? The adoption of the latter alternative would necessitate an amnesty in which the leaders would have to be included and the granting of a wider autonomy at the very least to the State of Syria. Such an autonomy would certainly require French supervision but if it were accompanied by the establishment of a suitable native Arab ruler at Damascus, it might prove the solution of a problem which was complicated in the extreme.

In conclusion Mr. Woods said that whatever had been the faults of the French their difficulties had been enormous. The country under their Mandate has been in an abnormal state for the past eighteen months, but prior to the outbreak of the revolt, public security, justice and general conditions were undoubtedly better than they had been—or are now, for that matter—in Turkey. The Syrians were not fit either to govern themselves or to protect their country, and although they made special complaint against the French they would probably object equally or almost equally to any other mandatory Power. The French were our allies during the War, their presence in Syria was to our advantage; and it was better that we should understand their difficulties than criticise their actions.

In the subsequent discussion, Sir Arnold Wilson complimented the lecturer on his impartiality, which was so great as to make it possible to say that he had served up contemporary events without "spice." The French had trouble in Syria, he suggested, largely because they had neglected history. They imagined that their intervention in the 'sixties of the last century gave them a right to govern this notoriously disunited country. The truth was that the Syrians had always been a most difficult people: there was an inscription just outside Damascus, scrawled by a Roman soldier about 200 A.D., which, being freely interpreted, ran:—"The Syrians are a rotten crowd." That was probably the opinion also of the Roman soldier's lineal descendant to-day, the French soldier. Local independence meant to the various people in Syria a liberty to pillage their neighbours—a condition which had prevailed since the days of the Old Testament. In regard to the American University of Beyrout (of which the lecturer had spoken in high terms, mentioning the fact that Dr. Shahbander, a prominent Syrian Nationalist, had been educated there), Sir Arnold said that it was very doubtful whether such praise could rightly be given to an institution which turned out men imbued with ideas neither Asian nor European (nor even modern American) particularly as the U.S.A. was willing to play no active part in the Near East in accepting responsibility for the dissemination of President Wilson's conceptions. But it was not for Europeans, combatants in the Great War, to point the finger at men for certain actions taken during this war in Syria. Sir Arnold deplored the bombardment of Damascus as a crime and a blunder. He was relieved and surprised to find, from the lecturer's photographs, that the ruined area was only 300 ft. square, but he was convinced that this bombardment, without warning, of the oldest city in the world, was inexcusable. A thousand innocent people had been killed through it. Not only the foreign community, but also the native population of Damascus, should have been warned. In conclusion, Sir Arnold said that the only hope for the French in Syria was to abolish the small local States, which had no natural boundaries, and impose unity on the whole country. This might yet be done in Syria as it had been done in Iraq in the years immediately succeeding the Armistice under economic pressure combined with a unified administrative system. The existing small States within Syria were hopelessly artificial and could not endure: unity was Syria's greatest need.

Major Polson-Newman (who had supplied the lecturer with some of his photographs) referred to the distorted view of events in Syria which people in this country were apt to entertain. This false perspective was due to the propaganda of the Arabs—largely in Jerusalem and in Cairo—who seduously cultivated the tale of French reverses and "rebel" successes.

Major Salisbury-Jones, who was for two and a half years *liaison* officer with the French Army in Syria, spoke of the future possibilities of Syria, mentioning that the route of every world flight to date had included Syria, and also of its importance to the British Empire. For his part, he took a French view of things, never having received anything but extreme courtesy at French hands. It was the duty of Great Britain to stand by France in her troubles.

Sirdar Ikbal Ali Shah then put forward the Muslim point of view. He happened, he said, to be in the East at the time of the bombardment of Damascus, and could testify to the almost fanatical feelings which it aroused in Islam. France had now taken the place of Great Britain in the eyes of many Muslims as the anti-Islamic Power. He then referred to the lecturer's remarks on the fact that, until the arrival of M. Ponsot, all France's High Commissioners in Syria had been either soldiers or politicians. He wondered why this was put forward as an explanation or excuse: had not Great Britain produced such successful men as Kitchener in Egypt or Curzon in India?

Sir Gilbert Clayton spoke of the necessity of Anglo-French co-operation in the Middle East. After the War, when France took over Syria, some Frenchmen were suspicious of the integrity of British intentions towards Syria. For his part he thanked God that Great Britain had no desire to possess, and were not charged with, Syria. The difficulties of administering it were enormous. As an instance of the delicacy of relations between Syria and Palestine, he mentioned a certain raid on Damascus which without doubt had emanated from Transjordan. As soon as the Jerusalem Government heard of it, they sent up troops to the frontier to intercept the rebels; and a few hours afterwards received messages of protest against the incursion from the French High Commissioner. The fact that the British authorities had already acted in the correct way considerably impressed the French. Anglo-French relations, at any rate while General Weygand was in power, were excellent; and this state of affairs prevailed also under the existing régime of Lord Plumer in Palestine. It was essential that such co-operation should persist.

The death occurred on November 20 of Mr. Alexander Bowie, General Manager of the Allahabad Bank, India. He had 27 years' service in India.

Sir Ronald Storrs left Jerusalem on November 29 for Jaffa, where he embarked in H.M.S. Cornflower for Famagusta to take up the Governorship of Cyprus.

THE NEW WORLD OF ISLAM.

The Near and Middle East Association met on December 2, at 14, Queensberry Place, South Kensington (by kind permission of Mrs. Beauchamp Tufnell) to hear a lecture on "The New World of Islam," by Sirdar Ikbal Ali Shah. Sir Ernest Denison Ross, who presided, said, in presenting the lecturer, that the Sirdar needed no introduction to students of Oriental policies, but he might mention some scholarly and illuminating articles which the lecturer had recently contributed to the most reputable journals of this country, particularly his "Mecca" articles in *The Times*. The Sirdar was an Afghan, had travelled extensively in Asia and Europe, and has served his country in the Diplomatic Service with distinction.

The lecturer began by stating that there was an awakening in the East, both spiritually and politically: and he proceeded to give details of that awakening. The real cause of the Oriental ferments, he thought, lay in the Western impact. The Asian races, however, self-sufficient and immovable in remote antiquity, could not hold their own, and "let the legions thunder past and plunge in thought again." He noticed that Europeanisation as near as Angora and as distant as Kabul and Peking. The wave of Western culture (he would not use Western civilisation, for no one was ever able to define the term civilisation to him) had, the lecturer thought, in its progress eastwards to fight its way against age-long traditions and ideas; often it was delayed when it came against prejudices, but it fought on its victorious way. He did not agree that for the regeneration of Islam the old order of things must be swept off, although he suggested that a partial adoption of European methods might be useful. In his opinion if ever a day came when the Easterner was more European than the Westerner himself, that day would show to the world that the Oriental was no asset to anyone. He believed in a happy blending of the East and the West, and many people in Asia and Europe, the Sirdar thought, were the living refutation that the two hemispheres did not meet. The modern political phenomena in the Islamic East were due to a revolt against the autocracy of the old monarch and the thraldom of the priestly class. The one was supported by the other, and both sections kept the people of Islam back. The present-day agitations in the East were in the nature of a reaction against the clergy and the despot of old, and were not a revolt to alienate a particular country from the faith of the Prophet. The Islamic world was a great imperial factor for Great Britain, for, backed by the good will of that large section of the human race, England need never fear the designs of her enemies.

Replying to a question, the lecturer said that the Muslims and the Christians could work very well together for the general good of humanity if both religions were correctly preached and their essence were truly comprehended.

In the discussion after the lecture Maulvie Malik, of the Ahmadiyya Mosque in London, emphasised the spiritual side of the awakening of Islam. He likened the British Empire to the Roman Empire, claiming that just as Jesus Christ had arisen to lighten the Roman Empire, so in the time of the British Empire another Prophet (Ahmed) had arisen to claim the allegiance of mankind.

Sir Thomas Arnold put in a word for the "priestly class" of mullahs, maulvies, and so on, whom the lecturer had been inclined to repudiate. These men, he said, were often completely devoted to the task of studying the sacred word. He declared that the Muslims in their present perplexity should receive great sympathy from the West. What was needed now was a new presentation of Islam, based on the Quran. That would save the Muslim world from the materialisation of the West. The Ahmadiyya was one presentation: there was need of others. Often enough the Westernised Muslim knew more of the West than of his own East: more might be done by such men in bringing Islam up to date.

Sir Ernest Denison-Ross, in conclusion, doubted whether one could fitly talk of Islam as a unity, for Islam was rent by Shiah and Sunni as Christendom was rent by Catholic and Protestant. Turning to the alleged anti-Islamic practices of Kemalist Turkey, he said that the Turks were a people who, when they became possessed of an idea, were really obsessed by it. In their early days there were no more doughty champions of Islam than the Turks: in the first five centuries of their history as Muslims there was no instance of a renegade Turk. Similarly their enthusiasm for Westernism made them think that by throwing all their fezes into the Bosphorus they could so fill it up as to make Europeans notice no dividing line between Europe and Asia. In Egypt, on the other hand, there was a very definite religious feeling. It was possible that as an outcome of the disputes over modern interpretations of Islam now going on in Al Azhar there might be such a new presentation of Islam, based, as Sir Thomas Arnold had suggested, on the Quran, which those Muslims who had suffered the Western impact might accept.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

THE PROBLEM OF SYRIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your report of my address on Syria before the Near and Middle East Association, I notice that you quote me as having said that "there was no connexion between the Druse revolt and the Syrian rising." As I think this may lead to misunderstanding, I should like to make my views on this matter clear.

The French maintained that the cause of the Syrian Revolt (including the Druse outbreak) was entirely due to Pan-Islamic influence and anti-European feeling in Asia. That this antagonism to European influence existed was, I think, beyond doubt, but I think it more probable that the Druse insurrection with its results was exploited in the interests of Pan-Islam than that Pan-Islam was the cause of the turmoil in Syria.

While I think that there was no connexion between the two risings, as far as causes were concerned, I am of opinion that the Druse rising provided the opportunity for the Syrian Revolt.—I am, etc.,

E. W. POLSON NEWMAN.

23a, Castletown Road, Kensington, W.14.
December 4.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In the report of the lecture on Syria by Major Polson Newman in your last issue, you rightly say that I took exception to the lecturer's statement about the love of the Oriental for money. But as the report is somewhat compressed, allow me to make it clear that when I spoke of Gibbon, I linked his name with that of an eminent scholar in Professor D. M. Kay, who, while addressing a distinguished gathering in Edinburgh on the subject of "The value of Islam for a League of Nations," said: "I have inquired and to this day I have not been able to find one Muslim multi-millionaire."

To know the real Syrian one ought to see more than what lies on the surface of things. A vulgar Easterner is not a symbol of the East any more than a vulgar Westerner is necessarily typical of the West. Such men represent lower conditions of life and thought; they are puppets of environment. Not that class, either in the East or the West, but men endowed with a capacity of spiritual and intellectual development are really capable of representing their race and traditions and of interpreting the inner life—"the life of life," as Shelley puts it—of which average "street Arabs" in all lands are but pale and sometimes distorted reflections. "All minds,"

Digitized by Google

says an Eastern poet, "reflect the Master Mind. Some, like a mirror, reflect the sun and rival it; others have no light to return, but take of it what they receive, like a stone or a clod of earth." Major Polson Newman is right after all; the stone and clod of Asia are indeed greedy, but there are other elements too, which one may only hope he may yet gain access to.—I am, etc.,

IKBAL ALI SHAH.

PALESTINE AND RUSSIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In the leading article in your issue of December 2, you remark:—

"It is from such background of doubt, if not of fear, that Zionists are turning their attention to another—and we cannot help thinking rival—scheme for the colonisation of the Jews; we mean the scheme of the Moscow Government for the settlement of Jews in Southern Russia."

I shall be much obliged if you will permit me to point out that the Zionist Organisation is not interested in the least in the colonisation scheme in Southern Russia, which is intended solely for the amelioration of the economic conditions of the Jews in Russia.—I am, etc.,

ISRAEL COHEN.

The Zionist Organisation, 77, Great Russell Street.
December 6.

[Perhaps no such absurd imputation could have been made as that the Zionist Organisation is concerned with colonizing activities in countries other than Palestine if, instead of speaking of "Zionists turning their attention," we had said "Jews turning their attention" to the plan of "Crimeanism." We had in mind, however, not only those Jews who have always opposed the Palestine experiment but also those Jews (e.g. the late Mr. Zangwill) who would have liked to see a "State of Zion" in a country of wider or more untrammelled possibilities than may appear at the moment to exist in Palestine.—ED.]

BY MIRZA FIROOZ KHAN.

[This article was written before the capture in Iraq of the Salar-ud-Daulah, but we think it of interest to publish it.—ED.]

Tabriz.

Ever since August uneasiness has prevailed among the wretched people of this province. The Pitchdari (Pizder) are again up in arms in their forests, near Sardasht; troops are being hurried thither from Tabriz; and the population in that neighbourhood is said to be panic-stricken. This trouble, moreover, has come at the worst possible time. Grapes are still not quite ripe; and the harvests—the year's toil of the farmer—are yet in the fields with the enemy on the move! Government employees—managers in the departments of Finance, Posts, Indirect Taxes, Karguzar, and so on, have already left Souch-Bulak and have taken refuge in Mianduab—the territory of their own people.

The merchants, Persian, Armenian, and Jewish, have removed all their valuable to Mianduab. There they are with their families, and also a saddled horse ready in the stable should further flight be necessary! It is even reported that Mianduab itself is now empty, that bazaar shops have been taken in camel-loads to Maragha. Camels, however, are becoming scarce, for they are wanted not only by merchants but also by the military authorities, who are commandeering them, as well as mules, asses, fourgons, and so forth—in fact, anything that can move cartridges and maxim-guns. The population of Sulduz has fled to Urmia (Rezai), that of Souch-Bulak to Mianduab, that of Mianduab to Maragha, and even in Maragha the people all have their bales and bundles ready with saddle-horses, waiting to see what the contingent of 500 Cossacks will do. These soldiers, who have started for Sardasht, are splendid men physically, and are well supplied with arms and ammunition. A party of 800 Cossacks, who were due to leave for Sardasht, laid down their arms in Sardari (eight miles from Tabriz, on the Maragha road), refusing to go any farther. They argued that they had been fighting for the last three years in Luristan, in Ardebil, and so on, that they were now worn and tired, and that others should go to this Pitchdari quarrel. They were permitted to return to Tabriz; but, once inside the walls of the barracks at Kumbaghi (Sand-Garden, the Cossack H.Q.) they were stripped of their uniforms, and then turned out on to the streets!

The five hundred men who have already gone were not over-loyal, but they did go. It is said that the Pitchdari number 4,000 men, well armed and well barricaded behind the hundred-year-old trees of their forests, and have plenty of dry bread and onions, and fine spring water to drink. They lack nothing! Our Cossacks have all modern conveniences, including special Cossack-cooks and a Russian-made field-kitchen! Their officers have with them home-made beds and bedsteads.

Already the first battle has taken place. The party of Cossacks, after waiting in Souch-Bulak for two weeks for further reinforcements, started (finding none forthcoming) for the front. The city of Souch-Bulak has, therefore, been evacuated by the troops, and there is no reserve force left behind to call up in case of emergency. This is neither tactics nor strategy; and their commander knows it. But he cannot help it. To maintain the spirit of his troops, and to preserve their dignity in the eyes of the local Kurds, he must go forward.

In the battle, our troops were outnumbered by five to one. The Pitchdari are good fighters, and in addition had the advantage of position—their thick woods—and of knowledge of the roads and the ways through the trees. Four hundred of our men fell bravely, and only one hundred returned to Souch-Bulak to await assistance. All the ammunition, and 140,000 krans in silver, were abandoned to the enemy.

In the meantime the British are being blamed for this disaster to the Cossack force! It is being openly stated by our zealous patriots that every "cent" in the possession of the Pitchdari is British money, that every rifle in their hands is a British rifle, that spent cartridges are being refilled by British experts, that English soldiers dressed as Pitchdaris are fighting our Cossacks, that British officers, dressed picturesquely as Kurdish chieftains, are personally leading the Pitchdari troops, and so on and so forth.

Local Kurds, that is, Persian subjects, have been told to get ready for "the front." All the Kurdish Princes here have been ordered by the Amir Lashgiar to assemble their fighting forces—cavalry—and report in Souch-Bulak to the Cossack Commander within eight hours. At least one Prince, the first so to report to the Commander, had crossed on horseback the fifty miles between his home-village and Souch-Bulak within two hours. He changed horses at every ten miles. Faster going than a Ford!

The Amir Asad (son of Hajji al-Khani, himself now too old to go to war) is in Souch-Bulak with his 2,000 fighting men. This Amir is the al-Khani of the Beg-Zadeh tribes. Carani Agha, of the Mamash tribes, was there almost at the same time. Sardar-Mookrie, of the De-Beokrie tribes, Bafer Agha of the Mongoor tribe, and other minor Aghayen are in Souch-Bulak with their men.

As Kurds are natives of this country and know the paths and passes, they were invited by the Cossack Commander to lead. The Kurds objected, and proposed that the Cossacks, being a disciplined army, should take the lead. Eventually the Cossacks did lead. The Kurds invented a "military tactic" of their own. They pinned narrow green stripes to the arms, so that they might be known to each other and distinguished from the enemy Kurds. But the enemy Kurds were no less masters of fighting. They got hold of the game at once. They, too,

Digitized by Google

pinned green ribbons on their arms, and began as if carelessly to approach our native Kurds. Our Kurds, seeing their green stripes, paid no special attention to them until the enemy were near enough for a hand-to-hand fight. And then the foxy enemy did attack. They attacked with such force and speed that 300 of our Kurds had fallen to the enemy *khanjar* (dagger) before our men realised the trick that had been played upon them. The attack, however, was repulsed, and repulsed with the same force and speed as the enemy had shown, so that the hostile casualties were as many, if not more.

Regular troops are being hurried to the battle theatre every day, both by way of Sagguz, Mianduab, and by Haydarabad (the landing village on the south-western shore of Lake Urmia). The troops sent to the front number about 4,000, with abundant ammunition and guns.

Recently the notorious Simko (also Ismail Agha) has been showing himself again. He is in his native village of Chahri-Gala. He has a few hundred men with him, and the fighting seems to have changed its centre from Sardasht and the Pitchdari to Salmast, the "Simko front." The military authorities, having now two fronts, have decided to call up the old-régime *sarbaz* (soldier) and also the disarmed tribes of Qarasa—Dagh (Black Mountain) and the Shahsevan tribes of Ardebil and Sarab. This is owing in great part to the restless spirit which has prevailed among the regular troops since the rebellion of the Salmast troops in Dilman and the murder of Yusouf Khan, the Commander, by his own soldiers.

Shahsevans received the offer of putting on military uniforms and of receiving monthly pay like the regular troops, but they refused both the uniform and the money, saying: "If we die, we die for our country, let our blood be *halal* to her; but if we are victorious, let us have the horses, the rifles, and the wives of the enemy Kurds." The authorities consented!

The wealthy natives—merchants and landowners—are suffering a levy to give to the national army anything from five to twenty horses. If they have horses, they must give them; if not, they must buy them and give them. The only condition of this compulsory present is:—"If the Cossack dies, your horse also is gone. But if the Cossack triumphs, then your horses will surely be restored to you!"

On the route-march of the army, all the villages are being registered by the military authorities. This registration includes the number of stables that can be found in each village, the size of the stable, the amount of hay and straw owned by the peasants, and the type of horse that can be had in these villages. The population of that part of the country is, therefore, extremely anxious ("suspended and oscillating in the air"). They can neither leave their homes for safer places, nor feel themselves safe enough to prepare winter stocks for themselves and their cattle.

I have referred to the very widespread statement that the British are directing the Pitchdari movements. Other, saner people, however, state that the "late" Sultan Ahmed Shah is among the Pitchdaris, that the former Crown Prince Muhammad-Hassan Mirza is leading them, that the Salar ud-Daulah is at the head of the movement, wishing to create trouble for the new Shah, and so on and so forth. This last statement may have some truth in it, as that old Prince is quite fond of such adventures, if not of the desire to possess the Throne of his father and grandfather!

Zafar-ud-Daulah, a nephew of the late Shusa-ud-Daulah of Maragh, is the Commander-in-Chief of the Government troops, and by birth, inheritance, and nature is a military despot, quite resembling his famous uncle. It is openly stated that if any one of the Princes whom I have mentioned be among the Pitchdari Kurds, he (Zafar-ud-Daulah) not only will not fight the Pitchdaris (which would imply fighting against his former idols) but also he will at once pass over to their side, to overthrow the Pahlavi dynasty.

But to see this, we must wait.

THE WEEK AT HOME.

London, Tuesday Morning.

By-Elections.

In the by-elections that have recently taken place in England there have been few surprises: in the main it is true to say that Labour has shown superiority in the towns, and Conservatism in the country. Commander Kenworthy easily retained Hull in his new guise of Labour supporter, and Colonel Howard-Bury has secured Chelmsford against the threats of Liberal and Labour. On the whole, however, there can be little question that the tide is flowing against the Government. Somebody has got it all worked out in percentages, and since our present system of government is large a matter of arithmetic, it may be of interest to give these. The Conservatives appear to have lost 18 per cent. of their votes since 1924; the Labour people to have gained 22 per cent.; and the Liberals to have gained 6½ per cent.

In other words, the argument that was used at the time of the Conservatives' great victory is reinforced. If these percentages are added to the figures of the general election the strength of the parties would be: Conservatives, 6,100,000 votes; Labour, 6,700,000 votes; and Liberals, 3,200,000 votes. How truly the present Government represents the nation, therefore, is more than ever a matter for the experts. If things move continuously in their present direction, it is fairly obvious that Labour will have a majority of votes at the next General Election. In seats, however, the Conservatives may still hold the upper hand.

The Liberals.

It is by no means certain, however, that events will continue to move in their present direction—the incalculable force is the Liberals. What they are at present doing it is exceedingly difficult to determine—so that one has considerable sympathy with those pathetic old gentlemen who write bewilderedly to *The Times* asking what they, good Liberals who will have nothing to do with the wicked Mr. Lloyd George, are to do for the real advancement of their cause.

Most observers are taking it for granted now that the anti-Lloyd Georgites in the Liberal Party will form an independent party of their own, with such distinguished men as Earl Grey, Sir Walter Runciman, and Mr. Spender as the shining lights. In this bright band there are both wealth and talent: the one thing lacking is numbers. But what they can hope to do in the existing conditions or even in the immediate future to prevent the direction of

the country from falling into or continuing in the hands of their rivals is not quite clear.

In the meantime Mr. Lloyd George is increasingly credited with the intention of finding a *modus vivendi* with Labour. The latest, unofficial, suggestion is that he should leave to Labour the urban seats, and himself concentrate upon winning the agricultural seats from the Conservatives. One is surprised by the amount of theoretic support which is being accorded to Mr. George's plan of campaign. It received what was virtually very strong backing the other day from Mr. C. P. Scott, whose influence on the whole history of Liberalism in the last thirty or forty years it is hard to exaggerate. The Editor of the *Manchester Guardian* believes sincerely in an understanding between Labour and the Liberals. But, as I think I have said before, the position of Labour toward the Liberals is rather like that of Rome towards the eager Anglicans. Alliance is possible only on one set of terms. There can be no compromise, however much certain of the more "political" leaders of the Labour Party would like it, with the weaker party. As things are, such indulgent talk appears more to emphasise the frailty of the Liberal Party than anything else.

The Emergency Regulations.

Somewhat sooner than had been expected, the Conservatives have taken to heart the charge that they were becoming unconstitutional. Last week in the House it was announced that the Emergency Regulations had been almost wholly revoked. Quite patently this is a triumph for the Opposition. To the apparent surprise of a major section of the Conservative Party, no Communists have been able to prevent the miners from returning to the pits. The fact that the mine owners have been allowed to win this long struggle without any serious incident ought to convince even the most hardened Die-Hard that our people is a law-abiding people.

Roman Catholic Disabilities.

The House of Commons has for long been jibed at by some of those who take an objective and dispassionate view of things as the House of Pretence, into which real feelings are very seldom allowed to enter. Occasionally, however, some measure is debated which stirs real sentiments in the hearts of members. Then (and then only) perhaps it is the duty of every student of English politics to study the debates. Such an occasion arose last week, when the Roman Catholic Relief Bill was read for a third time. It was extremely interesting to find old prejudices, that one had thought dead in these latter days of toleration, cropping out against the Catholics. But the less bigoted section of Parliamentary opinion won easily in the end.

The Bill was a private member's Bill to repeal various obsolete and obsolescent statutes relating to Roman Catholicism in this country. Eight Acts of Parliament from the time of Edward VI. to that of Queen Victoria imposed various restrictions on Catholic activities. In this repealing are involved such changes as the removal of the prohibition against the use in Churches of images and Roman books of devotion, the permission to wear Roman vestments and to exhibit objects of devotion in the public streets—as during a procession, the regularisation of the position of the Roman Catholic monastic orders in this country, and the equalisation of the position of Roman Catholic and other charities in regard to income tax.

Now one or two newspapers have girded their loins quite in the old "No Popery" style, and have fulminated against the desirability of public processions in the Roman Catholic interest. It is, moreover, thought in some quarters that this Bill is just part of a dark Anglo-Catholic game to upset the traditional Church of England. In the Commons, however, only 40 members, led by Sir Thomas Inskip, could be found to oppose the measure, and the matter was not even pressed to a final division.

Changes in Mayfair.

The life of Mayfair is changing quickly in these days. No sooner is it announced that Dorchester House is in the market, than another place, Sunderland House, is said to have been sold. This house was a wedding present from Mr. W. K. Vanderbilt to his daughter when she married the Duke of Marlborough, and is supposed to have cost half a million pounds.

But that is not all with Mayfair, in which it is now true to say that a great movement is going on. Last week the Devonshire Restaurant was opened, and this is regarded as the beginning of a new era. Social life—theatres, hotels, and restaurants—is indubitably tending to concentrate upon Mayfair. It is certain, however, that there will be considerable resistance to the westward trend, and it may be long before Mayfair becomes again the heart of London's entertainment and joyousness.

The New Scare.

Each post-War year, it seems, brings with it its special illness. Generally this is some kind of influenza, and, indeed, "gastric 'flu" is a complaint which someone or other of us post-War weaklings usually has. At the present moment, however, a certain alarm is being manifested over one or two outbreaks, either at schools or colleges, of infantile paralysis, or poliomyelitis, as it is scientifically called. This disease appears to attack either the brain or the spine, and has a mortality of about 30 per cent.

It does not, however, seem to be very infectious, and there is certainly no need for panic. The number of cases is very small, and it is calculated that the odds against catching it are at least forty-five thousand to one. No doubt the authorities are acting correctly in taking every possible precaution against it, but its dangers, compared for instance with such an everyday peril as the traffic in London streets, whereupon fatal casualties occur at the rate of three a day, are really remote. It is natural, however, to dread the new and scientific agent of trouble and to overlook the older and more simple medium which is, so to speak, on our doorstep.

Mr. Alex Devine has just gone to press with his latest booklet on Montenegro, which bears the title, "The Silence of Montenegro." In this, his latest work, will be published the complete story of the Montenegrin campaign against Austria and the military services of the Montenegrins which, it is claimed, rendered possible the retreat of the Serbians through Albania. Many of the facts are taken from the State archives of Vienna, and throw an entirely new light upon the episodes of this period.

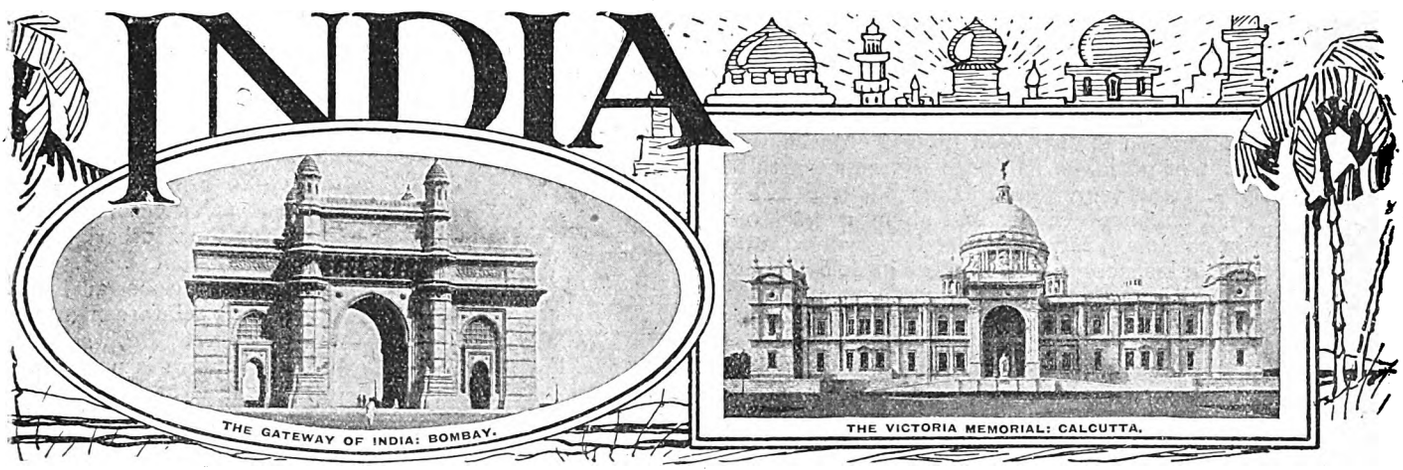
INDIA



PROGRESS IN THE PUNJAB.

It is universally admitted that the greatest need of India to-day is the improvement of agricultural production; a question that has been brought prominently before the public by the appointment of the Agricultural Commission and the selection of an earnest and informed student of agriculture as Viceroy. It is also generally recognised that two of the most important problems that have to be faced, before any real increase in Indian agricultural production can be attained, are the spread of education and the improvement of communications. In the important speech that he delivered on the conclusion of the recent session of the Punjab Legislative Council, the Governor of the Punjab gave an account of the remarkable advance achieved by the Province in these two directions, and spoke of the promise that it holds out for the future.

In the matter of education, the number of boys in the schools of the Punjab has doubled itself during the last five years: and, if the present rate of progress is maintained, it will take the Province eleven years to reach the goal of of universal education; while it has been calculated that, for the whole of India, that goal is forty years away. "If," said the Governor, "we accept the fact that universal education is, in present circumstances, somewhat of an impracticable ideal (since it would involve compulsion of a stringency for which we are not yet prepared) and assume the safer standard of eighty per cent., we should, if we maintain our present advance, reach this in some six to seven years. It would appear, from the figures given in the speech, that the impracticability of the ideal lies in the difficulty of persuading the people to send their girls to school; since the number of boys at school is at present in what the Governor described as "a very depressing preponderance." The Punjab educational policy has been rather to improve existing schools than to expand their number: and the "ineffective one-teacher schools" have gone down, during the last four years, from 2750 to 600. In a striking passage, the Governor said that, though they were making a vigorous attack on illiteracy and a substantial advance in secondary education, they had to ask themselves whether this was enough: whether what is needed is not only expansion, but some redirection of effort. "Our people are anxious for more education; they have begun to grasp at the opportunities we give them; but do they get from it all the benefit for which they hope and which we desire to give? Education seems at the moment almost an alien influence, outside the ordinary lives of great numbers of the people, driving them from their ordinary occupations, not impelling them to improve the every-day conditions of life, but leading them to seek others which economic conditions in reality make impossible of attainment. The vitalising of education is a grave problem; but it is one on which we have been forced to think gravely and must think more gravely in the future. Our initial effort has been to attempt to remodel our vernacular courses, so that they shall centre on rural science, embracing physical geography, agriculture, rural economics and the like. To this end we must begin with the teacher and end with the text-book." Schools for the training of teachers have been started at two centres in the Punjab, in which the Governor said he saw "the beginnings of what may become our revolution of the future": and he added that a work of no less importance in the process of vitalisation are the village libraries—now 1600 in number—under the charge of the village teacher: and the use of the teacher as the agent of the newly constituted Rural Community Board, with its programme of lectures and lantern-shows, carrying to the village the lesson of the Health, Agriculture and Co-operative Departments. The technical problem of bringing education to the illiterate masses of India is difficult enough; and the Punjab, which is, in a number of respects, the most go-ahead Province in India, has already gone beyond the technical stage, and is attempting to provide not merely education, but the right kind of education—a much more difficult task. When the Governor spoke of "the vitalising of education," and of the necessity of "beginning with the teacher and ending with the text-book," he set before the intellectuals of his own Province an ideal which demands the earnest attention of the educational authorities of the other Provinces of India, and not less of those of the Central Government.

In the matter of communications, the Governor rightly laid the greatest stress on the provision of adequate roads. He mentioned the gratifying fact that the long period of stagnation in the railway development of the Province had been broken, that upwards of 300 miles of new lines are under construction in the Punjab, and that the next few months might be expected to see important further additions to the railway programme in the Province; but his suggestion, that the extension and improvement of roads is a matter of considerably greater importance, is certainly abundantly justified. In referring to this subject he said, "At the moment, we fail in our duty of providing the cultivator with efficient means of bringing his produce to market: the absence of easy and rapid means of access to the village is equally detrimental to the trader; but, above all, we need a liberal expansion of our road services if we are to give to the Punjab that facility of easy intercourse which is essential, if we are to quicken its intellectual life and extend the sphere of its social and public interests." He went on to give figures regarding what had been done and what was in contemplation. In 1923 Government was maintaining from Provincial funds 1200 miles of metalled and 750 miles of unmetalled roads, and others being maintained from local funds: and, as the result of a Road Conference which sat in that year, the Provincial Government assumed charge of 600 more miles of metalled, and nearly 1000 more miles of unmetalled roads; while the metalling of the latter was proceeding at the average rate of 16 miles a year. In the present year, the metalling of 60 miles of unmetalled road is being undertaken: and the programme for next year includes the assumption by the Punjab Government of 300 more miles of metalled, and 700 miles of unmetalled roads, bringing the total, so taken over, to 2100 miles of metalled and

Digitized by Google

over 2500 miles of unmetalled roads, increasing the annual amount of metalling to 100 miles, and raising the Provincial expenditure, which was only 35 lakhs in 1923, to well over 100 lakhs. The scheme for the assistance, from Provincial funds, to District authorities for the maintenance of main roads, has also been revised on a liberal basis, and a sum of 7½ lakhs has been granted for this purpose in the current year. Complaints about the inadequacy of road communications, and about neglect of those already in existence, have been lately very frequent and are growing in insistency: and here, as in many other matters, the Punjab has given a lead to the rest of India which, it may be hoped, will stir authorities elsewhere from their present apathy and cause them to turn their earnest and immediate attention to a matter of the most urgent importance to the economic future of India.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 18.

Election Week and the People.

This is election week in Bengal, the voting in the outer suburbs having taken place on Tuesday and in the town itself yesterday and to-day, and it would seem as if the label "Swarajist" is to be seen no more in Calcutta; all sections of the Press are copying the Swarajists themselves and calling them "Congress Candidates." The others have settled down mostly behind the label of "Responsivists," which covers Moderates, Independents, Liberals, Nationalists and what not. In spite of the press reports that there is considerable excitement in the Indian parts of the town, there have been few indications visible to the ordinary observer away from the polling stations. Groups of bills and posters hang crookedly on the routes used by the lawyers and the clerks going and coming from the business centres, but in the rest of the city there has been little to indicate that elections are taking place. Monday was the day of one of the religious festivals, when it is the Hindu custom to bathe in the river Hooghly, and nothing could have shown more clearly the difference between the general attitude towards the elections, which do not matter, and the religious festival, which touches upon the realities of life. Thousands of all classes crowded the streets leading to the river-side the whole day long and grouped round the vendors of sweetmeats and of idols, the fortune tellers and the beggars who lined the streets and roads; but of elections and electioneering there were no signs.

The Voters.

At the same time there are orgies of speech-making and canvassing going on amongst the more westernised Indians, and very direct methods are being adopted to induce the voters amongst them to go to the poll and vote the right way. The Swarajists are leaving nothing to chance in their efforts to secure the defeat of Mr. J. N. Basu, the nephew of the late Bhupendranath Basu, who was recently a member of the Home India Council. He is opposed by Mr. S. C. Bose, who is still a *détenu* in a Burma jail, and if the Swarajists succeed in securing his election, it will mean that the north of the city will have no representative on the Council; another typical Indian paradox. In Bhowanipore, the suburb to the south of the European quarter, which has been cleaned up by the Improvement Trust and turned into a paradise for Indian lawyers, a battle royal is raging between two of them, and one of its leading features this week is the publication of facsimiles of three private letters written by the Swarajist candidate: this has put an end to his denials that he had ever written them, but it does not sweeten Indian social amenities. It is small wonder that the Reforms, and in fact the whole electoral system, are regarded as an alien imposition by the older type of Indian; but this does not at all mean that he does not wish to manage his own affairs *in his own way*.

The Press.

The Indian papers have been maintaining the best Eatonswill traditions. To read them one would think that the whole city was packed with frenzied enthusiasts unable to restrain their cries of love for the Motherland. There were certainly large crowds of students and so-called volunteers at the central polling stations and a great deal of hustling and jeering until reinforcements of police arrived and cleared the approaches. Both sides this morning claim to have won, but there is a much stronger note of confidence on the part of the Congress party and *Forward* goes so far as to give almost exact figures as to the number of votes polled for candidates at every station; so much for the secrecy of the ballot. The official results will not be out for some days, as the votes are not to be counted until the conclusion of the elections.

One and Fourpence.

Sir Purshottamdas Thakurdas, the Bombay magnate who signed a lonely minute of dissent in the report of the Currency Commission, has been in Calcutta this week and he has been given ample opportunities of convincing both Indians and Europeans of the soundness of his campaign for the one and fourpenny rupee. He has had a good "press," and at the weekly Rotary Club lunch he crossed swords with Mr. F. V. Rushforth, who, besides being an Exchange broker, is Calcutta's leading authority on the subject. There is no question of the capacity of Sir Purshottamdas as a controversialist, but the general feeling is that he has failed to make his point that "the one and fourpenny rupee is necessary in the interests of the agriculturists first and foremost." The Bombay cotton and steel interests are seriously hit by the rise in exchange, whereas Calcutta whose trade is a fairly balanced one between imports and exports, does not care one way or the other, so long as stability is achieved. There can be no question as to which side of India is more disinterested in its attitude.

Calcutta's Health.

For some few weeks past the official reports have indicated that the health of the city is by no means satisfactory and the last showed a state of affairs which is rapidly becoming serious. The hospitals are fuller than they have been for some years past at this season and both in offices and households there is a high proportion of casualties. The death rate in the last month was very high and in Tollygunge, the suburb a little to the south of Calcutta, it proportionally exceeded an annual rate of 100 per mille. There is little doubt that one of the causes of this state of affairs is the neglect of its sanitary duties by the Calcutta Corporation. The preoccupation of the Swarajists with electioneering affairs, which resulted in the abandonment of the regular meeting last week for lack of a quorum, is only the culmination of a state of affairs which has existed ever since the Swarajists came into power. The Mayor, whose duties might well occupy the whole of the time of an energetic man, is not only a practising barrister, but he is also the head of the Extremists, which is another full-time occupation; the rank and file of the members, anxious to be all things to all men, suffer from a perpetual dither when faced by any decision which may involve anybody in anything unpleasant. The result has been a slackening of the executive work for which the staff are not altogether to blame; it is hopelessly discouraging to be unable to obtain orders and to have ninety per cent. of your active files awaiting the decision of a Committee. Street cleansing and the removal of refuse may be humble tasks, but they are of first importance in the municipal administration of a tropical city; neglect such as is now going on in Calcutta is the direct road to epidemics and plague.

Digitized by Google

Men and Things.

Congratulations are due to the Judicial Committee of the Privy Council, as well as to Sir Lancelot Sanderson himself, on his appointment as a member, following his resignation of the post of Chief Justice of the High Court of Calcutta.

The acting appointments have been announced for the vacancies in the High Court; Mr. J. F. Graham, who was a District Judge in Assam and has already acted on a number of occasions, is to obtain one and Mr. Cammiade of the I.C.S. another; the third goes to Dr. Dwarka Nath Mitter, one of the most distinguished and accomplished of the members of the Vakils Library.

Over four hundred ex-Service men dined together at the Saturday Club on Armistice night; probably the greatest success of the evening was the singing of old War songs, judiciously edited; ladies were in the gallery. The fair sex had their share in the day in selling poppies in the streets and they were more in evidence than ever this year. At the official service, as well as at the Cenotaph, the Hon. Mr. James Donald was representing the Governor.

A case is reported from the Bombay High Court in which the representatives of a mill employee sued a motorist who had caused his death. The deceased was 38 years old and was earning Rs.120 p.m., or say £110 per annum; the Indian judge described the suggestions on behalf of the defence that his earnings might have been affected in the future by bad trade, illness, or other risks, as fanciful and, taking the deceased's probable life as 65 years and assuming regular promotions, he apparently added together all the sums that he might have earned until then, giving the total as his judgment. It is easy to understand the reluctance of ordinary people to go to Court in India.

Authentic reports are published of the case of two "wolf children" who some five years ago were found living in a case at Midnapur in company with wolves. One of them died, but the other is still living and is being brought up by missionaries.

The Trivial Round.

The third day of the autumn meeting at Tollygunge on Saturday attracted one of the largest attendances of the year, and as the afternoon went on the lawns were a picture, what with fresh flowers and frocks. The fields were generally small, but the majority of the winners were well backed, and the public must have enjoyed their day out. Many members were playing golf, and in the evening the Saturday Club was packed.

Most of the horses for the big meeting, which opens at the end of next week, have arrived and are at work on the training track on the Maidan. All the hardy animals are out, and there is a large crowd each morning to compare them with the newcomers; everything promises a good season.

The scores in the M.C.C. match against the Army at Lahore give a good indication of the type of game they are playing. The Army batted first and were all out for 73; the M.C.C. replied with 252 for six, when they declared, Sandham being 141 not out. The Army then went in for a second knock, making 212 for 5 wickets, and the match was drawn. We are keenly awaiting the arrival of Gilligan and Co. in Christmas week.

Cricket was again much in evidence in the week-end and, the bowlers losing their stiffness, scores were kept rather more down on the whole. Both the leading clubs are running practically two first teams.

Firpo's and Peliti's deserve a paragraph to themselves for the success of the efforts they have made during the past few years to brighten Calcutta. The former was the leader in the matter, and Calcutta is now able to boast of two restaurants which are run on cosmopolitan lines with gala dinners and dances throughout the season. Both have rebuilt their ballrooms for this cold weather and have imported new bands, and so with three dances a week at the Saturday Club after dinner, the lads of the village have a wide choice.

The winter season of charity dances, which is already far too long, has set in and there will be no peace for the next three months; it is high time that somebody took in hand the co-ordination of charities.

Concerts this week have included a second good military performance by the band of the North Staffords on Sunday evening, and the last Chamber concert of the School of Music in the Saturday Club on Monday. The latter was noteworthy for the first appearance of Signor Verga, a new 'cellist, who has come out to one of the restaurant bands and is an artist of the first rank. Next Sunday a jazz band will play at the Empire after dinner and the following week the Symphony Concerts open; music for all tastes.

For the next two days Claude Falkiner, the billiard champion who is touring the East, will be occupying the stage at the Empire; he will be followed by one of the Military real boxing shows, after which we are looking forward to the opening of "The Peep Show," which Sellick and Chamier are bringing out from Home. And so we settle down to the cold weather which makes Calcutta worth while.

Markets.

There has been little business passing in the jute market but prices have ruled very steady; hessians on the other hand have been dull and prices have weakened. It is interesting to note that the stock of hessians in Calcutta at the present time is probably the lowest it has been for the last five years and, with stocks in America low also, it would seem inevitable that a renewal of demand must come at some early date. Inquiry in the piece-goods market continues very restricted and the position may be taken as that existing during the past few weeks.

As a result of the agreement to stop plucking from the 20th of this month, the tea market has taken a decided turn for the better. The London market on Monday was strong and active and a similar feeling pervaded the sale here on the subsequent day, with prices showing increases of from ½ anna to 1½ annas per pound. It is estimated that the result of the restriction will mean a crop of something between ten and fifteen million pounds less than anticipated, so that, with the outturn figure 26 million pounds ahead of last year at the end of October, the total crop for the year will not exceed that of the previous year by more than 15 million pounds at the most. Restriction for 1927 is being discussed, but no decision has yet been arrived at.

On the Stock Exchange quiet conditions have prevailed in Government securities, but with few exceptions prices have remained at their previous level. Jute shares on the other hand have registered further rises, although at the close business has tended to be on a slightly smaller scale with a resultant lowering of prices over the best. In the coal section there has been a moderate turnover; but there is undoubtedly a weaker feeling, and in some cases sellers, wishing to take their profits, have not found it so easy to find buyers. With the tea crop closing down more quickly than anticipated and a good sale here this week, tea shares have attracted considerably more attention during the last two days, although the inquiry is still on a considerably lower scale than was the case a few months ago. A few deals have recently been done in Straits dollar rubber and tin shares at previous rates.

The Exchange market has been quiet throughout the week, especially for forward deliveries; the closing quotation for Ready T.T. is 1s. 5 13-16d. Money continues very easy.

INDIAN MAIL.

The General Election.

Much has been written about the necessity for educating the Indian electorate, though little practical effort has been made in this direction so far; but the education of the Indian candidate, who gave an interview to a lead-

Digitized by Google

ing Indian nationalist newspaper in mail week, thus discusses the question of electioneering speeches. He admits that they ought to be temperate, but says "there are kinds and kinds of temperate speeches. So far as denunciation of your opponent's policy or the exposure of his pusillanimity is concerned, no bones are broken by strong language, and I think the sting of electioneering will be largely softened, if the propaganda is continued according to drawing-room manners. But this is not the same as indulging in mean and cowardly personal attacks, hitting below the belt or stabbing your opponent in the back. And if we can keep the distinction between these two aspects of electioneering and avoid the latter, we will be none the worse for all the intemperance of language that we allow our selves to indulge in."

In the same interview, the candidate declined to forecast the result of the elections, on the ground that "any kind of forecast will be a sheer enterprise." But he made it clear that he expected a win for the Swarajist Party, and proceeded to outline their policy in the Legislative Assembly. "In particular we will work for the interests of the Indian public in matters of finance and administration. We shall fight hard to get these departments transferred from the hands of the Secretary of State to the Government of India which in turn we shall make subject to the will of the Assembly. We shall limit the expenditure to a sum far below the present scale, by forcing an agreement between the Government and the Legislatures. No additional expenditure of a military character shall hereafter be incurred, unless assented to by the Assembly. The civil expenditure ought to be brought under the control of the Legislature, and there must not remain any power of restoration in the hands of the Governor-General in Council. Increasing subordination of the various services to the Government of India, and through them to the people of India, is also a part of our programme. Indianisation of the various superior services should be as rapid as it could be made, and we shall spare no pains that it should be so. Moreover we shall immediately bring about complete detachment from any communal or sectional bias in carrying on activities within the Assembly."

So now the Government of India know what to expect. As for the means to be adopted to bring about the results described—except, perhaps, "complete detachment from any communal or sectional bias"—it appears that the Swarajists still rely on mass civil disobedience and the refusal to pay taxes: in which the candidate professed to see "nothing wild or visionary—sooner or later they will become necessary items in our national activities." But he admitted that it would take some years to "create an atmosphere favourable to launching these two movements. The momentum necessary to inspire 330 millions of people with a wish to take a forward stride of this character cannot be secured within a few months, and to my mind at least two solid years must be spent in mere preparation of the ground." If the Statutory Commission is not set up before the appointed year 1929, its prospective members will at least be able to realise now the sort of *fait accompli* with which they may expect to be faced, and the means that will be employed to bring it about—if the Swarajists win the present election and—an even larger if—they succeed in working out their policy according to plan.

Trade Returns for September.

The returns of India's sea-borne trade for September show a decrease in value of both imports and exports, compared with the figures of the previous month; the former declining from 1974 to 1894 lakhs, and the latter from 2559 to 2283 lakhs. The net import of treasure amounted to 189 lakhs against 212 lakhs in August: and the visible balance of trade in India's favour was 276 lakhs, compared with 439 lakhs in the preceding month. The share of the United Kingdom in the total trade of India fell, in imports, from 50 to 46 per cent., but rose in exports from 24 to 29 per cent., from the August percentages. The shares of Japan, the United States and Germany stood at 6, 6 and 8 in imports, and 4, 10 and 6 in exports; the variation from the August figures being small, though the United States' shares in exports fell by two per cent, except in the case of Japan, whose share in exports show a startling fall from August's percentage of 11. This would appear to be mainly due to a great decline in Japan's takings of raw cotton; for whereas, in August, she took 24,000 tons out of a total export of 37,000 tons, in September, when the total export was 18,700 tons, she took no more than 4800; while Italy took 5000 and Germany 2700—the former more than twice as much as she took in the previous month, the latter a little less.

Under the major heads of imports, the figures, compared with those for the previous month, show a small rise under raw materials, from 142 to 143 lakhs, and a decline, under manufactured articles from 1435 to 1386 lakhs, and under food, drink and tobacco from 362 to 330 lakhs. The imports of piece-goods amounted to 149 million yards in quantity and 473 lakhs in value. In exports, there was a rise, under food, drink and tobacco, from 715 to 729 lakhs, and a fall, under raw materials and produce, from 913 to 770 lakhs, and under manufactured goods from 909 to 765 lakhs. Exports of raw jute amounted to 60,000 tons—twice the amounted exported in August—valued at 217 lakhs; which, when compared with the August value of 130 lakhs, shows a considerable drop in prices. Price of gunny cloth and bags remained practically the same as in August: the figures for September being 138 million yards of cloth, valued at 267 lakhs, and 39 million bags valued at 220 lakhs.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
London, Tuesday Morning.

The P. and O. Report.

A year ago the directors of the Peninsular and Oriental Steam Navigation Company decided to propose a reduction in the dividend on the deferred stock from 12 to 10 per cent. on account of the adverse conditions experienced during the twelve months. The step was taken as a precautionary measure, and the present report shows that this conservative policy has been justified, for while the general position failed to improve during the past year and in some respects became worse, the directors are able to recommend the maintenance of last year's dividend rate. They are careful to explain, be it noted, that it is not on account of the profits made during the year that they are able to do this. Actually the disposable balance totals £920,000 as compared with £955,000, and it is interesting to note that of this total £275,000 is allocated to the debenture redemption account. It is declared that if it is possible to add to this sinking fund as hitherto there will be sufficient in hand by 1840 to pay off the whole £7,000,000. The references in the report to the outlook are on the whole encouraging. A good season is anticipated in Australia, though the drought in large areas in Central Queensland will restrict the produce available for export. Business in Japan is approaching the normal, and in the Straits it has improved, while the outlook in India is now brighter. China is the most unfavourable spot on the horizon, and we can only hope that the statement in the report that it is considered that things will improve before long will prove correct. *En passant* shortly following the issue of the report came the rumour that the P. and O. Company is henceforward to insure its vessels in the open market. This would mean a reversal of the policy so far followed, for the vessels have hitherto been covered by the company's insurance fund which now amounts to £3,328,210. If the report is correct this amount will be available for other purposes, and no doubt something will be said at the forthcoming meeting on the subject.

A Better Trade Outlook.

A most unsatisfactory year from almost every point of view is closing on a note of sustained optimism. It is indeed impossible not to feel now that the outlook for the immediate future is brighter than at any period since the end of the War. The thing that has held up enterprise and impeded commercial activities for years has been the uncertainty with regard to the labour situation. This year the event that had hung over industry like a cloud actually happened and the result of the futile general strike and the coal dispute is to leave the industrial horizon clearer than it has been for a long time. In short the way is clear at long last for the definite revival of trade, and that it will revive is clear from the vast list of orders that are being placed with engineering and shipbuilding concerns—orders the fulfilment of which should speedily make a noticeable difference in the unemployment returns. In the near future, too, there are many important undertakings in sight, notably in the Near East, which should bring a vast amount of work to this country. One might instance the various projects in Palestine—the Rutenberg scheme and the Haifa harbour project—and the various developments that are in train in the Sudan. Apart from contracts of the nature indicated the general improvement in world conditions presages an extension of general trade, so that, given the industrial peace which now seems assured, commerce should now go rapidly ahead.

Economic Conditions in Albania.

It is scarcely open to question that in no part of the Near East is economic progress more difficult than in Albania. It is not that the country is devoid of resources, for, as we know, it is now reported to have promising oil deposits, while it has great stretches of forest which constitute an important source of potential wealth. The country is, however, entirely undeveloped—until recently a railway track was unknown—and before there can be any definite improvement it is obvious that a very great deal will have to be done; swamps must be cleared, the system of roads extended, and the ports developed. It is cheaper to do these things in Albania than elsewhere, owing to the system of compulsory labour which obtains, and to which it seems no exception is taken. In view of the general position of the country it seems strange on the surface that it should find itself more or less in the position of a Naboth's vineyard as regards one of its neighbours, but there is no getting away from the fact that in recent years Italy has sougnt very persistently to extend her economic influence in Albania. The question of foreign influence in Albania has recently been the subject of an interesting article in the *Wirtschaftsdienst*, in which it is pointed out that Albania's communications with foreign countries are almost entirely through her ports —San Giovanni di Medua, Durazzo, Valona, and Santi Quaranta. The harbour works that are being carried out at Durazzo and Valona are being done, it is emphasised, with the credit granted by Italy, while the position of that country in relation to the ports has been strengthened by purchases of land by Italian subjects. The fact that the two countries are so to speak contiguous is a natural explanation of the growth of economic relations, but the development of Italian influence has gone beyond what might reasonably have

Digitized by Google

been expected, and it is not surprising perhaps that Italy's activities have aroused suspicions in the Balkans. Trade, however, is the ultimate arbiter of a country's external relations, and the fact that at the present time Albania's trade is almost exclusively with Italy is no doubt a sufficient explanation of the intimate connexion between the two countries. As might be expected, Albania has a very adverse balance of trade which will only be modified by favourable developments with regard to petroleum and the exploitation of the forests.

Coal in Turkey.

On another page in this issue will be found a brief summary of the coal industry in Turkey, from which it will be seen that, as might have been expected, there was a very sharp increase in output this year as a result of our coal strike. Actually, however, owing to the conditions obtaining at the Turkish mines the increase was not nearly sufficient to meet requirements, and the consequence has been that prices rose out of all proportion to the commodity. It is not surprising when it is borne in mind that the strike here meant that Turkey had to rely on her own resources entirely, and as the necessary machinery is lacking at the mines it was impossible to raise the requisite quantities of fuel to satisfy the country's needs, and the consequence has been that while, as I have pointed out, prices have gone on rising, there has been a pronounced fuel scarcity in the country. It will be interesting to note the effect on Turkish production when British coal is again easy to obtain.

The Ionian Bank.

For the year ended August 31 last the profits of the Ionian Bank were slightly below that of the previous twelve months, the figures being £65,059 as against £69,399. It is proposed to maintain the distribution at the previous rate, to transfer £15,000 to the reserve as against £30,000, leaving to be carried forward £15,252 as compared with £13,193. Reference is made in the report to the unsatisfactory business conditions that have prevailed in Egypt, where the bank curtailed its commitments, but outside that region there was a satisfactory expansion in the bank's business.

Trade Competition.

It was amply illustrated in the review of trade with Egypt by Mr. Chapman that it is possible for our traders to do much more than they do in meeting requirements. As a matter of fact, half the explanation of the success of our competitors in the Near East markets is to be found in the fact that they go out of their way to please their potential customers, whereas there is still too much of the "take it or leave it" about the British way. The exchanges are usually blamed by our exporters for their inability to make headway in the Near East markets, but America, who labours under the same disadvantage as we do in that respect, nevertheless manages to develop trade with the Near East and the reason is that Americans have made of trade a fine art. When an inquiry comes they will dispatch immediately a batch of samples for the client to choose from, whereas an inquiry here might only too probably lead to the dispatch of an unsuitable sample, or, what is worse, further correspondence which leads to the business going elsewhere.

NEWS FROM ALL SOURCES.

The gross production of crude oil of the Phœnix group of companies for November was 34,699 tons.

A Royal decree has been signed in Cairo sanctioning the formation of Marconi's Radio Telegraph Company of Egypt.

The twenty-first annual meeting of the Anglo-Belgian Company of Egypt will be held at 8, Crosby Square, London, on December 13 at 2.30 p.m.

Mr. S. S. Davies, the Treasurer of Palestine, has been gazetted Currency Officer in connexion with the introduction of the new currency based on the pound sterling.

Steaua Romana (British) Limited are advised that the production of the Steaua Romana Company, Bucharest, for the month of November was 37,590 tons.

The Rohilkund and Kumaon Railway Company recommends a final dividend of 5 per cent., together with a bonus of 3 per cent. on the Ordinary stock, making 14 per cent.

M. Kosseff, a former Bulgarian Minister plenipotentiary, and M. Kiossevanoff, of the chief Consular section at the Foreign Office in Sofia, have been appointed Bulgarian delegates to negotiate a commercial treaty with Greece.

The Bengal and North-Western Railway Company recommends a final dividend of 6 per cent., together with a bonus of 3 per cent. on the Ordinary stock, making 16 per cent.

The Sentinel Wagon Works, Shrewsbury, have been given a contract, for two double articulated "Sentinel Cammell" steam rail coaches for the Nizam's Guaranteed State Railways.

The traffic receipts of the South Indian Railway Company for the week ended November 6, amounted to Rs.8,38,084, making a total from April 1 Rs. 3,13,68,439. For the corresponding periods of the previous year the totals were Rs.9,76,031 and Rs.3,20,55,301.

The 25th anniversary was celebrated in Jerusalem on November 30 of the foundation of the Jewish National Fund, which has raised £2,000,000 to buy land in Palestine as the inalienable property of the Jewish nation, to be cultivated by hereditary leaseholders.

The British National Committee of the International Chamber of Commerce has decided to call a meeting of all important British industrial and commercial organizations on January 19, in view of the arrangements that are now being made for a World Economic Conference next May and also of other important meetings.

The new standard-gauge railway which has taken the place of the old narrow-gauge line between Luxor and Assouan was opened on December 3 when two trains conveying the representative of the King of Egypt, the Prime Minister, Adly Pasha Yeghen, members of the Diplomatic Corps and of the Cabinet, and many Egyptian and foreign notables, were run straight through from Cairo to Assouan.

Under the Traders' Licence and Taxation of Business Profits Ordinance of the Sudan, which is operative from January 1, 1927, an annual licence at a fee of £E1 is to be obtained by every trader who for himself or on behalf of any other person is carrying on or intends to carry on any business. The Ordinance also imposes a business profit tax varying from 6 per cent. to 10 per cent. on profits of the business of a trader, exceeding £E150. In the case of a partnership or company the assessment is to be made on the profits of the business as a whole. The Ordinance makes provision for traders liable to tax in a country other than the Sudan.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, December 7.

The Stock Exchange has pased a rather depressing week, the adverse influence of events in China having been reinforced towards the end of the week by selling orders from Paris. In addition, a further fall in the price of rubber has produced a slump in rubber share prices, while cuts in dividends, amongst which may be mentioned that of the Bleacher's Association, have served to depress various sections of the industrial market; nervousness in regard to the final dividends as the end of the year approaches has produced a relapse in Home rails. Altogether the condition of the Stock Markets is very different to that which one would have expected at the conclusion of the seven months' coal dispute. Moreover, there seems little to justify hopes of an improvement in the immediate future, for the full effects of the coal stoppage upon British industry have yet to be revealed. On the other hand, if the longer view be taken, there is room for optimism, and the next few weeks should afford the genuine investor some useful opportunities to obtain good investments at a satisfactory price.

French Bondholders.

At the moment the French Government has its hands full with the problem of the stabilisation of the franc and the setting of its finances in order. British holders of the French bonds issued in this country during the War cannot therefore hope for any immediate redress for the heavy depreciation both in their capital and income owing to the present position of the franc. At the same time, the appointment of a Committe to safeguard the interests of the British holders of French War bonds is a well-advised step. At a public meeting held on December 1 in London, the Rt. Hon. Edward Shortt, K.C., stated that the provisional committee had received the names of over 10,000 stockholders who were interested, and subscriptions to meet publicity and other expenses had been received from holders representing a capital of over £4,000,000. It is, of course, admitted that the French Government is under no legal obligation to restore the sterling value of the principal and interest of the bonds. But there are strong claims on the grounds of equity, and were the Committee successful in securing some kind of redress the effect upon French credit would be entirely beneficial. As we have said, at the present moment the French Treasury has still more pressing problems to tackle, but it is none the less fitting that a representative body should be in being to protect the interests of the bondholders concerned. It is understood that a scheme for definite action is to be formulated and that the moral obligation of a borrowing country to maintain the value of its debts to foreign investors is to be pressed home. The offices of the committee are at 15, King Street, St. James's, S.W.1.

London Electricity Shares.

Before the end of the current year all the London Electricity Supply companies have to publish their intentions in regard to the capitalisation of reserves and the distribution of bonus shares. Six companies have already done this, but announcements have yet to come from five concerns. The statements already made have not been uniformly successful. Under the London Electricity Supply Acts of 1925 the standard dividends were put at 10 per cent. on old shares and 7 per cent. on new shares up to 1931 and thereafter at 7 per cent. on all ordinary capital. It is generally anticipated that the companies will choose to pay on this scale, though they have the right under certain conditions to pay the same dividend as in 1922, except on bonus shares, until 1931. Considerable uncertainty thus arises in connexion with yields during the next five years, so that it is doubtful whether there will be any marked expansion in the near future of investment interest in the shares.

Chinese Bonds.

Current events in China are naturally causing a considerable amount of uneasiness among holders of Chinese securities in this country, and prices have fallen substantially during the past week or two. Undoubtedly the situation in China is confused and threatening so that a measure of apprehension is possibly not groundless. British investors are chiefly interested in loans secured on the Customs and the Salt Gabelle, or on the revenue of the railways. The two first are the better secured loans, since the service is under foreign supervision. Of these the Customs loans are the better secured. The Customs revenue is mainly collected at the Treaty Ports and within a short distance of them, the funds being paid into certain specified banks for the account of the stockholders. The Salt Gabelle, on the other hand, is collected in many parts of the provinces, with the result that much of the tax disappears on its way to the Salt Administration. Provided the taxes can be collected under foreign control the loans secured on the Customs are regarded as reasonably safe; but whether the present system of collection will in any way be modified is outside the realms of reasonable forecast.

As regards the railway securities, the position is distinctly less satisfactory. For the most part, European control has ceased and the railways are mainly in the hands of the military. The majority of them have, in consequence, defaulted on their loan coupons, while tracks, rolling stock, etc., have seriously deteriorated. What will be the outcome of the present chaos defies European analysis, but a careful watching of the situation is preferable to a policy of panic so far as Chinese investments of the better classes are concerned. The present turmoil is alarming but China in the past has emerged from many turmoils.

The Imperial Bank of Persia announces an interim dividend for the half-year ended September 20, 1926, at 4s. per share, free of tax, payable December 18.

Sir Henry Edward Stoker, K.C.S.I., of Brunswick Gardens, Kensington, member of the Council of the Government of Madras, 1888-1893, who died on October 20, left property of the value of £6,039.

The export of refined oil products from Roumania for the current year up to September 30, amounted to 1,041,780 tons, comprising 295,450 tons of petrol, 355,266 tons of lamp oil,, 26,935 tons of lubricating oil, and 364,129 tons of fuel oil.

Tewfik Kiamil Bey, deputy for Constantinople, has introduced a Bill in the National Assembly in Angora permitting foreigners to opt for Turkish nationality after five years' residence in Turkey, and enacting that all children born to foreign subjects on Turkish soil shall automatically become Turkish subjects.

THE PRODUCTION OF COAL IN TURKEY.

As in every other coal-producing country the prolonged strike here has had its effects in Turkey. In the following survey of coal production in Turkey, based on an article in a Constantinople publication, the output for approximately the first nine months of this year is given as 817,944 tons as compared with the maximum production for twelve months for the previous two years of 769,073 tons.

The Turkish Black Sea coal basin at present under exploitation is 170 kilometres in length, with an average width of 50 klm. Production has been greatly hampered by the fact that the coal area is in the hands of a large number of concession holders, the majority of whom have not sufficient capital to purchase plant, with the result that they either sell or hire out their concession, or proceed on such elementary lines that a large proportion of the coal available is never reached.

The most important group in the coal basin is the French company, the "Société d'Héraclée," which has an annual output of about 300,000 tons, but apart from the area exploited by this concern conditions in the rest of the area are chaotic. It is considered that no great increase in the annual production can be effected until the system of exploitation has been radically modified and the development of the area taken out of the hands of the existing swarm of concessionaires and placed under the control of adequately equipped coal-mining companies.

The maximum annual output of the Héraclée-Zoungouldak coal basin before the War was 903,739 tons, this being the output in 1911. The output of recent years has been as follows:—1924, 769,073 tons; 1925, 745,212 tons; January 1 to September 26, 1926, 817,944 tons. The total output for 1926 is estimated to reach 950,000 tons.

The normal annual consumption of coal in Turkey is estimated at 630,000 tons, but with the increase in the size of the Turkish merchant fleet, as a result of the reservation of cabotage to the national flag, and the development of local industries, the interior consumption of coal has now risen to 700,000 tons annually. Should production in 1926 be maintained at its present level there should therefore be an annual surplus of 250,000 tons available for foreign shipping or for export. The maximum quantity that can be supplied to vessels at Zoungouldak is 3,000 tons per diem.

Owing to the lack of systematic control on the amount of coal supplied as bunkers to foreign vessels or exported the quantity available for native shipping, industries, and domestic consumption has been insufficient, and this scarcity has of course been accentuated by the cessation of supplies from the United Kingdom. The price of Turkish washed coal delivered to bunkers has now risen to 75s. per ton, whilst the price for domestic consumption is £T40 (about 84s. per ton).

The scarcity of labour in the mines is a serious handicap to their development. The number of miners required on a whole time basis is at least 20,000, but in actual fact only a small proportion of the labour engaged is permanently employed in the mines, as the local labourers regard mining as secondary to agriculture and will only work in the mines when not required on their farms. The result is that the mining population is rarely greater than 7,000, composed principally of farm labourers who, after about a month's work in the mines, return to their farms for anything up to six months. In these circumstances it is improbable that any steady increase in production can be effected unless the mines are assured of adequate labour.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.
(Particulars of tenders marked L.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

THE SUDAN.

Oil Tank.—The Inspector-General, Egyptian Irrigation Service in the Sudan, Khartoum, invites tenders for the supply of an oil tank required for the Upper Nile Division. January 31. (D.O.T.)

EGYPT.

Surgical Instruments.—The Director of Stores, Public Health Department, Cairo, invites tenders for the supply of surgical instruments for the period of one year commencing April 1, 1927. February 12.

BULGARIA.

Screw Bolts and Dog Spikes.—The Bulgarian State Railways invite tenders for the supply of 97.808 tons of screw bolts and dog spikes of various types for the maintenance of the Bulgarian State Railways. Delivery to be made franco embankment or platform at the Bulgarian Black Sea or Danubian harbours which are connected by rail with the State Railway main lines, or at one of the stations of the Bulgarian S.R. Term for delivery is five months. December 21. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, December 22). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Imani for Port Said, Colombo, Madras, and Calcutta (London, December 11); s.s. Maimyo for Port Said, Colombo, Madras, and Calcutta (London, December 24).

Bibby Line—S.s. Oxfordshire for Port Said, Colombo, and Rangoon (Birkenhead, December 15).

British India Line.—S.s. Rohna for Bombay and Karachi (London, December 11); s.s. Mundra for Colombo, Madras, and Calcutta (London, December 18).

Cunard Line.—S.s. Tyria for Casablanca, Gibraltar, Malta, Corfu, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Glasgow and Swansea, December 10); s.s. Pavia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Venice, Trieste, and Fiume, also Ancona if inducement (Liverpool December 24, Swansea December 28).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 22).

P. and O. Line.—S.s. Nankin for Colombo, Madras, and Calcutta (London, December 11); s.s. Kaisar-i-Hind for Bombay (London, December 17); s.s. Razmak for Bombay (London, December 31).

Prince Line.—S.s. Algerian Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (Manchester, December 21).

Ellerman and Papayanni Lines.—S.s. City of Lancaster for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 11); s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 22); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 31); s.s. Assyrian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 1); s.s. Grodno for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume (Liverpool January 8, Swansea January 11); s.s. Bavarian for Algiers, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 22). * Subject to sufficient inducement. Transhipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

IRRIGATION IN INDIA.*

(*Continued from page 653.*)

Colonisation commenced in 1892, and the earlier colonists had an even harder time than on the Sidhnai system. There was no railway, and they had to walk through a country nearly as waste as that to which they were going. The same opposition was met with from the indigenous nomads, and many prospective settlers, refusing to believe that the land was worth cultivating, returned to their homes. Cholera also created havoc, but although those who persevered were rewarded by an excellent crop, their troubles were not over. There was insufficient labour to harvest the crops, and difficulties were encountered in disposing of what could be reaped, as all surplus produce had to be carried along the same perilous way by which the settlers came. This was, however, only a transitory phase, as news of the fertility of the soil and the magnificent crops spread quickly over the Province, and the principal difficulty became the selection of desirable settlers from the thousands of applicants. Roads and railways came rapidly into being, towns and factories sprang up, and in 10 years the population rose from 8,000 to 800,000. The capital cost was just under £2,500,000, which yields a return of 45 per cent. per annum, while the value of the crops in the year 1919-20 was no less than £12,000,000.

It is impossible to describe the many other works, some of great magnitude, which have converted so many millions of acres of India into land yielding large and certain crops, but it is equally impossible to leave out two works in which engineering skill of the highest order has been displayed.

The Periyar project in Madras is a remarkable instance of directing the resources of Nature to the service of mankind. The Periyar River rises in unsurveyed country in the Western "Ghats" in Travancore, and flows through uninhabited jungle westwards to the Arabian Sea, while the country lying east of the "Ghats" was in a continual state of famine. Across a steep V-shaped gorge, some 3,000 feet above sea level, in the middle of almost impenetrable malaria-ridden jungle, a concrete and masonry dam has been constructed under difficulties, both engineering and climatic, never before encountered. The height of the dam is 173 feet above the river bed. Its length at foundation level is only 200 feet, increasing to 1,240 feet at the crest. Nearly 50 feet below crest-level a channel is led through a deep cutting for over 1 mile towards the summit of the range, and through the summit a tunnel over a mile long has been bored, carrying the waters into the eastern watershed where they are led into the River Vaigai. A weir across this river, nearly 100 miles lower down, gives access to the Periyar Canal, with 250 miles of main canal and distributaries.

The difficulties experienced on this work were enormous. The nearest railway station was 90 miles away. Rainfall from June to November was practically continuous, and at other times sudden floods, rising to 120,000 cubic feet a second, were frequent. There was no possibility of diverting the river from the gorge, so that every flood had to be passed over the unfinished work. Labour was difficult to obtain, and far more difficult to keep, owing to the unhealthiness of the district. In June, 1895, the hospital attendances reached the appalling figure of 1,465 per thousand labourers employed.

The total quantity of water impounded to crest-level is 15,660 million cubic feet, and of this quantity, owing to the wedge shape of the gorge, over 9,000 million cubic feet can be utilised, being above the outlet level. By this work a river ordained by Nature to flow into the Arabian Sea has been led across the Peninsula into the Bay of Bengal, irrigating in its way some 100,000 acres of land.

The Triple Canals Project in the Punjab is the largest irrigation work yet completed in India, and is a striking monument not only to the engineering skill of those entrusted with the design and execution of the work, but also to the far-sightedness of the originators of the scheme. The main object was the irrigation of a tract known as the Lower Bari Doab, between the Ravi and the Sutlej, and as the winter waters of the Ravi were already fully utilised by the Upper Bari Doab Canal, the Sutlej seemed to be the natural source of supply. A scheme for a canal from this river was actually formulated, but it was strongly opposed by the Settlement Commissioner, Sir James Wilson, and by Colonel Jacob, of Chenab Canal fame, on the grounds that the Sutlej waters would eventually be required for development of irrigation on either side of that river, and that as there was a large supply in the Jhelum in excess of the requirements of the watershed lying between it and the Chenab, this surplus should be utilised for irrigating the Lower Bari Doab.

The investigations required for this scheme were entrusted to Mr. (now Sir) John Benton, who marvellously amplified and improved upon the original proposals by providing for two further very large areas of irrigation between the Jhelum and the Ravi, the first to the east and the second to the west of the Chenab. At Mangla, on the Jelum, a permanent shingle bar obviated the necessity for a weir, and from this place the Upper Jhelum Canal carries the Jhelum waters into the Chenab above the headworks of the Lower Chenab Canal. This Canal is thus fed with Jhelum water, and the Chenab water so set free is taken at Merala, 36 miles farther up the river, into the second link of the Triple system, the Upper Chenab Canal.

In the surmounting of engineering difficulties the construction of the Upper Jhelum Canal was exceptional. The natural weir rises 69 feet above the canal bottom, and the canal, with a bed width of 220 feet, runs for the first 1,500 feet through the "Mangla Cut," which has a maximum depth of 110 feet of excavation. For over 60 miles it follows along the slopes of the Pabbi hills, passing in quick succession through deep cuttings and over high embankments, crossing no less than sixty drainages from these hills. In the case of the large crossing of the Suketar the canal is taken into the torrent bed, where a barrage, 1,600 feet long, fitted with thirty-three bays of 40-foot lift gates through which floods can be passed, directs the water to the farther side, and it is readmitted

* From the review of engineering in India given at the opening meeting of the Institution of Civil Engineers by the President, Mr. Frederick Palmer, of the firm of Messrs. Rendel, Palmer, and Tritton.

into the canal through a regulator with seventeen bays of 20 feet. The works in this canal include 50 million cubic yards of earthwork and 1,250,000 cubic yards of concrete and masonry.

Following a course almost due south, the Upper Chenab Canal throws out a branch to the right and to the left, and eventually crosses the Ravi 120 miles from Merala. The crossing of the Ravi at Balloki by means of a level crossing, is an enormous work. There is a barrage 1,650 feet long, with thirty-five gates of 40 feet, to pass the Ravi discharge of 150,000 cubic feet a second, and, on the left bank, a regulator having fifteen bays of 20 feet forms the headworks of the Lower Bari Doab Canal, the third system of the project. At the crossing, the Ravi river is paved with an impervious floor, stretching for over 700 feet upstream and 110 feet downstream.

The project was sanctioned in 1905, and in originality of conception and design, and the boldness and magnitude of the works undertaken, the Triple Canals rank as one of the finest engineering works in the world. Each section was opened as it was practically finished, the first in 1912, the third in 1913, and the second in 1915, but the whole work was not completed until 1917. There are 433 miles of main canals and branches, 3,010 miles of distributaries, and nearly 20,000 miles of watercourses, irrigating 1,750,000 acres out of a total area commanded of almost 4 million acres, or 6,250 square miles, of which 1,570,000 acres (some 2,500 square miles) was waste land. From Mangla on the Jhelum to the southern extremity of the Lower Bari Doab is a distance of nearly 500 miles.

The total cost was about 8 millions sterling, and, besides the vast indirect benefit resulting from the scheme, a direct return of 8 per cent. on capital will be obtained when the lands are fully settled. For the purpose of comparison, it should be mentioned that, owing to the cheapness of labour in India before the War, the cost of works was only about one-third of the cost of similar work in this country.

Of the many works in progress, space only permits of briefly mentioning four. The dam across the Pravara at Bhandardara, in the Bombay Presidency, will be 270 feet high and impound about 13,000 million cubic feet of water. The Bhatgarh dam, also in the Bombay Presidency, will be 190 feet high and more than a mile long at the crest, impounding over 24,000 million cubic feet of water. The Sind Canals works include a barrage across the Indus at Sukkur 4,725 feet long, with sixty-six spans of 60 feet, each supporting a shutter of that length, and 18½ feet high. The canals will carry a maximum discharge of nearly 50,000 cubic feet a second, and will command an area of 7,500,000 acres (12,000 square miles), of which the annual irrigation of 5,333,000 acres (8,000 square miles), mostly barren desert at present, is anticipated. The capital cost is estimated at £14,000,000, and the net return at 10 per cent. per annum.

The Sutlej Valley project is the direct outcome of the Triple Canals scheme. As has been mentioned in the description of the latter, the waters of the Sutlej were to be conserved for irrigation on both sides of this river. The whole project consists of four weirs, three on the Sutlej and one on the Panjnad (as the river is called below its junction with the Chenab), with twelve canals taking off above them, irrigating annually 5,100,000 acres, or nearly 8,000 square miles. Of this area two-fifths will be in British territory and three-fifths in Indian States. The area to be served is almost three times as great as that in the Triple Canals scheme.

The cost is estimated at £11,000,000, and a net return of 12 per cent. is expected from water-rates alone. The principal virtue of the project, however, lies in the fact that 3,750,000 acres (5,500 square miles) of land, at present desert waste, will be brought under cultivation, and, including the enhancement in land value, the return on the project will amount to 38 per cent. per annum.

With the large number of works already completed, the projects under construction, and those which will follow in a brief space of time, the total area commanded may easily amount to 120,000 square miles, and the actual irrigation each year to 80,000 square miles—an area almost equal to that of Great Britain.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows under date November 30:—

Currants.—During this month the improvement which commenced in October was well maintained, and towards its close the market generally developed strength, the main influence contributing to the rise being the firmness of the Greek market, owing to shortage of supplies at the producing centres, confirming the estimates of a considerable shrinkage of the harvest, in comparison with previous seasons. Buyers have not shown any great inclination to add to their stocks beyond actual requirements, which is surprising as there is no good reason why they should be over-cautious. Certainly the coal strike is coming to an end in a less satisfactory way than was hoped for at one time, but the trade generally is carrying very small stocks, and as the industrial position improves some revival should follow. It is too late to see any volume of business before Christmas, but the end of January should see trade in full swing.

Trading on the whole, considering the conditions under which we have been working, must be considered highly satisfactory, and there is no doubt that had it not been for the labour trouble, the rising markets in Greece might have produced a period of great activity. Business afloat of cleaned Pyrgos has been one of the features, 28s. 9d. to 30s. c.i.f. being paid. Spot sales were 24s. to 35s.; Patras rising from 34s. to 37s., Zante 34s. 9d. to 37s., other growths firm without any appreciable advance, Gulf 38s. 6d. to 42s., and speciality shade dried varieties 44s. to 50s. Vostizza 46s. 6d. to 50s., fine 56s. to 62s. Closing quotations:—Pyrgos, 35s. to 36s.; Amalias, 36s. to 36s. 6d.; Patras, 36s. to 37s.; Zante, 36s. to 37s.; Gulf, 38s. 6d. to 42s.; Panariti, 44s. to 50s.; Vostizza, 42s. to 62s.

Sultanas.—Compared with October, there has been a big falling off in the amount of business done, but the firm tone of the Smyrna market has kept prices from slipping away, and although some slight concessions in value have been made, the month closes with a firm undertone. Sales.—Smyrna ordinary, 62s. to 64s.: fair to good, 66s. to 70s.: ne, 80s. to 87s. Greeks, 64s. to 85s.; Cretan, 66s. to 87s.

Figs.—Skeleton cases have been in active request, prices moving up for all classes, Layers, large boxes, 66s. to 80s.; small boxes, 75s. to 85s.; packets, 72s. 6d. to 75s.; pulled, 40s. to 47s. 6d. Naturals.—Buyers have received their forward purchases, and this has temporarily filled their requirements, making spot sales slow. Genuine, 33s. to 34s. Good average, 30s. to 31s.

NEW COMPANY.

ORIENTAL INDUSTRIAL MONOPOLIES.

Oriental Industrial Monopolies has been registered as a public company with a nominal capital of £157,500 (150.00 Preferred of £1 and 150,000 Deferred of 1s.), to acquire shares, stocks, Debentures, and securities of any company constituted or carrying on business in Turkey or elsewhere. The directors are: P. Motet, A. G. Gibson and E. J. Wilson. The registered office is at 67, Basinghall Street, E. C.2.

The Yugoslav Ministry of Posts and Telegraphs has issued an order to the effect that from January 1 next the rate of the dinar for exchanges purposes will be 12 dinars equals 1 gold franc, in place of the existing ratio of 15 to 1.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended December 1:—

Egyptian Futures.—Sakel Contract.—From the date of our last report to the week-end, the general position in this market showed little change, prices hardening a few points on a limited amount of "short" covering and Continental buying. On Monday, the market began to come under more pressure, probably owing to anticipations of a large tender on the following day; expectations in this respect were fully realised, as yesterday 104 dockets were circulated. The main portion of the tender appears to have been taken up by firms acting on Alexandria account, and whilst the weight of cotton placed against the contract has certainly unsettled the market for the time being, it yet remains to be seen whether the influence exercised is going to be of a transitory or permanent character. In our opinion, the most important point overshadowing the position at the moment is the meagre demand experienced for fine cottons from the local trade. On the present basis of the raw material we believe that yarn margins in the medium fine Sakel counts show the producer an actual working loss, and, therefore, it is no wonder that machinery is turning over to the cheaper substitutes, which, whilst undoubtedly being inferior in quality are in demand and yield the spinner a working margin. It is noticeable that recently a good deal of the downscale buying support has been withdrawn, and as the open short interest has been much reduced during the past month or six weeks, the market will be particularly vulnerable to any additional pressure that may be encountered, either through the weight of the crop movement or outside factors.

As a result of the comparative weakness of our market during the past two days, the Egyptian/American straddle has closed in about ¼d. per lb. Whilst we would not like to dissuade those who have now a reasonable profit, we are rather of the opinion that unless a distinct revival in the trade demand takes place a further closing-in will be forced. Relatively, the decline in the Alexandria market has been more accentuated than the movement at this side. With regard to the future movement of the market, we think it is quite likely that a further easing will take place. However, as prices have now worked down to a rather unattractive level for fresh "short" commitments, we would prefer to advise a waiting policy at the moment with a view to entering the market on the "long" side should the position develop any material weakness.

Upper Contract.—This contract has been under pressure for the greater part of the week, mainly owing to the fact that we have latterly established a reasonable shipping parity over Alexandria, and on this account have attracted a fair amount of hedging orders. In addition to this, the recent decline in the American market has rather undermined confidence. The trade demand for Uppers, Zagora and Pilion, the cottons covered by this option, has not been altogether satisfactory, and it would appear as if in many cases spinners who anticipated a distinct trade revival on the settlement of the coal dispute, are now regretting their premature purchases. Prices may show further declines in the near future, but should any material break be witnessed, we think moderate commitments on the "long" side would ultimately prove profitable.

Egyptian Spot.—Business in this department has been quiet and featureless, and prices have displayed a sagging tendency, both for Sakel and Uppers. The much-discussed and long-expected tender of Sudan Sakel took place yesterday, and contrary to the expectation of many, the market stood up to it very well, the November position expiring at 40 points over January. Owing to the wasty nature of much of this year's Sakel, as exemplified by recent shipments (in contrast to earlier ones which indicated that the staple was of a more attractive character), spinners have been showing more interest in this Sudan cotton of late, and it is probable that the "takers up" of this growth will have little difficulty in disposing of their stock at a satisfactory basis. The local inquiry has been poor and buyers have been for the most part in a very small way. The forwardings to spinners last week-end were returned as 11,216 bales, the highest figure we have seen for some time, and with fresh shipments arriving each week it is obvious that the piecing up style of business, upon which the spot market here has had to rely chiefly during the past three or four months, must of necessity show a decrease. The finer grades have been almost entirely neglected and some increase in the demand for inferior qualities has been noticed. Sakel, pass to 100 on, and Upper 9½d. to 10½d., have, perhaps, attracted the bulk of the inquiry. A very small trade has been done in Sudan cotton in view of the approaching tender. C.i.f. business has been variable and patchy. Estimated sales 700 bales Egyptian and 250 Sudan. Quotations of Sakel have been reduced 45 points, and those of Uppers 55 points on the week. F.G.F. Sakel to-day 14.30d. F.G.F. Upper to-day 9.65d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended November 25 state:—

Since our last report the market has been fairly steady but the undertone is somewhat weak. The week's summary of price movements is as follows:—Sakellaridis: January, 25.80 dollars, 0.54 dollars down; March, 25.86 dollars, 0.46 dollars down; May, 26.08 dollars, 0.37 dollars down; November, 1927, 26.73 dollars, 0.03 dollars

up. Ashmouni: December, 16.98 dollars, 0.56 dollars down; February, 17.37 dollars, 0.43 dollars down; April, 17.67 dollars, 0.33 dollars down; June, 17.97 dollars, 0.13 dollars down; October, 1927, 18.42 dollars, 0.25 dollars down.

Sakel.—The market at the commencement of the week was rather firm, but the publication of the American Bureau Report giving 18,399,000 bales as the estimated production of American cotton against an estimate of 17,918,000 bales a fortnight ago and 15,298,000 bales last year produced a feeling of depression, and prices have since declined so that the market closed to-day at about the lowest of the week. Another factor contributing to the falling away of prices is the fact that, despite the more favourable prospects at the end of last week for a speedy settlement of the coal strike in England, that unfortunate trade dispute still drags on. The demand from abroad continues to be relatively good, both from England and the Continent; on the hand, American spinners for the time being show no interest at all in Sakel.

November maintained its premium over January up to the last trading day, the 22nd inst.; on that day, however, this premium rapidly disappeared as a result of a large quantity of cotton bought by the export houses during the summer from growers and up-country merchants, so that November ultimately went out at 15 points discount under January. Dockets for 750 kantars were issued the third November tender day; the total of the November tenders is 1,000 kantars.

Uppers.—Fluctuations in the prices of this variety have, more or less, followed in the wake of Sakel. The demand from abroad continues to be rather good. The maintenance of the premiums on the distant months is a fair indication that spinners find present Ashmouni prices reasonable enough to justify purchases of their whole year's requirements.

The week's receipts amount to 379,180 kantars against exports 240,554 kantars; the stock in Alexandria stands at 2,574,187 kantars. The official figures of arrivals and exports for the period September 1, 1926, to November 18, 1926, are as follows:—Arrivals: Lower Egypt, 1,439,000 kantars; Upper Egypt, 1,244,000 kantars; total, 2,683,000 kantars. Exports: Sakel, 516,[illegible] kantars; Ashmouni, 798,933 kantars; Various, 79,5[illegible]5 kantars; total, 1,394,944 kantars.

Spot: During the past week we have had active markets and a good business has been done. Spinners' demand continues on about the same scale as last week. Sales amount to about 27,900 bales, of which we estimate 11,600 bales Sakellaridis, 15,000 bales Ashmouni and Zagora, 950 bales Pilion, 350 bales White and a few bales of the Brown varieties.

Sakellaridis: Has met with a good demand and all styles have been inquired for. With the exception of Good and better, which are distinctly dearer, spot differences show little change from last week.

Ashmouni and Zagora: Zagora is more or less neglected, but Ashmouni continues in good favour with buyers and a good business has been done covering all grades. The medium qualities still absorb the majority of the demand. Spot differences are generally without much change.

Pilion: Once again has met with a good demand, chiefly for the higher grades. Spot differences have eased a little.

Brown, etc.—A retail business has been done. Spot differences are slightly easier.

White: A fairly good business has been done, mainly in Casulli and other extra-staple varieties. For the better grades of Casulli spot differences have improved a little, but there is not much change in the other qualities.

Up-Country: Work up-country is going on normally. The factories are well supplied with cotton and in some districts are working day and night. Extra-stapled crops from good districts continue in demand and very full prices have to be paid. The draft law for the restriction of the acreage during 1927, 1928, and 1929 has been submitted to Parliament and a special committee has been appointed to examine it.

TEXTILES.

IF you are dealing in Textile goods, you will be well advised to try K. JEBARA, 52, Princess Street, Manchester. (Established 1887).

COMPANY NOTES AND REPORTS.

P. AND O.

The report of the Peninsular and Oriental Steam Navigation Company for the year ended September 30 last states that after providing for depreciation there is a credit balance on the year's accounts, including £142,143 4s. brought forward from last year, of £919,096 6s. 3d. against £955,002 10s. in the previous year. The directors propose to deal with this amount as follows:—(1) 5 per cent. dividend on the preferred stock (of which 2½ per cent. was paid as interim dividend), £152,000; (2) 10 per cent. dividend on the deferred stock, free of income tax (of which 5 per cent. was paid as an interim dividend), £359,251 16s.; (3) reserve for redemption of debenture stock, £274,687 17s. 6d.; (4) to carry forward to next year, £133,156 12s. 9d.—£919,096 6s. 3d.

The poor state of trade generally, the unrest in China, and the loss caused by the labour troubles in Australia compelled the board a year ago to recommend a reduction in the dividend on the deferred stock from 12 per cent. to 10 per cent. per annum, and this year, thanks to the conservative policy hitherto adopted, and not to the profits made, the directors are prepared to propose 10 per cent. per annum on the deferred stock for the year just ended.

The sinking fund for the debenture stock of £7,000,000 repayable at the company's option between 1930 and 1940 now stands at £968,445 7s. 6d., and this, together with interest as earned, is invested in Government securities. If the directors are in a position to add to the sinking fund as they have hitherto done there should be sufficient in hand by 1940 to pay off the whole £7,000,000.

The Nore and the Dongola have been sold at prices considerably in excess of their book values, and the difference has been passed to credit of the depreciation account for the rest of the fleet. The Moldavia has been converted from a coal to an oil burning ship the experience of oil as a fuel in the case of the other vessels having been satisfactory. It is the directors' intention, as soon as possible, to convert the Narkunda and Naldera from coal to oil as the results in working are more uniform and the comfort in additional cleanliness is appreciated by passengers. The Rajputana, mentioned in last year's report as fitting out, was delivered in January this year, and she is proving herself as suitable for the Indian mail and passenger service, as her sister ships of the "R" class. All these vessels are favourites with the travelling public. The Ranchi during the summer trade made six cruising voyages to the Mediterranean and North Sea ports, and the results have induced the directors to place her again in this service next year. The Assaye has again been chartered for Indian trooping.

The general strike, which started on May 4 last, although called off less than a fortnight later, and the coal strike, which has continued for over six months, seriously affected the earnings. The "unofficial" strike of Australian seamen, to which reference was made in the last report, caused great loss to the branch line.

As to the future, there is an expectation of a good season in Australia, but the drought in large areas in Central Queensland will have the effect of reducing to some extent the produce available for export from that Colony. The company's business in China during the period under review has been greatly interfered with. It is considered, however, that things will improve before long. Business in Japan is approaching normal and that in the Straits has been better than in recent years. With respect to the company's Indian affairs, the past year has

Digitized by Google

been one of great difficulty, and freights from Bombay have sometimes been as low as 5s. a ton. The outlook now, however, is brighter. The forecast there is that the crops generally will be in advance of the average. In conjunction with the Great Indian Peninsula and the East India Railway the company has established a train service de luxe between Bombay and Calcutta and vice versa, which will be an advantage to the company's Calcutta and up-country passengers.

IONIAN BANK.

The report of the Ionian Bank Ltd. for the year ended August 31, 1926 shows that the profits (provision having been made for the expenses of management, losses, all bad and doubtful debts, bonus for staff, rates, taxes, corporation profits tax, and income-tax at branches in England) amount to £65,059; add balance brought forward, £13,193, making £78,252. An interim dividend at 3s. per share free of tax, was paid on June 1, leaving £60,252. The directors propose a final dividend at 3s. per share, free of tax, and a bonus at 2s. per share, free of tax, and transfering to reserve (making £235,000) £15,000 leaving to be carried forward, £15,252. In view of the unsatisfactory business conditions in Egypt, the directors found it advisable materially to curtail commitments in that country during the year. The report, however, states that elsewhere the bank's business has continued to show satisfactory expansion.

Messrs. Vickers Ltd., have received an order from the British Admiralty for the construction of three submarines.

The Anglo-Persian Oil Company Ltd., has placed orders for nine new oil tankers in British yards. This order is in addition to nine ships previously ordered by the company this year. Seven of the new tankers will have a deadweight of over 10,000 tons, while the other two ships will be of 6,400 tons deadweight each. The orders placed during the year represent an addition of approximately 170,000 tons to the deadweight of the Anglo-Persian Company's fleet, giving a total of over 700,000 tons. Three of the new vessels are to be built by Messrs. Palmers Shipbuilding and Iron Co., one by Messrs. Swan, Hunter, and Wigham Richardson, two by the Caledon Shipbuilding and Engineering Co., one by the Greenock Dockyard Co., and the two smaller tankers by Sir W. G. Armstrong Whitworth, and Co. The seven large vessels are to be Diesel-driven.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Yugoslav Ministerial Crisis.

The resignation last week of Dr. Nintchitch, Foreign Secretary, was followed immediately by that of the whole Yugoslav Cabinet. There was, however, little connexion between the two resignations, or rather between the causes that brought about the two actions almost simultaneously. Dr. Nintchitch has declared that it was for the purpose of attracting the attention of Europe to the importance of the Treaty of Tirana that he had surrendered control of Yugoslav foreign policy. M. Ouzounovitch, on the other hand, had to admit that his resignation was due to the impossibility of carrying on the administration with a Radical-Raditchist Coalition in the face of the constant interference of M. Raditch in the work of the Cabinet and the Skupshtina, and of his attacks on the domestic and foreign policy of the Government. Reflection, it is to be hoped, will enable public opinion in Yugoslavia to regard the treaty between Italy and Albania more dispassionately than was possible on the receipt of the news. Whether the gravity of the Ministerial crisis has been intensified by the sudden death of M. Pashitch, or has been lessened, remains to be seen. So long as he lived the Radical Party could be relied upon to follow his standard; its solidarity under another leader is more problematical. With the existing distribution of seats among the different parties a coalition Government was necessary. The combination with the Raditchists had been M. Pashitch's work, and at the time appeared to represent a stroke of genius on the part of an old parliamentary hand. In practice, however, the temporary union of the two parties was not a success, owing mainly to the erratic behaviour of M. Raditch. It is possible that the death of M. Pashitch may bring an early explanation of the Raditch enigma. The reports of his actions and speeches as circulated abroad seem wholly incompatible with the fact that he is still at large in his own country and has a compact Parliamentary following behind him. Amid many vagaries, however, he has maintained a steady and strongly pressed attack on alleged corruption in official circles. In the end the attack centred on M. Pashitch's son, and the embarrassment of the Government under M. Raditch's lash was increased. The withdrawal of M. Pashitch from office brought little or no respite, but it is possible that his death will free the Radical Party from an awkward situation, unless indeed, having accomplished his end, M. Raditch is able to convince his King and his countrymen that his irresponsibility was a pose, and to make a bid for power.

The Late M. Pashitch.

Any estimate of the late M. Pashitch must necessarily be coloured by the medium through which the subject is viewed. Judged by Western arm-chair standards, much in his career will not receive approbation—the method of dealing with the Black Hand conspiracy, his dragooning of Montenegro, his autocratic methods during the latter years of his life. M. Pashitch, however, was a product of the Balkans, born in the middle of the last century. He was once condemned to death, and on a second occasion sentenced to five years' imprisonment on the flimsiest of charges trumped up by political opponents. In the eyes of his countrymen he was the founder of Yugoslavia, the Grand Old Man of Serbia, whose virile patriotism and unshakable determination had helped his country to triumph over all obstacles and to win through after the direst disaster. His reputation might have stood higher, if he had been spared the ordeal of the post-War years. He was too old to adjust his rigid Serbian point of view to the requirements of his fellow-nationals of Croatia and Slavonia, and the unity of the Southern Slavs, which had been one portion of his life work, proved to have been achieved in the Statute Book of the country rather than in the hearts of the three peoples. The name of Pashitch, however, will take its place in the list of the national

Digitized by Google

heroes, and his example of single-minded devotion to Serbian interests will yet fire many of his countrymen.

The Greek Cabinet.

The new Greek Ministry is receiving an early test of its strength and solidarity in connexion with the fate of General Othonaios, until recently Commander of the Third Army Corps at Salonika. General Othonaios has played a prominent part in the events of the last few years in Greece; in particular he was President of the Court Martial that condemned to death the five Ministers and the Commander-in-Chief of the Greek Army in Asia Minor in 1922. When the Royalists, on entering the coalition, waived their claim for the formal rehabilitation of the reputations of the executed men, it was agreed that General Othonaios should be one of those to be retired from the Army. He was recalled from Salonika to Athens, and the republican element in the Ministry endeavoured to secure relief from an embarrassing task by urging General Othonaios to resign. The General refused and his dismissal has, therefore, to be carried out. In the meantime, however, a number of officers have intimated to the Government that General Othonaios' dismissal will be regarded as an affront to the Army. As one of the first items of the Government's programme is the purging of the Services with a view to eliminating both politically-minded officers and incompetents, the outlook is not promising. If M. Zaimis's Ministry, however, is unable to effect the required reform of the Army, it is difficult to see how any Government will acquire the necessary strength. A stand against military interference in politics must be made now, if ever, and it is to be hoped that the politicians forming the Cabinet will realise that their own existence depends upon their taking their courage in both hands. To General Othonaios's credit it may be pointed out that he has already given an undertaking to accept without challenge the Government's ruling.

The Sarayevo Murder.

New light on the murder of the Archduke Francis Ferdinand at Sarayevo—the immediate cause of the Great War—has been thrown by the former Serbian Minister in Vienna, M. Yoza Yovanovitch, now the leader of the Serbian Agrarians, in the course of a University lecture on the question of responsibility for the War. According to M. Yovanovitch, who is to be distinguished from M. Liuba Yovanovitch, whose "revelations" a short while ago, regarding the knowledge of the pending attempt that had previously reached the Serbian Government, caused some embarrassment, there were two distinct plots against the Archduke. The first was organised by Colonel Dimitriyevitch of the Serbian Black Hand, who had told off five men to carry out the deed. The indiscretion of one of them revealed the plot; all five were arrested at Shabatz, and sent to Belgrade, and the plot came to nothing. Independently of this attempt another conspiracy was set on foot by Major Tankositch with the help of Prinzip. Of this plot, M. Yovanovitch states, the Serbian Government knew nothing until after the murder. At this period, as Serbian Minister to Vienna, he had taken upon himself, on his own initiative, twice to warn the Austro-Hungarian Finance Minister of the danger that the Archduke or any other representative of the Dual Monarchy would run in making a "provocative" visit to Bosnia. No doubt, this new explanation will have to explain other points before it can be accepted as the last word on the subject; for instance, it has generally been admitted that Dimitriyevitch and Tankositch were hand in glove with one another so that "independent" action on the part of the latter would be unlikely. In view of the fact that M. Pashitch has been blamed for not making some reply to M. Liuba Yovanovitch's allegations, it seems a pity that M. Yoza Yovanovitch has not broken silence on the subject before now.

Italy and Albania.

In the absence of any other satisfactory explanation of the recent insurrection in Albania, the root of the trouble may be put down, as suggested in these pages last week, to local discontent. Our Tirana Correspondent, in a letter that we publish in this issue, reflects the general uncertainty regarding the origin of the movement. He points out that the insurgents were armed with rifles not used in Albania, and he is satisfied that the members of the Opposition now in exile took no part in the revolt. Writing from Rome, a correspondent, Major J. S. Barnes, takes up the cudgels on behalf of Italy to repudiate any suggestion that the Italian Government could have had cognizance of the Albanian movement against Ahmed Beg Zogu. At the same time he falls into a similar mistake by taking it for granted that the genesis of the rising must be sought in Yugoslavia. Until conclusive evidence is forthcoming, charges against either Italy or Yugoslavia must be mere guesswork. Major Barnes, however, does confirm indirectly a statement made in these notes on September 9 that most of the political opponents of Ahmed Beg Zogu who had taken refuge in Italy were inclined to make their peace with the President. Mgr. Fan Noli was the chief exception, and it is of interest to learn that he has now been to a considerable extent repudiated by his former followers. The early collapse of the Albanian rising would in any case have tended to place the movement in its proper perspective, and now in the face of the Italo-Albanian Treaty any significance it may have had is completely overshadowed. The importance of the Treaty remains—for Albania lest it be the cause of her being obliged to take sides in European quarrels; for Italy lest it set back the clock in regard to Italo-Yugoslav relations.

OSMAN DIGNA.

The death is announced from Wadi Halfa of Osman Digna, the old rebel against British authority in the Sudan who suffered imprisonment or detention for 25 years. Osman Digna, who was born in 1845, threw in his lot with the Mahdi in 1883, and for the next three years was in conflict with British troops in the Eastern Sudan. As an active force for reaction he ended his career when the Khalifa's forces were defeated at Atbara and Omdurman. It was after that date, however, that he was captured and confined in Damietta. His last years were spent in solitary brooding, although in 1924 he performed the *hajj*.

Sir John Maffey, Governor-General of the Sudan, arrived at Khartoum on December 5, the special train being met by an air escort.

THURSDAY, DECEMBER 16, 1926.

YUGOSLAVIA AND ITALY.

Events in Yugoslavia have followed one another with startling rapidity since the conclusion of the Tirana Treaty between Italy and Albania. Popular excitement in the country led first to the resignation of the Foreign Minister, M. Nintchitch, who on the ground that he had identified himself with the policy of maintaining friendly relations with Italy could urge that, if a scapegoat were necessary, it should be he rather than the whole Government; the following day M. Ouzounovitch tendered the resignation of the Cabinet, and before any solution of the political crisis could be reached came the sudden death of the central figure in Yugoslav politics, the veteran M. Pashitch, around whose person, whether in or out of office, the political life of the country has revolved for so many years. Happening at this precise moment, the death of M. Pashitch introduces a grave complication for an already sorely tried people, for it will be difficult at such a moment to keep the foreign and the domestic issues distinct, and to bring to bear upon both the clear thinking which alone will enable Yugoslavia to rise superior to her difficulties. There can be no doubt that the more important issue of the two is that which concerns the internal political situation, the unity of Serbs, Croats and Slovenes. Although relations with Italy may to some extent impinge upon this situation, there can be no need to introduce into it the latest developments in regard to Albania. The Tirana Treaty stands. If it implied all that Yugoslav fears were at first inclined to read into it, the chief sufferer would be Albania, not Yugoslavia. It would be strange in such an event, if Albanian sufferings could not be turned to Yugoslav advantage. The idea of an "iron ring" should have no special terrors for a country peaceably minded. Yugoslavia herself, unnecessarily as it seemed to many at the time, drew an iron ring round Hungary by means of the Little Entente; but of the three countries comprising the latter she has been the first to drive a hole in the ring by initiating a *rapprochement* between Belgrade and Budapest. The iron ring that Italy is now accused of forging round Yugoslavia, if it exists at all, may well have worn thin to breaking point before many years have passed. In no circumstances can it be as real or as galling as the Little Entente must have been to Hungary. Yet Hungary has survived the ordeal, and it should not prove too great a task for Yugoslav statesmanship to recover in the Balkans the position that is supposed to have been impaired by the Tirana Treaty.

The passing of M. Pashitch must needs be a landmark in the history of Yugoslavia. For nearly forty years he held the central position, first on the Serbian, and then on the Yugoslav stage, and was identified closely with all the outstanding events in the history of the Serbian people during that period. He was the embodiment of the pertinacity of the Serb character that, as a result of the Great War, reached its goal in the union of the Southern Slavs; and during his lifetime it was inevitable that deference should be paid to his commanding position by follower and opponent alike. M. Pashitch, however, had never advanced beyond the narrow limits of a patriotism coloured by party considerations. Invaluable, if not indispensable, as he was in all domestic difficulties—his personal intervention in the political crisis a day or two before his death, after he had withdrawn, as far as was possible for him, fifrom politics, is proof that the Radical party, if not the country as a whole, still looked to him for guidance—there must have been times when the narrowness of his political outlook was a hindrance to his colleagues. Whether the correctness of Yugoslavia's foreign policy of recent years was due to him or to able lieutenants is as yet not clearly established. Under his ægis the policy of friendly relations with Italy was pursued with useful results; but it cannot be said that he took advantage of his special position in the Balkans to hasten the approach of a Balkan understanding. The cloud that overshadowed the closing days of his political career—the charges of corruption against his son—was symptomatic of a sturdy indifference that he assumed towards the more modern conceptions of political and official responsibility. To the vacuum that his withdrawal will have caused it is inevitable that many contending currents will succeed before a settled political atmosphere can be established. During the lifetime of M. Pashitch young Yugoslavia could hope to make only a gradual impression upon the new State. It will now have an opportunity of showing whether it is more qualified than the old school to reconcile the different points of view of Serb, Croat and Slovene, and to unite the genius of the three peoples in joint and harmonious service in the country's interests. No one has known better how to take advantage of weaknesses in the Serbian armour than the irrepressible M. Raditch, whose hold upon his fellow Croats, in the fact of his glaring indiscretions and contradictions, is to the outside world one of the wonders of Yugoslav politics. In so far as political corruption has played into his hands, it should not be difficult to satisfy all sections of the people that the championing of administrative reform is not incompatible with a sane outlook on political affairs and respect for the ordinary amenities of international relations, both of which would seem to be beyond the attainment of M. Raditch.

Yugoslavia, it might be thought, would be well advised to take no hasty action in the sphere of foreign affairs. The initial excitement and misgivings caused by the news of the Tirana Treaty are likely to prompt a desire to seek compensation in another direction. Any such policy must inevitably retard the application to the Balkans of the only sound principle responding to their political and economic needs. Italian restlessness is an uneasy neighbour, and Yugoslavia is hardly to be blamed for seeking to make her position secure against the unknown in Italian policy. So long, however, as she is tempted to turn her attention away from a purely Balkan orientation, her difficulties are likely to increase. In THE NEAR EAST AND INDIA of November 11 attention was drawn to the significance that would seem to attach to a simultaneous gathering that had taken place a few days previously in Paris of representatives of the Government and of the Opposition in Yugoslavia, and it is noticeable that the Italian Press now take it for granted that a convention exists between France and Yugoslavia. In any such competition for insurance or reinsurance treaties it is always impossible to decide who is the first offender: but there should be no difficulty in being the first to break with a bad practice. If relations between the Balkan States had been what prudence and the interests of the several countries indicated, there would have been no room for Italy's political schemes to have embraced the Peninsula. The practice of not trusting to the League of Nations to maintain the peace of Europe was started by the Little Entente in the belief that the small State of Hungary, as it exists to-day, was in some unspecified way a menace to neighbours many times her superior in strength. The perpetuation of the old feuds and distrust beween the Balkan States gave Italy her opportunity to lend Bulgaria a helping hand. In the meantime Yugoslavia had encouraged France to regard her as a special *protégée*, and Italy's desire to strengthen her position in the Balkans was sharpened. It is reasonable to suppose that Yugoslavia, Roumania, Bulgaria and Greece, if their Governments were so minded, could come to an agreement on all matters outstanding between them, and thus free themselvs from the scares and friction inseparable from the policy of attachment to this or that Great Power.

The Near and Middle East*

From Our Own Correspondents.

Sofia, December 1.

The Political Situation.

The results of the voting on November 14, which were officially announced as being entirely satisfactory to the Government, have in fact considerably disturbed the Democratic Entente—notably the Parliamentary section, the different groups and sub-groups of which are accusing each other of responsibility for the situation thus created. Not even the President of the Council has escaped criticism; it is about him, indeed, that the sharpest things are being said.

The anxiety provoked by the improved position of the Opposition, and particularly that of the Agrarians, who return to the political arena, was such that a number of the Deputies of the Democratic Entente, forgetting that, after all, their party was still the strongest and best organised and had a sufficient majority in the Sobranye, thought that danger was imminent. They could see safety only in a return of Professor Tsankoff to power, this time with the support of the Democrats and eventually of the Radicals, to whom official overtures were started. But the idea of an immediate coalition was renounced; for this indeed would have emphasised the shock to the Government. It was, moreover, repugnant to the ideas of the greater section of the Democratic Entente, who still cherish their animosity towards the Democrats and above all to the Democrats' leader, M. Malinoff.

It should in justice be said that Professor Tsankoff, President of the Sobranye, who on the eve of the reassembling of Parliament had a long interview with his old adversary, General Volkoff, Minister of War, has not allowed himself to be spoken of as a rival to M. Liaptcheff as President of the Council. For reasons easy to understand he cannot assume power at this moment, and prefers to work in another direction to remedy the situation created by the last general election. In the Democratic Entente the prevailing opinion is that what is essential is a closing of the ranks by the rapid liquidation of existing differences, followed by a reforming of the Cabinet. This change would involve an alteration in the Ministry of Interior, where Mr. Liaptcheff is blamed for restricting the zeal of his subordinates. All the most influential men in the party are trying to get this change made: of obtaining a stronger man to combat the Opposition, and especially the Agrarians, without personally inculpating M. Liaptcheff.

What the final attitude of the President of the Council will be cannot be told. But M. Liaptcheff sees that if the elections in the spring are conducted under a régime of "force," they would signalise a struggle *à outrance* between the whole Opposition and the Government, which would split the country. This is what has made M. Liaptcheff refuse any reforming of the Cabinet at the present political crisis. Moreover, the *Kubrat* has just introduced a new element of trouble.

The "Kubrat."

The *Kubrat* is a nationalist organisation, composed for the most part of ex-soldiers, who are therefore called a Fascist organisation. It derives its origin from the régime of Stamboliski, when it had a kind of "conspiratorial" element, as being against the Agrarian régime, to which it wanted to oppose patriots of all classes. After the *coup d'état* of June 9, 1923, it took on a legal existence, preaching *l'union sacrée*, but a union acting against all revolutionary attempts. An organisation outside party politics, the *Kubrat* has resolved on a political *démarche* to set Bulgaria on her feet. A delegation of the leaders of this organisation has just called upon M. Liaptcheff, Professor Tsankoff, General Volkoff, M. Malinoff, M. Kostourkoff (leader of the Radicals) and several other leaders, to explain the badness of the internal political situation, responsibility for which rests equally on the Government and on the legal Opposition, and to ask them to unite against the danger from the Agrarians and Communists, and consequently to abandon all idea of coalition with these last elements.

The Kubratist leaders were variously received; some of them were told not to meddle in what did not concern them. Their action was severely and unanimously condemned by the entire Press, as being likely further to complicate matters.

ROUMANIA.

Bucharest December 2.

Political Affairs.

Parliament was reopened on November 15 by the King (whose health appears to have somewhat improved, although it still causes some anxiety). In the Message from the Throne His Majesty touched on a long list of Bills to be brought before the Legislature which cover a wide field of legislative activity, viz.:—Unification and reorganisation of legislation governing religious practice and institutions; Labour, Co-operative, and Public Health organisations; Unification of Judicial Legislation in all the provinces, beginning with the Penal Code and Jury Law; Press Law, Money Exchange Bill, Industries Bill, Roads Bill, Bill instituting Free Zones in the Ports (which has been over a year in the Committee Stage); Unification of the recent law reorganising the Railway Administration; new Customs Tariff (the sections on textiles and metallurgical goods were brought into force last April); and an Army Bill, with a special regard to pensions and recruiting

It is indicated that additional grants will probably be required for the Army. His Majesty expressed gratification at the satisfactory relations existing between Roumania and her neighbour and allies: the Treaty with Poland had been renewed and also the Little Entente Conventions with Czecho-Slovakia and Yugoslavia, while gratifying signs of consideration for Roumania had been shown by Great Britain and Italy. Reference is here made, no doubt, to the Italian loan recently granted and to the arrangements in regard to compensation for destruction of the oil fields which have been concluded with the British Government.

The delay on the part of the British Government in arranging for compensation for the oil fields destroyed be-

Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

School of Oriental Studies, London Institution

Digitized by Google

fore the German occupation, though no doubt justified by various considerations, had given rise to a good deal of bitter feeling in this country, and the arrangements now being concluded will go a long way to establish more friendly relations between the two countries.

Roumania, on her part, has also shown goodwill during the last two years by settling satisfactorily, and sometimes generously, various outstanding obligations to British subjects and institutions.

As a result of the various "settlements" both public and private, which have been made during the last two years, there is reason to hope that commercial relations between Roumania and Great Britain will soon be intensified, and, indeed, signs are not lacking that such a movement has already begun.

King Ferdinand's Illness.

The serious illness of His Majesty the King of Roumania gave rise to many unfortunate rumours on the possible return of Prince Carol as heir to the Throne. In a recent open letter to the Senate, which appeared in the daily Press, His Majesty has, however, publicly denied that there is any intention of altering the decision taken by himself and his Ministry in January of this year.

Austro-Roumanian Conventions.

The following conventions between Roumania and Austria, concluded in the year 1924, have been ratified by a Royal Decree published in the *Official Gazette* of November 18:—

1. Convention relative to insurance and pensions for State functionaries.
2. Convention relative to accident insurances for employees of Austrian Railways.
3. Convention relative to accident insurance in the mines.
4. Convention relative to insurance and pensions for employees of private and narrow gauge railways.
5. Convention relative to sickness insurance for functionaries for the former Austrian State Railways.

Roumano-Russian Frontier.

A Roumanian delegation has left Kishineff for Kameneky-Podolsk, on Russian territory, to confer with Russian delegates on certain questions relating to frontier administration.

Railways.

Final decisions have just been arrived at for the taking over by the Roumanian Government of nine of the private railways in Transylvania formerly belonging to Austrian companies, and negotiations are taking place with a view to settling the dispute which has dragged on for seven years with the Arad-Cenad Railway Company.

Thus Roumania is gradually settling up all her old accounts and getting her house in order, and it only remains for her to establish her railway system on a sound basis and to make provision for an increase of transport facilities adequate to meet the requirements of her ever increasing internal and foreign trade.

Obituary.

The Liberal Party and Roumanian political circles generally have sustained a heavy loss by the death, last week, of M. Alexander Constantinescu, who, whatever the criticisms brought against him in his lifetime, was universally regarded as one of the most capable statesmen of his generation.

Miscellaneous.

An amazingly enthusiastic reception was accorded on November 20 and 21 to Rabindranath Tagore, who visited Roumania under the auspices of the Press Association. He spoke on Sunday to a full house in the National Theatre, and a crowd equally numerous awaited him outside to cheer him on his way to his hotel. His lecture was disappointing, as he really said nothing, but dwelt on reminiscences of his youthful political development. This appears to be accounted for by the fact whispered abroad that his utterances were subjected to censorship by the Roumanian authorities.

HIJAZ.

Jidda, November 25.

The Sultan and Tribal Problems.

Ibn Saoud, having been at Madina for about a month, is about to pay a short visit to Riyadh, from which he has now been continuously absent for almost exactly two years. His son, the Crown Prince, Saoud, has carried on the administration of Central Arabia during this period with conspicuous success—a fact which, combined with his recent successful mission to Egypt, augurs well for the future of the Wahhabi State—but after all everything in this country depends for the moment, as it is likely to do for some time to come, on the extraordinary personality of the King-Sultan himself. At Riyadh he will meet all the tribal chiefs to discuss and order the affairs of the desert, of which perhaps the outstanding feature at the moment is a tendency to restiveness on the part of those branches of the Shammar tribe which sought refuge in Iraq after the fall of Haïl in 1921. Ibn Saoud has constantly urged that the presence of these Shammar refugees is an unnecessary source of friction between Arabia and Iraq, and has pressed for their return to the Haïl region, where they would be under his effective control. But to this proposal King Faisal's Government has been unable to agree, on the ground that it cannot eject political refugees claiming the hospitality of an Arab king. The consequence is occasional raids by these same refugees either on Ibn Saoud's own tribes or, as in the most recent case, on the little principality of Kuwait, and such raids are generally followed by protests addressed by the British authorities in Iraq to Ibn Saoud. The theory is presumably that the refugee Shammar are joined in these raids by their fellow-tribesmen on Ibn Saoud's side of the line, but there could seem to be no getting over the fact that the existing division of authority and responsibility is at the root of all the evil. Sooner or later the Shammar refugees must return to their ancestral range, and the British Government would be well advised to insist on their doing so at once, as the effectiveness of Ibn Saoud's control of the *Badawin* tribes is now beyond any possibility of question. Incidentally the Shammar responsible for the recent Kuwait raid appear to have been roughly handled by aeroplane and armoured-car patrols in the Syrian *Hamad*, whither they were proceeding with their booty owing to their inability to seek refuge either in Iraq or Najd.

Communications with Madina.

Presumably this will be one of the questions to be discussed between Ibn Saoud and the British Consul at Jidda, who left here on November 22 by motor car for Abyar ibn Hassani, a group of wells half-way between Rabigh and Madina, where the King will meet him. Incidentally it may be mentioned that a regular motor-route has now been effectively established between Jidda and Madina, a distance of nearly 250 miles, which is

regularly done in about 15 hours of actual travelling. The only serious difficulty on this route is the narrow gauge and steep descent of the Shufaia pass between Abyar ibn Hassani and Madina. The Prophet's city itself has suffered much tribulation during the last ten years and its former population of from 50,000 to 60,000 has dwindled down to no more than 10,000, at a generous estimate. The rehabilitation of Madina depends largely on the measures taken to re-establish communications between it and the outer world. And the question of the future of the Hijaz Railway is also on the tapis for the meeting already referred to, as the British Consul is accompanied by Mr. George Antonius, representing the Palestine Government, who arrived here via Port Sudan on the 19th and who, it will be remembered assisted Sir Gilbert Clayton last year in the negotiation of the Bahra and Hadda treaties.

The Hijaz Railway.

The basis of the negotiations now to be undertaken will doubtless be the joint Anglo-French declarations made at Lausanne in 1923, in which the two Governments declared their willingness to co-operate with the Hijaz Government and the Muslim world in the setting up of a Muslim Advisory Board with headquarters at Madina to advise the various Governments concerned—the Hijaz, Transjordan, Palestine and Syria—in all matters connected with the administration of the railway. Another important item of the declaration was that the whole of the revenues of the railway should be devoted to its maintenance and administration—any realised balance being allocated to the assistance of poor pilgrims. The Advisory Board was to consist of six members, one appointed by each of the four Governments concerned and two others elected to represent other parts of the Islamic world, e.g., India and the Dutch East Indies.

The adoption of this basis would certainly represent a great step in advance of anything that has hitherto been done—for the sections of the railway in Syria and Palestine have been treated for all practical purposes as State Railways of the two Governments, and the profits earned have found their way into the general exchequers of the countries mentioned—but Ibn Saoud, looking always to the general interest of the Islamic world and regarding the whole railways as a single entity endowed under religious law for the use of Islam *in perpetuum*, would doubtless like to see the powers of the Advisory Board considerably extended. This is a matter which should not be difficult of adjustment now or hereafter, but the practical requirements of the situation are (1) a settlement of past accounts of revenue and expenditure as from the date of the Allied occupation of Palestine and Syria; (2) the immediate release of the ascertained surplus, which, including the proceeds of the Hijaz Railway stamp tax, should amount to a considerable sum, for the rehabilitation of the section between Maan and Madina which suffered most during the War—this is urgently necessary for the reopening of through traffic to Madina; and (3) an equitable distribution of the existing locomotives and rolling-stock over the four sections of the line—at present Syria holds no less than 90 of the 120 locomotives estimated to be available though it has only 250 kilometres of the line; Palestine and Transjordan, administered at present as a single unit, have 26 locomotives for some 600 kilometres; while the Hijaz has only four locomotives for 800 kilometres, or practically half the line. This arrangement calls for urgent reconsideration, and it is hoped here that the negotiations will result in the restoration to the Hijaz administration of the section of the line between Mudawwara and Anaiza stations including Maan.

The Hijaz-Transjordan Boundary.

This last point is, of course, bound up with the question of the boundary between the Hijaz and Transjordan, for the discussion of which an opportunity will doubtless be found during the present negotiations. The recent Muslim Congress at Mecca passed a resolution calling upon Ibn Saoud to take such steps as might be necessary to secure the return to the Hijaz of the Maan-Aqaba province, which the British Government, as mandatary for Palestine, occupied in July, 1925, during the war between the Wahhabis and the Hashimite dynasty. The matter is a very simple one. The province formed a part of the Hijaz from the moment of its liberation from the Turks in 1917 and 1918 until the outbreak of the recent war in the Hijaz. Great Britain formally declared its neutrality in that war. In the circumstances her claim to the Maan-Aqaba province could not be maintained for a moment in any court of law, and Ibn Saoud, in asking for its restoration, is, it would therefore appear, only asking for his rights. The British Government can but plead superior might, and it is to be hoped that it will not be driven to that refuge. The present moment, when Ibn Saoud has demonstrated beyond doubt the stability of his régime, presents a favourable opportunity of settling the matter gracefully.

The Jidda-Port Sudan Cable.

Among other matters to be discussed between Ibn Saoud and the British Consul is the question of the cable between Port Sudan and Jidda. This matter was for many years a bone of contention between the British authorities and King Hussein, but now appears to be in a fair way to satisfactory settlement by agreement. The cable originally belonged to the Turkish Government, which administered both ends of the line and kept it in repair. As a result of the Great War its ownership descends in equal shares to the Hijaz and the Sudan, between whose Governments it has been agreed in principle that, while the Hijaz Government administers the Jidda end, the Eastern Telegraph Company shall take over the Port Sudan end and assume responsibility for the maintenance of the whole cable. In consideration of this arrangement the Hijaz Government will receive a quarter of the revenue accruing and the balance will go to the other parties—in practice to the E.T. Company. There is happily a considerable sum of money due to the Hijaz Government on a balance of accounts up to date, and the only points likely to cause delay in the completion of the agreement is the proposal that the Hijaz should refrain from using its wireless installations for outward messages (otherwise than in case of the interruption of the cable) and that the agreement should be for a period of twenty years. In these days when developments in wireless telegraphy may at any momnt revolutionise the existing methods of communication between distant countries twenty years is a long period for any Government to bind itself to the use of a cable. A very considerable loss of revenue might ensue, particularly to the Hijaz, the bulk of whose telegraphic transactions, private and commercial, are with India and Java. The present cost per word of a message to Bombay is 1s. 5¾d., of which under existing conditions the Hijaz receives only 1¾d., whereas if direct wireless communication should some day become possible Ibn Saoud's Government would receive half the revenue, or approximately 9d. a word. The whole question is doubtless receiving the closest attention of all parties concerned.

A Terrific Rainstorm.

Jidda, after long waiting, rejoiced to-day in a terrific thunderstorm, accompanied by torrents of rain, which fell without a break for three hours. For the time being the streets of the town took on the semblance of raging torrents and the open spaces became lakes, while the roofs of most houses blistered by long months of summer sun leaked like sieves. The accumulated filth of months has

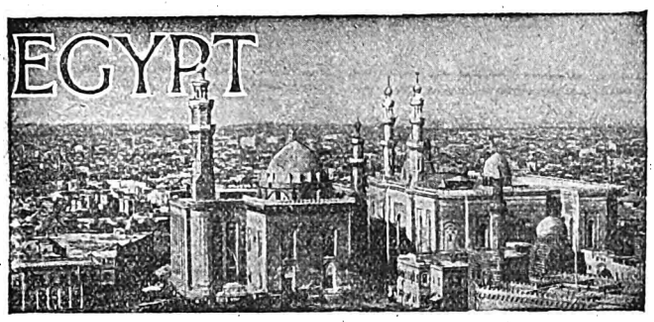
been washed down into the sea and the population is in holiday mood at the prospect of the filling of their tanks and reservoirs against the dry months to follow. At least two inches of rain must have fallen during the three hours of the storm, which seems to have been general throughout the country.



Cairo, December 4.

Sir John Maffey.

Sir John Maffey, the new Governor-General of the Sudan, left here this evening for Khartoum after spending three days in Cairo as the guest of the High Commissioner and Lady Lloyd at the Residency. During his stay Sir John was introduced to King Fuad by the High Commissioner, and he called on the Premier and met leading Egyptians at the Residency and at the Sudan Agency. The new Governor-General has made an excellent impression on all who have met him here and on all the Sudan officials who had the opportunity of seeing him in London this summer. He has by no means an easy task before him, but with the ready co-operation of the Civil Service—which is assured him—and his own experience of Oriental administration, he starts with a great advantage, and one has every reason to expect him to make a success of the administration of the vast and wonderful country now committed to his charge.

Professor Sarolea.

Professor Sarolea is continuing his series of lectures on Contemporary History at the State University in spite of the campaign directed against him in the Press. What he has said at the conferences he has so far given has in no way justified the criticism to which he has been subjected, and the abuse which has been poured on him and the deliberate misrepresentation that has taken place are a discredit to Egypt.

Egyptians seem to overlook that eminent foreigners like Professor Sarolea command the respect of the peoples of the old and the new world with whom the opinions they express carry the greatest weight, and that these foreign visitors are in fact potential propagandist agents for Egypt, for good or for ill, according to the impression which the people of the country make on them. It should obviously be the patriotic duty of every Egyptian so to act towards such visitors as to give them the best possible impression not only of the attitude of the people of his country towards foreigners, but also of their fitness for the independent political status which has been conferred on them.

The campaign of unlicensed abuse and disloyal criticism, which has filled the Press during the past month and the behaviour of the students, which has been encouraged from the same sources as those from which the Press has drawn its inspiration, while they may give satisfaction in certain Egyptian circles, cannot fail to have made the worst impression on the little band of eminent foreigners who with Prof. Sarolea are now lecturing here; and it will be no surprise if these visitors carry to the four corners of the globe, to which they will disperse on the completion of their mission, a tale of lack of control, discourtesy and bad faith which can but reinforce the impressions already made on the outside world by the messages of the foreign correspondents.

The Late Sir George Alderson.

Anglo-Egyptians in general and the British community in Alexandria in particular have suffered a sad loss through the death this week of Sir George Alderson. He was probable the oldest British resident in the country and, as far as is known, was the last of that small band of enterprising Britons who in the 'sixties laid the foundations of the great and prosperous community in Alexandria that to-day plays such an important part in Egypt's commercial activity. While the name of his firm has come to be known in almost every village in the country, that of Sir George Alderson will always be revered and remembered for the active and practical interest he took in all religious and philanthropic work. He was a public benefactor in the truest sense of the world, for his charitable acts far exceeded those that received publicity in the Press. Indeed the many who benefited by his private gestures of charity and kindliness will mourn him as much as do those in easier circumstances who knew only of his public deeds.

St. Andrew's Day.

St. Andrew's Day was celebrated in traditional fashion by the Caledonian Society. A banquet of over a hundred covers was held at the Continental-Savoy where the guests of honour were the High Commissioner and Lady Lloyd. The loyal toasts were given by Major Munro, President of the Society, who also proposed in felicitous terms the health of the principal guests. Lord Lloyd replied in a speech which will long be remembered by those privileged to hear him for the witty and inspiring words he addressed to them. The pious memory of St. Andrew was proposed by the Rev. A. R. Howell, and that of Bonnie Scotland by Prof. Sarolea, of Edinburgh University. Both speakers gave great pleasure to the gathering. Indeed, the speeches were all on a much higher level than we have been accustomed to in Cairo for some time past. After dinner the Argyll and Sutherland pipers played Scottish airs, and gave an excellent exhibition of Highland dancing.

Sir Rabindranath Tagore.

The great Indian poet has had a very warm reception here. Meetings were arranged in Alexandria, where the address of welcome was delivered by Mr. H. E. Barker, and in Cairo, where he was welcomed by Lutfi Sayed Bey, Rector of the State University. A special tea party was also given in his honour by the Egyptian poet Shawky Bey, at which the Prime Minister and Zaghloul Pasha were the principal guests invited to meet him. On each

occasion Sir Rabindranath delighted his audience by the eloquent simplicity with which he expounded his ideal and by his delightful reading of some of his poems, both in the original and in English translation.

ALBANIA.

Tirana, December 3.

The Troubles on the Border.

On November 20, on the eve of the national fête-day, an insurrection broke out in the mountains of Dukagjin, to the north-west of Skutari, of which the principal *bairak* is Shala. The rising began with great suddenness, and was handled so cleverly that, if the rebels had acted with more speed, they would have been able to enter Skutari and make themselves masters of the town. But eight kilometres from the town the first battle took place, and this checked the rebels. It is said that the insurgents lost 50 dead. All this occurred on November 22.

After the first engagement the Government received reinforcements. Two companies of soldiers (regulars) were sent from Tirana, also the battalion called Sulmues (shock troops) which was on garrison duty in the capital, with a battalion of the guard, although this last was not called upon. Soldiers in Durazzo were sent post-haste to Skutari, and another party to Valona, against all eventualities. Then came the turn of the irregulars, voluntary mercenaries, arriving under the command of their chiefs. As I told you in my last letter, these irregulars had just been disbanded—about a fortnight ago. Yet here they are again assembled. For a week Tirana has seen thousands of mountaineers arriving, and then with songs going off to the front. It is stated that within five days the Government had 10,000 men—sufficient to undertake operations in the Dukagjin district.

A second battle took place, with fatalities amounting to forty. At the present moment there is a rumour that the rebel chiefs are prepared to surrender. On the other hand, it is asserted that many of the Malissors, and especially their wives and children have sought refuge in Yugoslav territory.

It is worthy of note that official details are completely lacking, the Government having contented itself with announcing its own success and the defeat of the rebels, without any explanation.

Causes of the Rising.

What is the nature of this rising and what aims had it in view? Inquiry, no doubt, will lay bare the underlying motives of the insurgents. For the time being we must be content with three facts:—

(1) The insurgents had help from outside. This is proved by the fact that they had rifles of a type not used in this country. (2) Albanians of the Opposition—those who left the country two years ago and are now scattered in different parts—had no hand in this movement. And (3) the mountaineers (Malissors) are all Catholics.

The Opposition.

It has been mentioned above that troops were sent to Valona, in case of emergency, for it was feared that the insurrectionary movement might spread to the south. But no such thing happened, the southern part of Albania remaining loyal to the Government. Over a month ago pourparlers were being indulged in between a delegate of the Government of Tirana and the chiefs of the Opposition. These negotiations began at Bari (Italy) and were continued at Corfu. It seemed that agreement was on the point of being reached, the Government of Ahmed Zogu being disposed to accept certain conditions imposed by the leaders of the Opposition.

The National Fete.

The anniversay of the Day of Independence, Sunday, November 28, was celebrated in Tirana and in the rest of the towns with enthusiasm, and with the ordinary programme. This time, however, there was no military parade. The President of the Republic received congratulations from Ministers, Senators and Deputies, and of the Diplomatic Corps accredited to Tirana.

In the evening a ball was given by the Minister of Foreign Affairs. This was the first dance given in Tirana by the authorities, and the affair would have been extraordinary, by reason of the presence of ten Mussulman Albanian families, had not Mustapha Kemal some time ago inaugurated the "régime of the dance." Also owing to the precedent set by Angora, the hats worn by several functionaries and the "Casques" of the soldiers excited little curiosity.

The Italo-Albanian Treaty.

This fortnight is indeed full of events. On December 2 the Government issued a *communiqué* to the Press announcing the conclusion of a Pact of Friendship and Security with Italy. There have been no comments or details. In Albania most newspapers are published by young men of no importance and without social standing. They reflect no body of opinion, and it is difficult to obtain from them an idea of the effect produced by any particular event.

More than a week ago one heard rumours of an interview between Baron Aloise, Italian representative in this country, and Ahmed Zogu. Possibly this Treaty was hastened on (it might even have been created) by this last rising in Dukagjin. It is stated that Italy has consented to the request of the Albanian Government for an advance of a million gold francs on a loan of 50 millions. This can hardly be entertained without the consent of the Italian Company for the economic development of Albania.

The Pact is one of friendship, security and arbitration. It will be submitted immediately for ratification by Parliament, and then will be registered at the League of Nations. The impression is held here that this pact is directed against no particular State, and it is even suggested that the Albanian Government would willingly conclude a similar pact with Yugoslavia. Nevertheless there is no doubt that Albanian policy has entered upon a new phase, and that in the future it will not be able to preserve the neutrality which it has shown up to the present. From this time henceforth Albania will have to take definite sides in the various European groupings. It is true that the present Albanian Government, since its accession to power two years ago, has followed a policy of cordial friendship with Great Britain, and it may be that this last Pact does not consort ill with that policy of friendship.

THE DEATH OF PASHITCH.

The death was announced on December 10, in Belgrade, of M. Nikola Pashitch, the most prominent political personality in Yugoslavia. A sketch of the career of this veteran statesman was made by our Yugoslavia Correspondent in a letter describing the celebration of the Radical Leader's eightieth birthday early this year. Here it may be recalled that Pashitch was born in 1845, in a Serbian village, Zayetchar. His parentage is said to have been Bulgaro-Macedonian, and some have attributed to him an Armenian strain. As a student in Zurich he listened to the revolutionary doctrines of Bukunin. Returning to Serbia, he acted as a convinced rebel, and so came into conflict with the authorities. More than once Pashitch was saved from severe punishment, and more than once had to flee his country. Unceasingly, however, he opposed the Obrgnovitch Dynasty in Serbia, demanding parliamentary government on behalf of the peasants. On the eclipse of the Obrenovitches, he came to work loyally for the advancement of Serbia under the Karageorgevitches, and practically dominated the country through his headship of the Radical Party. Throughout the Great War and in the difficult days after the War Pashitch represented his country. He first became leader of his country thirty-five years ago, and had held power practically continuously for twenty years. He dominated the political stage of Serbia, and if in the working out, after 1918, of the Yugoslav ideal, his genius did not shine so brilliantly, he will, as our Liubliana Correspondent has remarked, always be remembered as having liberated his country both from external and internal foes.

PERSONAL AND GENERAL

TO-DAY

December 16, 1926 (New Style).
December 3, 1926 (Old Style).
Jomada II. 10, 1345 A.H., of the Muslim Calendar.
Tebet 11, 5687 of the Jewish Calendar.

Mr. and Mrs. Mudie-Cooke left for Ceylon and Egypt on December 11.

The Raja and Ranee of Pudukota left London on December 11 for Paris.

Mr. Reginald and Lady Margaret Loder have left Maidwell Hall for Khartoum.

Mr. Justice Russell has gone on a sea voyage to Egypt for the benefit of his health.

Viscount Inchcape left 4, Seamore Place for Glenapp Castle, Ballantrae, Scotland, on December 9.

The Hon. Mrs. Lane-Fox, who is on her way to India, will be away from England until the end of March.

Sir Austin Harris is leaving London this week for India, and will be away from England until the end of February.

Sir Victor Warrender, Bt., M.P., and Lady Warrender left 18, Upper Grosvenor Street on December 9 for India.

The death has occurred of Major-General John Barton Sterling, who saw service in Egypt and the Sudan in the 'eighties.

Viscount Elveden, M.P., and Viscountess Elveden will leave 11, St. James's Square on December 21 for India, where they will visit the Viceroy.

The Maharaja of Burdwan and the members of his family, who had been spending a few days at Nice, embarked for India on December 10 at Marseilles in the mail steamer Morea.

Sir Herbert Samuel arranged to speak on "The Situation in Palestine" to the Palestine Committee of the House of Commons and to other members at the House of Commons on December 14.

Madame Ferid Bey, wife of the Turkish Ambassador in London, was on December 10 operated on for appendicitis in Paris. Her daughter, Mlle. Ferid, also underwent an operation for the same complaint. Both are progressing satisfactorily.

In pursuance of his Majesty's pleasure (states the *London Gazette*) Prince Nicolas of Roumania has been appointed an honorary lieutenant in his Majesty's Fleet. Prince Nicolas is the second son of the Roumanian Sovereigns, and accompanied Queen Marie on her recent tour in the United States. He is 23 years old.

The following officiating appointments have been made in India:—

Colonel L. I. G. Morgan-Owen as Director of Organisation at Army Headquarters; Captain H. S. Skinner, as Deputy-Assistant Director of Ordnance Services at Mhow; Captain L. M. Coombe, as Chief Instructor, Army School of Physical Training; Major J. C. Wickham, as Assistant Adjutant-General, Army Headquarters; and Captain F. I. de la P. Garforth, as Deputy-Assistant Adjutant-General, Army Headquarters.

Major-General Sir Pomeroy Holland-Pryor has been transferred to the unemployed list on completing his appointment tenure. Lieutenant-Colonel J. Mackenzie has taken up the duties of Hon. Surgeon to the Viceroy. Major R. N. G. Scott has taken up duty in the Cypher Section at Delhi. Captain J. C. Maude has been appointed temporarily as Adjutant at the Army School of Physical Training.

The Roumanian Minister was expected to return to London yesterday from Geneva.

The King has approved the following appointments:
Sir Stanley Fisher (Chief Justice of Trinidad and Tobago) to be Chief Justice of Ceylon.
Sir Sydney Charles King Farlow Nettleton (Chief Justice of Cyprus) to be Chief Justice of Gibraltar.

The Secretary of State for the Colonies has selected Major Hubert Winthrop Young, C.M.G., D.S.O., Indian Army, who has been serving for some years in the Colonial Office, for the appointment of Colonial Secretary of Gibraltar.

A number of units belonging to the forces maintained by Indian States, have been given distinctions for the part which they played in the late Afghan war in support of the British and Indian Army troops. The scroll, "Afghanistan, 1919," is to be added to the Standard, Colours and appointments of the following units:—1st Patiala Rajindra Lancers, Alwar Mangal Lancers, 1st and 2nd Kashmir Pack Batteries, Faridket Sappers and Miners, Sirmoor Sappers and Miners, Tehri Garhwal Sappers and Miners, Malerkotla Sappers and Miners, Jind Infantry, Nabha Akal Infantry, 1st Patiala Infantry, 1st Kashmir Kaghupartap Battalion, 3rd Gwalior Maharaja Scindia's Own Battalion, Kapurthala Jagatjit Infantry, the Bharatput Transport Corps and Gwalior Transport Corps, and the Holkar Transport Corps.

A dinner was given at the House of Commons on Dec. 9 in honour of Lieutenant-Colonel the Hon. Stanley Jackson, Governor-Designate of Bengal, by Mr. J. S. Wardlaw Milne, M.P., who was himself prevented by illness from being present. Sir Henry Craik, M.P. presided in his absence, and the following were among those present:—

Sir Henry Parsall Burt, Sir Campbell Rhodes, Sir Charles McLeod, Sir Montagu Turner, the Hon. E. J. Hawke, Major-General Sir Alfred Knox, M.P., Mr. E. Hilton Young, M.P., Brigadier-General J. Charteris, Sir Stephen Demetriadi, Mr. Samuel Samuel, M.P., Sir Sydney Sitwell, Mr. Dudley B. Myers, Mr. G. Pilcher, M.P., Mr. E. T. Campbell, M.P., Sir Thomas Birkett, Sir Percy Newson, Mr. H. F. Weir, Mr. Alastair Cameron, Brigadier-General W. Warner, M.P., Sir Harry Greer, Sir Malcolm Hogg, Mr. A. C. Gladstone, Mr. R. Langford James, Mr. W. Osborn Grazebrook, Sir Gervase Beckett, M.P., Colonel John Gretton, M.P., Mr. L. T. Carmichael and Mr. William Greaves.

THE WEEK AT HOME.

London, Tuesday Morning.

Parliament.

Parliament is to be prorogued to-morrow, and it hardly seems probable that the public in general will miss the thin debates that have recently characterised the Houses. Not even the "big" occasions produced anything very memorable, and as for the less important items—there have often been fewer than a hundred members in attendance. The "vote of censure" on the Government which was moved by the Labour Party last week proved a farce, for the artillery was all on one side. The Prime Minister had really the easiest of tasks, and after Mr. Churchill had spoken it was obvious that regard for the liberty of the subject was not the only criterion which the authorities used in meeting the demand, very widely made by readers of the *Daily Mail* type, that the notorious Mr. Cook should be arrested. For this miners' leader at large is worth thousands of votes to the Conservative Party, whereas in gaol or in confinement he would probably be an asset to the Labour Party. At present he may be doing both sides a good turn by keeping in Russia.

The Labour Party will make another attack on the Government to-day, on the question of necessitous areas, but, whatever may be going on outside the House of Commons, it is quite certain that inside the Conservatives maintain their strength intact. Their reputation is not lower at the end of this session than it was at the beginning, thanks mainly owing to the miserable Liberal feuds, and to the inert, or undecided Labour policy over the coal crisis.

The "Morning Post's" Move.

Owing, it is said, to the increasing circulation of the *Morning Post*, and the consequent need for more modern machinery, this penny Conservative newspaper is shortly leaving its handsome premises in the Strand (which have for about twenty years been a landmark, so to speak), for the intenser and perhaps more hectic atmosphere of Tudor Street. The only people who can now produce papers at leisure are, it seems, the weekly illustrated folk, and it is Mr. Harrison, who has recently purchased publications such as the *Sphere*, *Illustrated London News*, *Tatler*, and so on, who is moving into the buildings which abut upon the Strand and Aldwych.

It has been a matter of common speculation, ever since the *Post* went down to a penny, how this "best" paper was really faring. Nor will this curiosity, or anxiety, be lessened by the new move to the vicinity of the *vulgum profanum*. Everyone, I suppose, has his views on how the penny *Post* compares with the old twopenny one, to which there was no sort of rival in certain particulars. The move to Tudor Street would seem to imply a more direct competition with the more popular kinds of penny journal.

The Liberal Lute.

The lute is now an old-fashioned instrument, and it is by no means certain that even if the Liberals were eventually able to patch up all their rifts, the resultant sounds would fall gratefully upon modern ears. In any case, the probability of their ever being a united party again, at least while the more notable personalities remain, appears to be remote. In the last few days, an appeal by the younger Liberals of the country has been made to sink all differences, but to the older men who are opposed to Mr. Lloyd George this appeal means little. For to them the sinking of differences means in effect the triumphing of Mr. Lloyd George.

It is all rather pathetic, this advice of the Liberal striplings to the sages of the party. The wise, unmaterialistic men of the party are indeed living in the pure hills of high and lofty thought, apart, perhaps, from the realities of to-day; while down in the vales so well known to the ordinary politician live those Liberals who would, for the sake of political advantage, forget past differences. And, viewing the two rival camps of Liberals, the adolescent Liberal politicians, who volubly dictate from the Universities of Oxford and Cambridge, would seem to prefer the more numerous people of the lowlands. In other words, they in effect plump for Mr. Lloyd George. How he would have loved all this who wrote:—

> The mountain sheep are sweeter,
> But the valley sheep are fatter;
> We therefore deemed it meeter
> To carry off the latter.

London's Bridges.

An idea of the magnitude of London's cross-river traffic problems can be gained from the recommendation, by the Royal Commission appointed to report on the subject, of an expenditure of twenty-seven millions. It is suggested that two-thirds of this money shall come from motor vehicles, through the Road Fund, and half a million a year from the local authorities in the London traffic area.

The proposals are that, first of all, Waterloo Bridge shall not, as has been widely suggested, be replaced by a modern bridge, but shall be widened and in part rebuilt. The Commissioners compromise again with regard to Charing Cross. They propose not to shift Charing Cross Station across the river, but to rebuild it a little to the east of the present site, and to have a new bridge to carry the railway on its present level and road traffic on a high level track which would cross over the Strand, curve round behind St. Martin's Church, and reach the level of the ground at the bottom of Charing Cross Road and St. Martin's Lane. Other things proposed are a new high level Ludgate Bridge (like the Blackfriars railway bridge), and a continuation of the Cromwell Road in the West of London by a bridge over the West London Railway and by two bridges over the Thames, at Fulham and at Chiswick.

These are very important proposals, so large that they can be rightly appreciated only by experts. It is something, however, that almost all the newspapers appear to favour the Royal Commisioners' Report, which is thought to have balanced nicely the aesthetic and the materialistic claims of Londoners.

ALTER EGO.

The Bulgarian delegates left Sofia on December 8 for Athens to negotiate and sign a Commercial Treaty. The opening of the negotiations between Greece and Bulgaria is hailed with great satisfaction in Bulgarian political circles.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

ITALY AND ALBANIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—It is not surprising that a movement like Fascism, which is essentially a repudiation of the individualistic doctrines that found expression in the Reformation and the French Revolution, should be attacked in countries predominantly Protestant, like England, or dominated by Freemasonry, like France; and in these circumstances it is only to be expected that certain sections of the opponents of Fascism should be found to resort to abuse and misrepresentation.

It is, however, surprising that a paper like THE NEAR EAST AND INDIA, whose honesty is above suspicion and whose chief attraction lies in its limpid objectivity, should allow itself to become the innocent victim of false reports circulated by unscrupulous opponents of Fascism.

I refer to the "Notes of the Week" in your issue of the 3rd instant. The insinuations therein expounded against Italy are wholly unwarranted. These notes were, of course, printed before the recent Treaty between Italy and Albania was published. This Treaty is sufficient to expose the groundlessness of the reports to which currency has been given. The following additional facts, however, may prove interesting:—

1. Monsignor Fan Noli is not resident in Italy and has not made Italy his residence at any time since his exile from Albania. This applies also to the members of his own particular group (Mustapha Kruja, Bedsi Bey, etc.).

2. If Mgr. Fan Noli or his friends have visited Italy during their exile, it has only been for short periods and at rare intervals.

3. Mgr. Fan Noli has never ceased to complain of the lack of support shown him by Italy at the time when Ahmed Zogu successfully organised his descent on Albania within Yugoslav territory. At this time Ahmed Zogu was represented as an instrument of Yugoslavia. Yet Italy refused to support Fan Noli, though support then might have resulted in a repulse for Ahmed Zogu. Italy preferred to maintain a perfectly correct attitude *vis-à-vis* the contending parties. Why should Italy now reverse her policy, when Ahmed Zogu has proved himself quite independent of Yugoslav influence and when Fan Noli has lost all prestige among Albanians, except among a very small minority, of those still opposed to the actual President?

4. The chief opponents of the present régime in Albania have entirely repudiated Fan Noli. Most of the leaders of this group (Ali Klissura, Petsi, etc.) have indeed taken refuge at Bari in Italy. They have recently published a manifesto discountenancing in very strong language the late attempt at insurrection in Northern Albania; and there is no reason to suppose that that this declaration is not in good faith. However this may be, I have reason to know that, grateful as they are to Italy for harbouring them, they complain of not receiving the support which they claim to deserve from the Italian Government and of the strict police supervision which the Italian Government maintains in their respect.

No, Sir! Italy has in no way lent itself to party intrigues, which concern Albania alone, and she has no desire to see the present régime in Albania upset. Any insinuations to the contrary are based on lies circulated by a few unscrupulous agents in Yugoslavia, whose conscience is ill at ease with regard to the manner in which Ahmed Zogu was enabled to organise his descent on Albania within Yugoslav territory; and these lies are encouraged by the enemies of Fascism in the hope of branding Signor Mussolini as a war-monger. Surely it would be wiser to judge Signor Mussolini's foreign policy by his deeds and not by these scare-mongers' allegations; for no country during recent years has made such strides as has Italy in the cause of peace. If Treaties of Commerce, Arbitration, and Unity count for anything at all, these surely are the best proofs of peace intent.—I am, etc.,

J. S. BARNES.

Rome, December 7.

THE DEVELOPMENT OF CYPRUS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I am very sorry to see that a correspondent from Kyrenia, Cyprus, writing under the initials "G. L. H." disputes (in your issue of December 2) the accuracy of my statement concerning the excellent quality and delicious nature of the Island fruits. If he referred to one or two items, namely, the apples and pears, his stricture would not be quite unwarranted. It is an old question which has so often been ventilated in the local Press—at least many a time by the writer of these lines in his former capacity as an Editor of a Cyprus newspaper—that the quality of these particular fruits, although presenting certain delicious varieties, leaves generally something to be desired. That is why in my enumeration of the Cyprus fruits published in your issue of October 28, I omitted any mention of apples and pears, two of the leading items in the international Kingdom of fruits.

But "G. L. H.s" ban on the quality of Cyprus fruit is unrestricted and unqualified, and, I strongly emphasize, unjust and misleading. I will try, if not to convince him, at least to refute his statements with the official testimony of no less an authoritative document than the latest (1925) General Annual Colonial Report on Cyprus, just issued from His Majesty's Stationery office. I quote: "The fruit crops were again excellent and good prices were obtained . . . . The best Cyprus oranges are considered by many to be superior to the Jaffa oranges . . . . and there is no reason why Cyprus oranges should not secure a permanent place on the market in England" (p. 25).

In another publication: "*Cyprus, A brief survey of its history and development*," Nicosia, compiled on the authority of official records by Mr. W. H. Flinn in 1924, it is stated:—"The rest of the year (after May) provides a succession of delicious fruit, in rich profusion and endless variety (p. 5). The fruits and vegetables are unexcelled anywhere (p. 6)."

In p. 45 it is stated: "The Island is a veritable garden of fruits . . . . In the hills, apples, pears and plums are produced, but are inferior to the English varieties." In p. 70:—"It is unfortunate that so much of the surplus fruit produced in Cyprus is wasted for want of a large preserving undertaking . . . . Here a canning factory able to deal with the vast surplus quantities of fruits (causing sometimes a fall of prices to unremunerative rates) would be an inestimable boon."

I believe the above quotations, to omit countless other pieces of evidence, are quite sufficient to bear out my point. Abundance and high quality and cheapness of fruit are there to ensure the regular working of a factory. Those particular fruits which are defective may be made better by improved methods of cultivation and production which the Cypriot peasant will be induced to adopt.—I am, etc.,

C. S. HOURMOUZIOS.

34, Northumberland Place, W.2., Dec. 6.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The letter published in your issue of December 2, over the familiar initials "G. L. H.," will have surprised many besides myself.

"G. L. H." can hardly be aware that Cyprus oranges sent over for the Wembley Exhibition were regarded as among the finest, if not the finest, offered on the London market. Cyprus mandarins and lemons are also hard to beat, while her plums, apricots, figs, "Kaishas," are of excellent quality. This is admitted by all visitors to the Island.

If "G. L. H." referred to other fruits, e.g., apples, pears, cherries, etc., these can be grown only in a few suitable localities and are not regarded—nor, I am sure, were so regarded by Mr. Hourmouzios—as articles of export.

The grapes, grown mostly for wine-making, are never-

Digitized by Google

theless delicious eating and would be well worth trying on the London market, but not, of course, in competition with glass-grown varieties. There is a large consuming public here who cannot afford such hot-house luxuries, but would welcome a much cheaper grape of the Cyprus variety.

One could wish that the defective quality, which "G. L. H." deplores, had been observed when he first took up residence in the Island many years ago. One can scarcely doubt that had this been so he would at once have set to work, keen agriculturist and landowner as he is, to remove the reproach, and would by now be able to give added weight to his criticisms by pointing to the fruit trees of his own cultivation possessing the required quality.

Cyprus, it should be remembered, is almost the sole country in the Mediterranean which is free from phylloxera; but the restrictions which have secured that immunity have prohibited the importation of new or better varieties of all kinds of plants except from distant or unsuitable countries. This disadvantage has, probably been less felt in fruit growing than in any other branch of agriculture.

Had "G. L. H." stressed the need of better grading, packing and shipping facilities, he would have been on firm ground. This need is fully recognised by those in authority and will, no doubt, be remedied in the near future and, it may be hoped, will receive some share of attention from the Empire Marketing Board.—I am, etc.,

WM. BEVAN.

Avenue House, Northumberland Avenue, W.C.2.

THE BOMBARDMENT OF DAMASCUS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Having read with great interest the report of my recent lecture on Syria and of the subsequent discussion which appears in your issue of December 9, will you allow me to draw attention to one passage which may otherwise lead to a misunderstanding?

Sir Arnold Wilson is reported to have said that he was relieved and surprised to find from my photographs that the ruined area in Damascus was only 300 feet square. What I said, in explanation of a general photograph illustrating the destroyed quarter of the city, was that I understand this quarter measures very roughly 300 yards square.—I am, etc.,

H. CHARLES WOODS.

LORD WINTERTON'S VISIT TO INDIA.

Lord Winterton, M.P., Under Secretary for India, with Lady Winterton, and Sir Victor Warrender, M.P., and Lady Warrender left London on December 9 for Bombay. They are due to arrive at Bombay on December 24. Four days later they reach Calcutta, and subsequently visits will be paid to Benares, Bikarnir, Jodhpur, Ajmere, Udaipur, and Delhi. Lord Winterton will accompany Sir Samuel Hoare, M.P., Secretary of State for Air, who, with Lady Maud Hoare and party, is taking part in the official opening of the new Egypt-to-India air service by flying from Cairo to Delhi in an aeroplane trip from Delhi to the Frontier. They will spend the night of January 17 at Lahore, and thence fly to Rawalpindi, Peshawar, and to the Waziristan country, where Razmak will be visited. Subsequently Lord Winterton will visit Patiala and Baroda, and, returning to Bombay, will embark there on February 5.

TURKISH SELF-TAUGHT

(In Turkish and Roman Characters.)

Revised and re-edited by

Prof. G. HAGOPAN & Prof A. GEORGIUS, B.A.

Containing ALPHABET and PRONUNCIATION, Classified Vocabularies Necessary Phrases and Conversations, Elementary Grammar, Tables of Money, with illustration of Turkish Coinage, Weights & Measures.

ENGLISH & TURKISH DICTIONARY.

NEWS IN BRIEF.

The 3rd Brigade Royal Horse Artillery has been moved from Egypt to Newport and Trowbridge.

During the first half of the fiscal year ended in September, 1926, the revenue of Palestine was £E1,038,856, showing a surplus of £E91,226.

A great thunderstorm on December 10 ended the serious drought which has been experienced in Jerusalem. Within a few hours nearly 3 in. of rain fell.

The Albanian Senate, in the course of an extraordinary Session on December 10, unanimously ratified the Italo-Albanian Treaty.

The middle part of the Royal Palace in Bucharest, including the Hall of Ceremonies or Throne Room, was destroyed by fire on December 7.

The ex-Tsar Ferdinand of Bulgaria underwent a minor operation at the Red Cross Hospital at Munich at the beginning of last week. It was performed by a former Court surgeon, Professor Colmers.

According to *The Times* Jerusalem correspondent the management committee of Shaarei Hesed, a Jewish suburb of Jerusalem, has instructed its tenants to eject from their premises "all occupants having shaven chins or shorn sidelocks, or committing similar offences against strict orthodoxy."

The Rev. Kenneth Kennedy, who, after many years of missionary work in India for the S.P.G., has been appointed Bishop of Chota Nagpur in sucession to Dr. Wood, was consecrated at Ranchi, India on December 12 by the Archbishop of Calcutta.

The Jaffa Arabic newspaper *al Yamuk* publishes an alleged letter from Sultan Pasha el Atrash, who is made to state that the Druses will continue to fight against the French, and to thank Palestinians who made financial contributions through the president of the Muslim Supreme Council in Jerusalem.

The Vali of Trebizond has issued a proclamation forbidding women to wear the veil hitherto customarily worn by Muslims. The proclamation says that the wearing of the veil deprives women of the possibility of earning their livelihood, that the custom is well known to be insanitary, and tends to hinder the work of the police by enabling criminals to conceal their identity.

A Trebizond newspaper has suggested that the Turks, as a sign of gratitude to the Ghazi Pasha, should change the name of Constantinople to "Ghazi Mustapha Kemal." The suggestion is favourably received in Constantinople, says *The Times*, and the Acting Prefect is of the opinion that the municipal council may make the change.

Last Friday (December 10) was observed in Jerusalem as Deliverance Day, being the ninth anniversary of the capture of the city by the British forces. The customary solemn service, in which all three official languages were used, was held in St. George's Cathedral. The leading representatives of the various communities and the heads of the Oriental Churches were present.

The British and Foreign Bible Society have decided to erect in Jerusalem a Bible house worthy of its objects and of the "Cradle of Christianity." Just outside the old walls, about equal distance from the Jaffa and Damascus Gates, a site has been purchased in the heart of the business activities of the city. The house is now being erected in Oriental style according to the designs of a British architect living in the East. To complete and furnish the building a sum of £11,000 will be required. Special freewill offerings for the Bible house should be earmarked "For Jerusalem."

INDIA'S POSITION IN THE EMPIRE AIR ROUTE.

India's position on the Imperial Air Route has several times been discussed in the columns of THE NEAR EAST AND INDIA; but the question is one of such importance that it is needless to apologise for referring to it again. In a paper read before the Central Asian Society in October, the lecturer, when discussing the saving of time to be expected by the passenger travelling to India by air, dwelt on the obvious fact that it varies according to the place in India that he wishes to reach: and said that the average saving would be increased from five days to seven if the air route could be extended from Karachi to Delhi—an extension that would not involve the provision of any additional machines. He added that, this being so, it is natural to ask why that extension is not undertaken: and declared the answer to be that civilian aviation cannot at present be carried on on its traffic receipts alone, and the subsidy provided by the British Government does not permit of any extension into India; but, if a regular and reliable service can be provided as far as Karachi, it was hoped that the India Government would desire to have the line extended to the Capital of the Indian Empire. This, of course, means, in plain English, that the Government of India is prepared to encourage internal civil aviation so long as somebody else will pay for it, but declines to do so itself. The latest authoritative pronouncements made on the subject in India do not altogether bear out this view; but they disclose a state of affairs that comes to very much the same thing. It is asserted that no details regarding the scheme for inter-Imperial air communications have yet been received from England; but that the Government of India fully recognises the paramount importance of India's position in the scheme, is fully alive to the need for the development of her air communications, and, so soon as detailed suggestions are received from the Air Ministry, will give them its "prompt consideration." The message goes on to say that it is true that, when Karachi becomes the Indian air terminus, it will be up to the Government of India to exploit the situation and improve internal communications, but "several interests will have to be carefully weighed" and financial examination of the scheme in all its details will have to be undertaken before it can be possible to sanction it. Another apparently authoritative statement goes a short step further. It says that the Government of India has applied to the Air Ministry for the loan of a competent director of civil aviation who, if and when appointed, "will make arrangements for a thorough air survey of the main routes. Data will then be available for firms responding to the Government's invitation for tenders for the operation of India's internal air routes: and it should then also be possible to estimate the extent of the Government subsidy required." The statement adds, with inexplicable optimism, that, in these circumstances, there is no prospect of the Calcutta-Rangoon air service, which is to be the first of these officially aided enterprises, being initiated for at least a year.

The apparent position regarding internal civil aviation in India, therefore, is that, failing the willingness of the Home Government to pay for it, the Government of India has screwed up its energy to ask for an officer from England to make a survey. When he has done so, the Government will invite tenders: and, having got them, will consider the amount of subsidy to be offered. After this, it will begin the careful weighing of "several interests" and will finally be in a position to put up a case for the provision of the money. If it can persuade the Legislative Assembly to approve of this, there will then be a prospect of an attempt at beginning to do something practical. Meanwhile, it is interesting to look at the present position: and, for that purpose, one cannot do better than turn to Calcutta. A mail or two ago, Calcutta enthusiasts were ridiculing the idea of Karachi, situated in an almost inaccessible corner of India, remaining as the India air terminus, and proudly declaring that this honour was certainly reserved for Calcutta. In view of this claim, it is interesting to quote the following passage from a leading Anglo-Indian newspaper. "Although, because of the development of flying and the geographical position of Calcutta, this city is becoming more and more a port of call for aeroplanes . . . Calcutta has not even begun to think of air developments. She possesses what is euphemistically called an aerodrome, but it is really an overgrown meadow situated on the verge of a huge swamp, fourteen miles from the city. When this was selected as the aerodrome, the ground cleared, and hangars erected, three planes were brought down from the Frontier and these, with a private plane belonging to a Calcutta merchant, gave the aerodrome quite a business-like appearance. But the private plane was the only one that was ever flown, the others having apparently been brought down in the hope that someone would buy them: and all were soon lying derelict. Finally, a storm blew the hangars down upon the machines. No attempt was made to re-erect them, and to-day the ghastly bones of the aeroplanes show through the wreckage of the hangars. There is no ground staff, only a couple of Indian watchmen, no telephone, and no means of enabling airmen, who land there, to communicate with anybody or of getting into Calcutta except by walking."

The immediate text for this outburst is the fact that the two French airmen who recently visited Calcutta in the course of their record journey, were delayed in their flight and did not arrive until the day after that on which they were originally expected. When they did arrive, they found no arrangements for their reception, had to leave their plane in the open under the protection of a policeman, and would have been stranded three or four hours' walk from Calcutta had it not been for the enterprise of a pressman, who motored out from Calcutta on the chance of meeting the Frenchmen. It is also recalled that, when Alan Cobham first arrived in Calcutta, he had to leave his

Digitized by Google

sea-plane in a sheltered reach 14 miles from the City and do the rest of the journey on a launch. It is not as if there were no more accessible place for landing: there is, on the contrary, an ideal landing ground right in the heart of Calcutta, bordering on a sheltered reach of the river; but this fact is nowhere advertised, and special permission has to be obtained, to land there, by those who are fortunate enough to become acquainted with it. The cause of the outcry is to be found in a charge not only of neglect but of deliberate discourtesy alleged against the Calcutta military authorities; but it is now explained that the French aviators were not met officially owing to the breakdown of a military car. It is obviously impossible that Karachi, in one corner of the Indian peninsula, can remain the air centre of India; or that Calcutta, almost in the opposite corner, can take Karachi's place, though both will remain important stages on the Empire air route. The Indian air centre must be Delhi, and arrangements must be made not only for this, but for the development of facilities on the air routes leading from it. It almost looks as if the Indian authorities, fearful of what the future may bring forth when the fateful Royal Commission of 1929 presents its report, had made up their minds to do nothing until then: had adopted the "Lost Dominion" attitude that has been condemned so unsparingly by official speakers in England. Whether this is so or not, it is high time that they were rudely jolted from their present apathy: and that, if they continue to refuse to take urgent action in so vitally important a matter, an official with large powers were sent from England to compel them to do, in the interests of the Empire, what they persistently neglect to do in the interests of India and of themselves.

CURRENT TOPICS.

Light in the Village.

Sir Malcolm Hailey's farewell to the expiring Legislative Council is noteworthy for the interesting, and also encouraging, description of the efforts now being made to carry the lamp of learning into the villages of the Punjab. Possibly some discount must be allowed for the initial optimism characteristic of bureaucracy in general, as well as the not ungraceful pharisaism observable at times in the Punjab bureaucracy in particular, but still there are hard facts and figures to show that a courageous effort is being made to find a solution of the problem which has baffled India for the last half century. Put shortly, the problem is to devise village schools which shall be worth the money spent on them. It is nearly ten years now since the Educational Commissioner pronounced a comprehensive anathema on nearly all that had been done in this direction, and the anathema ought also to have been an obituary, but the old system refused to die, and until quite recently the topic has aroused very little interest. Times are changing, however, the peasant is finding powerful friends in the House of Lords, and also outside it, and, as a necessary consequence, the subject of rural education is at last coming to the front.

The Story of the Past.

In order to appreciate the present position, it is necessary to look back. In India, as elsewhere, popular education is a creature of the towns, and, when the primary school passed to the village, it was as an urban rather than a rural institution. At first the peasant was not in the least impressed by the innovation, and he let it severely alone, caring only to make sure that the teacher should keep his proper position, and not worry decent people with his fads. Then by slow degrees the village realised that the school might serve two purposes, one harmless and convenient, the other a grave potential danger to the country. The first was that of a day-nursery, where small children might be kept more or less out of mischief until they were old enough to help in the fields, and the description is still substantially true of most of the village schools in India, as may be seen from the published figures of attendance, with the crowds in the lowest classes, and the empty benches above. The second purpose served was to get the clever boy out of the village, and turn him into a minor bureaucrat, or at least a candidate for a chair in an office, and this would have done untold harm, if it had been allowed to go on, because the villages need all the brains they can get, while the towns are already overstocked. There is no more piteous sight in all India than the clever lad who has learned to hate his village, and yet is not good enough for the town.

The Hope of the Future.

Hitherto then the village school has done practically nothing for the village, but a third phase is now opening most noticeably in the Punjab, but to a less extent elsewhere. The peasants are beginning to ask for education for their children, and their good faith is shown by their courageous attempts to educate themselves. The great question now is one of quality, and Sir Malcolm Hailey's speech shows that, in the Punjab at least, a beginning is being made in adapting the village school to village needs, that courses are being remodelled on the basis of rural science, and that teachers are being systematically trained on these lines, in a word that those things are now being attempted which that great apostle, Sir Edward Buck, preached so ardently in the 'nineties. The task is exceedingly difficult in itself, and it is complicated by the fact that the politicians, who vote the funds, are at present interested chiefly in mass-production. Increase in numbers at school shows prominently in the statistics which Indian politicians devour, but improvement in quality cannot be fitted into an appropriate column, and its value to the country will not be apparent for nearly a generation. The most urgent thing just now is to educate the politicians, which is the statesman's real work, and, in this age of the formula, we commend to India's statesmen the thesis that the object of the village school is to send boys and girls into the world content to be peasants, but determined to be better peasants than their fathers. There, as we see it, lies the hope for the future.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 25.

One and Fourpence?

"The question between 1s. 4d. and 1s. 6d. is a dead issue." Thus Sir Basil Blackett in reply to Sir Purshottamdas Thakurdass, coupled with an appeal to everybody concerned for a consideration of the matter calmly and without prejudice or attempts to manipulate the currency to the advantage of particular interests. Sir Basil dealt drastically with the supporters of the 1s. 4d. rupee, saying that there is nothing to argue about in the matter of ratio, which is a statement of fact, and he declares that deliberately to start a new and painful period of disequilibrium, in order to try to force the rupee to re-stabilise itself at a lower figure, is simply unthinkable.

The Extremist Victory.

The Swarajists have indeed made good their boasts, and they are entitled to almost as much credit as they claim for themselves. In one or two cases a Responsivist has managed to hold his seat, but in the open elections they have scored crushing victories, the extent of which in the Calcutta areas is indicated by the following voting figures, the Swarajist in each case being placed first: 1,777—261—81; 833—198; 2,110—588. The latter figures refer to North Calcutta, where Mr. S. C. Bose the internee in Mandalay Jail, has defeated Mr. J. N. Basu, who stands for the old order. These figures speak for themselves: the electorate that goes to the polls, far less than 50 per cent. of the people entitled to vote, is overwhelmingly in favour of no Government, is anti-British and is vehemently

Digitized by Google

opposed to what it calls "the bureaucracy," which in fact is merely the executive Government. The writer has talked during the week with members of all parties, and there is ample justification for the assertion of one of the older school of Indians—that the politically-minded Indian in Bengal has become a blind fanatic, with only one idea and that is to "down the Government"; nothing else has had a chance against this slogan. In spite of this it appears that there may be a Ministry of sorts when the Council meets, for against 55 Swarajists, including 9 Muslims, there are 85 other members who have expressed their intention of working the Reforms; this number is made up of 11 Hindus, 30 Mohammedans, 18 Europeans and Anglo-Indians and 26 official and nominated members. So far as the elected members are concerned, there are 55 Swarajists and 59 others; it will be interesting to see what kind of a Ministry comes out of this.

An Alien Serum.

If the inventors of Diarchy ever had any doubts as to the success of their efforts to disturb the pathetic contentment of the masses, they need have so no longer. Bengal has always had its agitators, and its extremists have placed themselves outside the pale of civilised society; but here is a new serum which has energised the remnants and cemented into their ranks nearly all the Indians who take an active interest in politics. *Forward* admits that "unfortunately these are as yet only a small percentage of the total population"; naive *Forward*. But infinitesimal as their proportion may be, the present election results remind us that their influence is by no means on the wane. The half hundred students and hot-headed unemployed youths who have been drumming and singing songs outside the houses of moderate voters, many of them of high caste and leaders in their community, are behaving in a way as foreign to the traditions of Hindu society as the whitest Briton but the results of their efforts have a nominal importance very different from their numbers, and we are in for a further 3 years of agtiation and disorder.

Other Constituencies.

The thirty Muslims who have been elected to the new Council will include both Sir Abdur Rahim, the leader of the Muslim Party, and Mr. H. S. Surawardy, the leader of the Independent Muslim Party, and there is no doubt that the Swarajists will make frantic efforts to divide this section of the Council. The Anglo-Indian community elected the gentlemen who styled themselves "The Two Macs," a house-agent and a doctor; they showed in doing so the same tendency that actuates all Indian political parties, as they rejected a well-known leader who has served them for many years, their only apparent reason being the fact that he had succeeded. Of the areas outside Calcutta there is little to report; the Indians who have interests therein are now returning and their reports are practically all the same. Of politics the agriculturist knows nothing and cares nothing; he knows that two or more people are seeking to obtain some shadowy honour which will confer power upon them, and in a few cases he is induced to make a choice between the people who ask for his vote; the first to arrive promises him a complete remission of rent; the next says the first man is a liar and that he is the only person who can arrange for his rent to be reduced; the third out-Ananiases them both —and so the game goes on; it is little wonder that the rural classes are under the impression that this is a new form of madness which some of his countrymen have caught from the Sahib.

Other Provinces.

Madras has hitherto been pointed out as the one Province in which the working of the Reforms has been carried out with success. Here the Swarajists have made special efforts and have been successful in winning 47 seats out of 95 and thus becoming the predominant party in the new Council. They have already refused to take office and they are powerful enough to prevent anyone else from doing so; they claim, therefore, a great victory for their party. In the Central Provinces the Swarajists are again returned in the majority, and they will presumably prevent the formation of any Ministry here. Bombay will have a Swaraj majority, but will as before form a Ministry. In regard to the rest of India, *Forward* claims that the Swarajists have obtained majorities in nearly every case. Another facet of the matter is the report from Delhi that the Chamber of Princes assumes greater importance every year, both in the public eye and in the minds of the Ruling Princes themselves, and this year the gathering for the next session is larger than ever. Does the Swarajist ever consider what would happen, if the Native State system, which is indigenous to India, were extended to cover the areas in which his influence predominates? Incidentally, it is interesting to read of the possibility that the Gaekwar of Baroda may be greeted on his return from abroad with a hartal; it is good that these things should go round.

Men and Things.

Before the results of the elections were announced, there were intelligent anticipations that the forthcoming visit of Lord Winterton to India this cold weather was a sign of the early appointment of the "1929 Commission." If the Congressites live up to their promises, there will be some interesting material for the Commissions to consider by 1928.

There is practically speaking no inter-communal news this week; Mahatma Gandhi was invited by a correspondent to come out of his retirement and compromise the difference between the two communities, but he has published a statement that he does not see the slightest chance of a successful intervention and he therefore prefers to remain in retirement.

The Corporation decided at its meeting yesterday not to present an address to the Viceroy when he comes to Calcutta next week. The member who led the opposition promised that, if Lord Irwin proved himself a friend of India, his party would consider giving him an address at the close of his term of office.

The Governor unveiled this week a portrait of Lady Sanderson, wife of the late Chief Justice, at the Blind School in the suburbs of Calcutta, which she was largely instrumental in placing upon its feet, and he paid a glowing tribute to her work on behalf of the poor of the city. A Press comment speaks of "her gallant and debonair personality"; a just tribute to a great example of the finest type of Englishwoman, who literally worked till she fell.

An official statement has been issued at last stating that all preparations were made by the Military to welcome the French Army airmen who recently flew to Calcutta, but that a motor car accident prevented them being carried out. Speaking of flying, we notice that the R.101, the new airship, which is to carry 100 passengers, will have facilities for dancing and games on board. Further details are awaited, particularly as to the behaviour of the ship in the monsoons.

Reference was made some months ago in these columns of an action against a Judge of the High Court in respect of his promotion of a company, speculating in land: he has now retired from the Bench and the leader of the Bar, who was the plaintiff, has been awarded Rs.63,000 against him.

The Trivial Round.

The concluding day of the Tollygunge Meeting took place on Saturday last under ideal conditions, and had the horses responded to the faith that the people put in them, it would have been a perfect end to one of the best seasons we have known at the Club; unfortunately in five events the favourites were missing at the stands and the bookmakers are said to have completely recovered from the loss of spirits which has been so conspicuous this autumn.

The M.C.C. continue their matches and in spite of some heavy casualties they are doing quite sufficiently well to hold all the local teams they have met, but whether they will succeed in doing this in Calcutta is another matter;

Digitized by Google

we note that the Maharaja of Patiala is to play for them here. There was another colossal list of local matches last week-end.

There has been a fine military boxing show at the Empire this week, and a crowded house proved that the public consider that genuine sparring is worth watching; the Military charities should do well out of it. "The Peep Show," Reginald Sellick's Company, has opened brilliantly at the Empire and is doing good business.

Competition has spurred the Grand Hotel to bring out a new dance band, as well as a new manager. The latter comes from Shanghai and the former from France; surprisingly enough, although the band is first-class to dance to, its members are also musicians and they are playing chamber music during dinner.

Markets.

The jute market has again passed a very quiet week, and the only business of importance done has been small purchases by mills of European bales. Rates for hessians have declined steadily and apart from a small inquiry from North America demand has been almost negligible. The past week has not produced any improvement in the piece-goods market where dealers still continue to buy only their immediate requirements; inquiry from up-country has again dwindled, with the result that stocks in importers' godowns have increased.

The easier tendency at the sales in London was also in evidence at the commencement of the sale here; but prices firmed up as the sale proceeded and inquiry at the end may be described as active.

On the Stock Exchange a distinctly easier feeling is evident in Government Securities and a number of declines in prices have taken place, especially in 1945-55 and the 1960-70 Loans; later on, however, a few buyers came into the market at the lower level. This was undoubtedly partly due to the Imperial Bank's statements for November, which showed that cash increased by Rs.83 lakhs and trade demand increased by Rs.16 lakhs. The recent keen inquiry for jute shares continued up to a few days ago; but since then an amount of profit taking has taken place, with a resultant relapse in prices from the best. The market opinion is that this is likely to be temporary, considering the amount of money awaiting investment and the general popularity of jute shares. Coals show little change since last week, and the daily inquiry is governed principally by the position of the negotiations in regard to the coal strike at Home. In spite of another satisfactory tea sale here, shares have not responded to any great extent, and in rubbers with the raw material easing slightly prices have remained barely steady; tin shares on the other hand have tended to harden in sympathy with the recovery in the price of the metal.

The Exchange market has been stagnant, with no feature of special interest; ready T.T. remains unchanged at 1s. 5 13-16d. Money continues very easy.

THE INDIAN MAIL.

A Question of Adoption.

A correspondent of the *Bombay Chronicle* contributes an article on the future succession to the throne of Udaipur, which makes rather curious reading. The present Maharana, he says, "is fast reaching his eightieth birthday": and, though he has a son, the latter is over 40 years of age and has no children, which is "a source of great anxiety to the people." The rules about adoption among the Rajputs are strict, and it appears that there are two princely houses in Udaipur from whom the adoption, if made at all, will have to be made. The present Maharana, who himself came to the "gaddi" by adoption, belongs to the junior branch; the then eligible member of the senior branch, who was "a very pious and God-fearing gentleman, but a bit whimsical and quixotic too, refused the offer of kingship." The author then proceeds to give a list of the princes of both houses, from among whom the choice is likely to be made. The junior branch includes four young princes, whose characteristics are thus described. The eldest is a fairly tall and lean man, who looks pale and sickly, but is a good shot; he is good-natured but always suffers from some philosophic doubt. The second is very amiable and public spirited, but feels cribbed and confined; health is his weak point and he is not capable of much endurance. The third is a very shrewd man of affairs, who spends his spare time in meditation; he has wits and it is pleasant to talk to him. The fourth is a raw youth and it is premature to cast his horoscope. There are two "youngmen" of the senior branch—"youngman" and "whiteman" are, it may be noted, always single words in Bengali English. The elder has a fair smattering of English, and is serene and contented. The younger "is a charming youngman. He possesses an attractive personality. He is a keen sportsman. He plays splendid tennis. He has a passion for pigsticking. He loves the thrill of the chase. He is bashful to a degree. He reveres the tradition of his illustrious race. He has brains and speaks English fluently and holds sound views on varied topics."

It is easy to see in what direction the preference of the correspondent lies; though he laments that the education of all the possible candidates has been neglected, and says that the State must see to this, "so that they may rise equal to the occasion if for any of them strikes the hour of destiny." The succession to the "gaddi" of Udaipur, the house with the bluest blood of all the Rajputs, is a matter of very real importance; but it does seem a little premature to discuss it now, in the lifetime of the son of the reigning Prince; even though the present heir apparent has the misfortune to be a cripple and is therefore unlikely to be able to provide an heir of his own. This is a great pity; for he is a very able and charming man, whom everyone respects and likes, and whose sad physical disability everyone deplores.

NOTES AND NEWS.

170, Strand, London, W.C.2,
London, Tuesday Morning.

Sudan Trade Development.

The figures are now available for the trade of the Sudan for the first nine months of this year, and the showing they make cannot be described as other than satisfactory in view of the sharp decline in the price of cotton, which of course now constitutes most of the Sudan's export total. The volume of trade amounted to £E8,976,586 as compared with £E7,481,540 for the first three quarters of the previous year, there being thus the substantial increase in value of £E1,495,046. With the exception of re exports there is an increase under all headings, but it is not pronounced in the case of imports, the value of which was £E4,081,334 as compared with £E3,758,992. Of this total Government imports were responsible for £E1,390,746, an increase of £E265,952, while the value of public imports was £E2,690,588, an increase of £E56,390, imports thus showing an increase of £E322,342. On the other hand exports rose from £E3,349,151 to £E4,535,180, there being thus a fair balance on the right side of the trade account as against an adverse balance of similar dimensions. If the price of cotton had been sustained the figures for the trade of the Sudan this year would have made a remarkable showing, compared, that is, with the figures of the previous year. As it is the figures indicate very plainly the possibilities of the future, when the potentialities of the Sudan as a cotton-growing region are fully realised.

Aspects of the Trade.

It is worth while devoting a little attention to the principal features of the trade. This year, except for those regions which have directly benefited by the development of cotton growing, has not been altogether a good one for the Sudan. Apart from cotton, however, there were increases in a number of the principal exports. Thus the exports of gum rose from 15,121 kantars to 18,992 kantars, while the value increased from £E636,678 to £E722,177. The exports of sesame totalled 9,920 kantars as against 8,071 kantars, the value being £E207,064 as against £E175,819. Then the value of the exports of hides and skins was £E94,717 as against £E69,521. It may be pointed out, *en passant*, that both gum and sesame realised lower prices than in 1925, so that the comparison is therefore the more striking. The list of public imports affords less cause for satisfaction, for while there are substantial increases in imports of a number of food commodities, there is a long list of decreases in imports of other classes of goods, the main exception being motor cars, cycles, and accessories, the value of which was £E52,901 as against £E46,944. Of course the set-back in the market is purely temporary, and is a factor that has always to be taken into consideration in regard to a region which depends for its economic welfare on the products of the soil. As the prosperity accruing from cotton growing percolates more widely through the Sudan the situation as regards imports will undergo a very marked change, and even now the variety of the commodities imported cannot fail to strike the observer as a significant indication of the ultimate prospects of the market.

Egyptian Cotton Position.

Following the last of the American crop reports which was much in accordance with anticipations, comes the Egyptian Government's final estimate of this year's crop, the figures being 7,223,500 kantars as against 6,836,100 kantars in the October estimate. A decision has already been taken for the drastic curtailment of the acreage under cotton for a period of three years, but this increase in the current season's estimate has raised a fresh problem, and while the Government had decided not to intervene further in the cotton market, it now seems very probable that as a result of pressure it may reverse its decision and again try to support prices by this means. Whether much can be accomplished in present conditions by this method seems open to doubt; on the other hand, cotton has now declined so far that it is difficult to imagine that purchases at existing rates will involve any great risk of loss. Obviously the recovery of the cotton market depends on one thing only—the recovery of world trade; and the prospects in this direction are certainly brighter than they have been for a very considerable period.

The Coming Bulgarian Loan.

The numerous and lengthy negotiations in connexion with the Bulgarian Refugee Loan have been completed with the conclusion of a new arrangement at Geneva in regard to the service of Bulgaria's pre-War external debt, and it is now understood that the loan will make its appearance next week. The choice was between that week and the week after Christmas, and while neither period is one that issuers of a loan would normally select, seeing that the public is usually preoccupied with other concerns, it does not matter in this case, for the loan represents a particularly attractive investment, and the demand for it will probably mean that it will be considerably oversubscribed.

The Sudan Plantations Meeting.

The adjourned general meeting of the Sudan Plantations Syndicate, a report of which will be found elsewhere in these columns, was unique in the attendance and the enthusiasm displayed. Of the many meetings I have attended I cannot recall one which has aroused greater interest among the shareholders, and I do not think the large gathering could be attributed to anxiety as to the terms on which the Syndicate's concession had been extended. The serried rows of shareholders were simply typical of the class to which this country owes so much, who by their unstinted support of British enterprises overseas and particularly within the Empire have made possible its prosperity in the past and are the surest guarantee that the requisite initiative will not be lacking in the future. It was a most encouraging spectacle to see this

gathering, and I think it worth while to make this reference to it so that those whose task it is to labour in the Sudan in whatever capacity may realise that there is an ever-increasing public here which is watching their activities with the keenest interest, realising the great achievements that have already been attained in the Sudan and the boundless possibilities held out for the future.

The New Agreement.

The most important feature of Mr. Eckstein's speech was, of course, his survey of the essential features of the new agreement that has been concluded with the Sudan Government. Under the old agreement the Sudan Plantations Syndicate's limit of time was ten years from June 30, 1925, with a problematical extension for four more years, while the area was limited to 300,000 feddans, one third of which had to be planted with cotton. The period of the concession is now extended to June 30, 1950, while the area under the management of the Syndicate is to be not less than 450,000 feddans and may amount to 500,000 feddans. On the other hand the Government is to take a gradually increasing share of the proceeds of the crop, rising to 40 per cent. when the Syndicate's share will be 20 per cent. It naturally follows that the extension of the cultivated area will entail considerable further expenditure, and Mr. Eckstein indicated that in the course of the next few months there will be an issue at a modest premium of sufficient shares to produce the requisite funds. The date of the issue and the terms will be announced later. As regards the year's results it may be noted that at the end of the past year the stock of cotton figured at £2,149,000 as compared with £280,000. This was partly accounted for, Mr. Eckstein explained, by the heavy crop and partly through the contraction of business throughout the country since May last. He was able to state that the cotton was now moving off better, and that the final disposal of the stock was in sight. Mr. Eckstein dealt in detail with the figures for cotton production in the past season, and nothing could beter illustrate the success achieved by the Syndicate than his statement that from four times the area eight times the crop of the preceding season was obtained. As regards the current season the Syndicate has practically the same area under cotton, and it is eminently satisfactory to learn that indications point to a final yield well in advance of that of last year.

The P. and O. Meeting.

The speech of Lord Inchcape at the P. and O. meeting is an event to look forward to, for he invariably has much of interest to say on a wide range of important subjects. Events in the industrial world made this year's meeting of unusual interest, for it was to be expected that he would devote considerable attention to the events which completely upset trade in this country in the spring. Lord Inchcape referred in some detail to the coal strike, and there is not likely to be any criticism of his conclusion that it is high time that trade unionists should be protected against the tyranny with which their movement has become infested. He went on to emphasise the need for a few years industrial peace, and he referred to the campaign of working men initiated by Mr. Havelock Wilson in favour of industrial conciliation, a movement which if expanded he thinks may well prove the country's economic salvation. The shipping industry was of course the subject of considerable attention, and Lord Inchcape made it clear that he is not perturbed by the prospect of new competition on the sea or by air services. The question of the company's Insurance Account came in for only a brief reference. He pointed out that the Board has under consideration the question of treating this fund as a reserve, and that a year hence he might have more to say on the subject.

British Burmah Petroleum.

A considerable improvement in results is reported by the British Burmah Petroleum Company, the net profits being £182,098 as compared with £141,217 and £52,099 for the two previous years, and a dividend is proposed of 7½d. per share as against 4½d. for the previous twelve months. It is to be noted that despite the vigorous drilling programme pursued there has again been a reduction in the gross production of crude oil, and the shareholders will be disappointed to learn that the work of the twelve months has not led to any new discovery.

COMMENTATOR.

BRITISH SERBIAN UNITS.

The Yugoslav Minister in London was the guest of honour of the fifth annual dinner of the British Serbian Units Branch of the British Legion, which was held at the Victoria Mansions Restaurant, on December 4. It was the occasion of a reunion of many notable workers for the cause of Serbia during the War, both in the field and in relief organisations. The president of the branch, Sir James Berry, occupied the Chair.

Replying to the toast of "The British Legion," which was proposed by Mr. Mitchiner, and supported by Mr. J. R. Chappell, Colonel E. C. Heath (General Secretary) said that there were to-day 2,794 branches of the British Legion, and the number was still increasing. The women's section was very active and had 594 branches, of which thirty-two were in the metropolitan area. The Legion was encircling the globe with a girdle of honour.

The Yugoslav Minister, Dr. Jouritch responded to the toast of "Our Guests," which was proposed by Mr. L. E. Barrington-Ward.

The toast of "The British Serbian Units Branch and its President" was proposed by Major Cheeseman (organiser, metropolitan area), and the Chairman replied.

Among those present were Lady Berry, Sir Thomas Lipton, Mrs. Carrington Wilde (Serbian Relief Fund), Mrs. Barrington-Ward, Dr. Alice Hutchinson, Prof. Louise McIlroy, Dr. D. Novakovitch (Director-General, Serbian National Bank), Colonel Ostoyitch, Mr. C. R. Cooke-Taylor (Chairman of Committee), Captain M. J. Kovatchevitch, Rev. C. Hinschliff, and Miss C. M. Marx (hon. secretary and treasurer).

The Trustee Department of Westminster Bank, Ltd., was transferred to new premises at 51, Threadneedle Street, E.C.2, on December 13. The telegraphic address is "Westrustee Stock London," and the telephone number is London Wall 4337.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended November 20 amounted to £E12,327, making the total from April 1 £E209,508. The corresponding totals for the previous year were £E12,541 and £E213,262.

COMPANY NOTES AND REPORTS.

BRITISH BURMAH PEROLEUM.

The report of the British Burmah Petroleum Company shows that the profits on trading totalled £301,846, as compared with £280,992. With the addition of agency fees, a profit of £29,779 on exchange, and interest amounting to £15,642, the total revenue was £349,520, compared with £312,270. The net profit amounted to £182,098, as against £141,217, and the balance available, after providing for reserves, etc., and including taxation refund and balance brought in, is £83,230. The directors propose a dividend of 7½d. per share, tax free on the shares of 8s. each, as against 4½d. per share. Drilling expenditure at the field has been charged to revenue, and amounted to £75,767, compared with £75,000 so charged last year. Notwithstanding the policy of vigorous drilling pursued, the gross production of crude oil has again declined. The work of the twelve months has not led to any new discovery.

ASSAM-BENGAL RAILWAY.

The report of the Assam-Bengal Railway Company for the year ended March 31, 1926, shows gross receipts, including the Mymensingh-Bhairab-Bazar, Chaparmukh-Silghat and Katakhal-Lalabazar Railways, of Rs.1,81,39,581, against Rs,1,61,55,514. The working expenses were Rs.99,03,236 compared with Rs.97,53,568, the ratio of working expenses to receipts having fallen from 60.37 to 54.59. For the company's own line gross earnings amounted to Rs.1,65,12,356 and net earnings to Rs.74,22,732, or 3.82 per cent. on the capital expenditure. The surplus profits up to March 31, 1926, have now been provisionally ascertained, and remittances on account of the company's share, after payment of Indian income tax and super-tax, total £13,263 for eighteen months. Adding interest earned £25 and deducting the dividend at 4s. 2d. per cent. paid July 1, 1926, in respect of the half-year to March 31, 1925, less tax, leaves £10,740. The Board recommend a dividend for the year to March 31, 1926. at the rate of 12s. 6d. per cent., less tax at 2s. 1½d. in the £, carrying forward, subject to income tax, £2,361.

The delegates of the International Navigation Congress were on December 6 officially received and entertained by the Municipality of Alexandria. King Fuad opened the congress last Thursday.

His Highness Mirza Mohamed Ali Khan Farughi the former Zoka ul Mulk, the Persian Minister for War, returned last week to Teheran from Moscow where he has been negotiating for a commercial treaty and the removal of the Soviet embargo on imports from Persia.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows under date December 4 :—

The arrivals of sultanas on the Smyrna market are estimated at 27,123 tons, and the sales to date are put at 25,926 tons.

The demand has been limited during the past three weeks, barely 700 tons having been taken up, mostly for Continental account. Some business has also been done for January-February shipment to Hamburg and Amsterdam, but shippers are covering in slowly, and are experiencing some difficulty in buying owing to the small stock on the market. It is estimated that about 4,500 tons, mainly medium grades, now remain available for export. Choice qualities are practically exhausted.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.
(Particulars of tenders marked L.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Uniform Clothing, Etc.—The Egyptian Customs Administration invites tenders for the supply and delivery of uniform clothing and equipment required for the year 1927-28. January 31. (D.O.T.)

Clothing, Etc.—The Department of Health, Cairo, invites tenders for the supply of clothing, equipment, tents and accessories, hardware, glassware, oils and paints, brushes and brooms, furniture and wooden articles, enamelled goods, copperware, etc., for the year 1927-28. January 20. (D.O.T.)

Clothing.—The Secretary-General, Ports and Lighthouses Administration, Arsenal, Alexandria, invites tenders for the supply of clothing required during the financial year 1927-1928. February 16.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, December 22). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maimyo for Port Said, Colombo, Madras, and Calcutta (London, December 24); s.s. Mahratta for Port Said, Colombo, Madras, and Calcutta (London, January 8).

Bibby Line—S.s. Oxfordshire for Port Said, Colombo, and Rangoon (Birkenhead, December 15).

British India Line.—S.s. Mundra for Colombo, Madras, and Calcutta (London, December 18); s.s. Rajula for Bombay and Karachi (London, January 1); s.s. Mashobra for Colombo, Madras, and Calcutta (London, January 1).

Cunard Line.—S.s. Pavia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Venice, Trieste, and Fiume, also Corfu and Ancona if inducement (Liverpool December 24, Swansea December 29); s.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Glasgow, Swansea and Liverpool about January 29).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 22).

P. and O. Line.—S.s. Razmak for Bombay (London, December 24); s.s. Rajputana for Bombay (London, January 7).

Prince Line.—S.s. Algerian Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (Manchester, December 21); s.s. Soldier Prince for Malta, Alexandria, Syrian Coast, and Cyprus (London, January 5).

Ellerman and Papayanni Lines.—S.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 22); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 31); s.s. Assyrian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 1); s.s. Grodno for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool January 8, Swansea January 11); s.s. Mardinian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, January 12); s.s. Bavarian for Algiers, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 22). * Subject to sufficient inducement. Transhipments.—Algerian ports via Algiers: Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, December 14.

The beginning of the new three weeks' Stock Exchange account saw early this week a slight flicker of improvement in the markets, but it had no staying power. The boom, predicted to follow the end of the coal stoppage, has signally failed to mature; indeed since the coal war ended the trend of prices has been downwards. The explanation is manifold. There was no clear-cut peace; the dispute tapered to its unsatisfactory end, and left the investment world counting the cost instead of rejoicing. Also the end came too late in the year, for the pre-Christmas weeks are notoriously a period of quietude in markets. Moreover, other adverse influences have been at work, including Paris selling and serious apprehensions about the position in China.

Close observers now do not look for any market recovery until the festive season is over. Then some new favourable feature of a definite and re-assuring nature will be required to change the tone of the markets. It is possible that this may be forthcoming in early January, if New Year optimism of the usual kind is reinforced by clear evidence of the trade recovery to which the coal settlements have paved the way. It will, however, need some fairly potent influence to bring about a renewal of activity; for the investing public at the moment is stubbornly inactive. During the present market lull there are two points which the ordinary investor may read, mark, learn and inwardly digest. The first is that the recent lack of speculation has left most markets in a fairly good intrinsic position, open accounts in most sections not being formidable. The second point is that industrial shares in general kept up so firmly during the long coal dispute that in many cases quotations still discount the effects of a substantial trade revival in the months immediately ahead.

Iron and Steel Shares.

This certainly applies in the market for the shares of iron and steel companies. Evidence of the severity with which the heavy iron and steel industry has been hit by the coal stoppage has been forthcoming in the shape of a most unsatisfactory annual report issued by Dorman Long and Co., Ltd., the well-known north-east coast iron and steel makers, which covers five months of the coal stoppage. A heavy debit balance is shown and after payment of debenture interest and nine months' preference dividend a sum of £345,500 has to be charged against the reserve fund. A year ago there was a profit of £222,000. Two other north-east coast companies, the Cargo Fleet Iron Co., and the South Durham Steel and Iron Co., have also issued their reports. In both cases results are highly unsatisfactory in comparison with the previous year, and it has to be remembered that the iron and steel trades were already in a state of depression before the coal stoppage began. The movement of share prices over recent weeks suggsts some optimism as to tions, no progress has been made in the direction of meetdition of many of the balance sheets it is obvious that the companies have a long row to hoe before a return to prosperity in a tangible form can be hoped for.

Hope for Russian Bondholders?

At the annual meeting of the British Bank for Foreign Trade, Mr. C. Birch Crisp, the Chairman, had a good deal to say about economic and financial relations with both Russia and China. As regards the former he pointed out that while in spite of strained relations between London and Moscow, trade between the two countries expands satisfactorily and has now reached large proportions, no progress has been made in the direction of meeting the claims of British holders of Russian railway or municipal bonds. But according to Mr. Crisp there is very clear evidence of a desire on the part of Russia to meet such claims provided friendly relations can be established. Russian exports have been financed to the extent of many millions sterling by the great European banks, and British holders of Russian bonds are mistaken, he thinks, in refusing to make some concessions in the belief that default by Russia in respect of pre-War indebtedness is a permanent bar to her obtaining credit facilities for present and future trade requirements. Mr. Crisp suggests that representations be made to the Moscow Government, setting forth the bondholders' claims upon the Municipalities concerned and thinks that an agent speaking on their behalf would get a hearing. "English capitalists with unsatisfied claims agains Russia should desire closer commercial relations rather than applaud the demand voiced in some quarters for the denunciation of the existing trade agreements."

An Industrial Investment.

As is generally the case, the recent unsettlement in China has had an adverse influence upon the price of the British American Tobacco Company's shares. It is true that the concern has interests in China, but it may be recalled that the Chairman, at the last annual meeting, was not unduly pessimistic on that account. In any case, the company's business is so international in character that it is possible that what it may lose in one direction it may make good in another. Indeed, at the last meeting the Chairman declared that the "business for the first three months of the current year continues to show expansion."

The undertaking has an excellent dividend record, a number of capital bonus distributions having been made. Thus recent profits have been as follows: 1922, £4,400,784; 1923, £4,494,972; 1924, £4,866,266; and 1925, £5,145,238 while ordinary dividends have been declared at the following rates: 1922 and 1923, 25 per cent.; 1924, 26½ per cent.; and 1925, 27 11-12 per cent. At the date of the last balance sheet the issued preference share capital totalled £4,500,000 and the issued ordinary share capital amounted to £16,071445. Since then, however, the capital has been increased by a bonus distribution of one bonus share for every four held and a further issue of ordinary shares of £1 each at par in the rates of one share for ever five held. At the present price the ordinary shares return approximately £5 18s. per cent. free of income-tax and must be ranked as an attractive industrial investment.

Company Meetings.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.

Difficult Conditions for Shipping.

Lord Inchcape's Speech.

Presiding on December 8 at the 86th annual meeting of the Peninsular and Oriental Steam Navigation Company, Viscount Inchcape regretted the Board were unable to place before the stockholders a more satisfactory statement. Like other shipowners, they had encountered difficulties in the past year, but fortunately they had, during the boom time, refrained from writing up their investments in allied concerns, which stood on their books at cost and, with their assets, were worth to-day a good deal more.

Bills payable for new ships which stood a year ago at £6,779,000 stood at September 30 last at £3,906,241, a reduction of £2,872,759, while they held cash deposits from allied companies of about £5,311,000, which were treated in the accounts as a liability although they were really the P. and O. Company's own property. Except a tender which would cost, delivered, £30,000, they had no commitments for new vessels, although they had it in contemplation, when things became normal, to replace some of their older tonnage. Since the year's accounts were closed they had paid off £150,000 of bills for new ships and the sum outstanding was now £3,756,241. The shipbuilders and the discount market had not pressed them, but their determination was to discharge the outstanding bills for new ships as speedily as possible.

Just before the conclusion of the War they had contracted to occupy a certain number of berths in the yards of firms who had built them for years, the slump came, and there was no prospect of building profitable ships at the ruling prices. In these circumstances the contracts were permitted to lapse, the builders refusing to exact any penalty. One good turn deserved another and, when they came to build again for the P. and O. and its associates, the Board's endeavour would be to help those who had helped them. (Hear, hear.)

The Insurance Fund.

The Insurance Account had increased during the year by £49,943, bringing the amount at credit to £3,328,223, from which nothing had been credited to profit and loss, the whole sum being treated as a liability. They could insure their outstanding risks to-day for a very much lesser sum. The Board has under consideration the question of treating this fund as a reserve and a year hence, his lordship added, he might have more to say on the subject.

Working Costs.

For supplies, maintenance and repairs they were paying averagely more by 75 per cent. than before the War. He had lately been scrutinising all the bills, which were staggering, and unless prices came down, passage rates, much to his regret, would have to go up.

China.

Many of their voyages had been disastrously short of cargo and the condition of China had caused serious loss of traffic with that country.

Continuing, his lordship said that he believed antagonism to the British in China was largely due to the sending of our missionaries to that country. Christian missionary efforts among uncivilised peoples were doubtless fully justified, but China's ancient faiths were as sacred to the Chinese as Christianity was to ourselves and the sooner our well-meaning people gave up their crusade in India and China, the better it would be for all. (Hear, hear.) Perhaps, he said, his hearers would think he had no more right to express these views than the Bishops had to barge into an industrial dispute. (Laughter.) He could conceive no more mischievous speech than that delivered by Mr. Lloyd George at Bradford on Saturday last. (Hear, hear.) He agreed with every word of yesterday's leading article in *The Times* and the castigation the ex-Prime Minister received at Nottingham on Monday from the Earl of Birkenhead was well deserved.

Expansion of Passenger Traffic.

Their passenger traffic, thanks to the efficiency of their commanders and the ships' companies, continued to expand in a remarkable degree. No effort was spared to make the table attractive; and the change to the *a la carte* system of meals had been appreciated by passengers. While they got an occasional growl they welcomed suggestions for the improvement of the ships' arrangements. Recently he had received a vehement expostulation against mixed bathing in the steamers. (Laughter.)

On the other hand they received every week a large number of appreciative letters. The cabin and public room equipment, decoration and lighting of recent ships, had been very carefully supervised; the passenger arrangements of many of their older vessels had been re-modelled, and at the same time economy in every direction had been rigidly kept in view.

Value of the Assets.

A recent statement by their accountants showed that the P. and O. Company, if broken up to-morrow, would be able to discharge its entire obligations, and give the deferred stockholders a good deal more than to-day's market value of their holdings. But the P. and O. Company would not be broken up; it was, he said, a national institution and their intention was to go on through bad times, giving good service to the public, in the conviction that good times would come again.

The General Strike.

The general strike, although it lasted only eleven days, involved the company in serious loss. The Kaisar-i-Hind left for Bombay without an ounce of cargo and had to embark her mails and specie at Plymouth. Many of the homeward passengers had to be landed at Plymouth and brought to town by rail. In this they were immensely assisted by the Great Western Railway, and for help in this connexion the Board's thanks were due to their colleague, Viscount Churchill and his executive officers.

The Coal Strike.

The coal strike, his lordship continued, had cost the P. and O. Company over £200,000; coal prices had risen and the inferior quality of foreign coal had greatly increased consumption. Fortunately, nine of their steamers were oil-burners, and they proposed shortly to convert Narkunda and Naldera to burn oil.

While liners had suffered, tramp steamers had benefited by "carrying coal to Newcastle." Forty-nine tramp steamers owned by the P. and O. Company were, under these unnatural conditions, for the moment paying their way.

Freedom for Trade Unionists.

The unfortunate men, women and children affected by the coal strike had suffered much hardship through Cook's consummate folly. His attempt to disregard economic laws had damaged the trade of the country to an extent from which it would take months, if not years, to recover. He observed Cook had now gone to Russia, and was going on to South Africa, doubtless to stir up trouble there. He thought, however, that he (Cook) had shot his bolt. (Hear, hear.)

The extremists who had kept the miners idle for over six months had done as much material damage as could have been wrought by an enemy invader and had, at the same time, sought to destroy the freedom of those whom they claimed to represent.

It was, his lordship continued, high time that trade unionists should be protected against the tyranny with which their movement had become infested, and the promised Government measures should be welcomed by all, unionists and non-unionists alike. There should be an end of picketing. Trade union benefit funds should be separately and independently audited. The members had now only power to contract out of the political levy, to do which made them marked men; instead, they should be exempt from the levy unless they contracted in. If possible a secret ballot of each union should be instituted, not less than three-fifths total vote to be effective either to call or continue a strike. Speaking for himself, he was glad of Mr. Baldwin's decision to withdraw the proposal for a compulsory tribunal, which would only have led to further trouble.

Peace in the Shipping Industry.

During the year under review, the shipping industry itself had run free of strikes. The leader of the Seamen's and Firemen's Union, Mr. J. Havelock Wilson, had recently—he believed with the Prime Minister's blessing—initiated a campaign of working men in favour of industrial peace and conciliation, a movement which, if it expanded might well prove the country's economic salvation.

During the crisis of May last Mr. Wilson, although dangerously ill, had spared himself no risk or effort to prevent his union from being drawn into the general strike, in which he, the speaker, was thankful to say he had been successful. (Hear, hear.) There were

other men, men such as Mr. Brownlie, Mr. J. H. Thomas, and Mr. Frank Hodges who stood out prominently and sanely in labour disputes. If the workmen of the country would be guided by such leaders, there would be a prospect of peace in industry for many years.

A few hair-brained, misguided beings were out to destroy the fabric of Society. They would ignominiously fail. We have, he said, in the homeland, a population of forty millions every one free under the Crown to rise to any position; not a fraction of the people were disloyal to the throne. When we looked around us, there was nothing in the world to equal the British Empire, with, at its head, a constitutional monarch, our beloved King.

Competition.

It was, his lordship continued, prophesied that the Company would be badly hit in a few years' time by aeroplanes and airships. He did not believe it; even if Empire airways became a commercial proposition, which he greatly doubted, the P. and O. would hold its own for many a long day.

He noticed that someone, who so far as he knew had no experience of shipping, proposed to start a company with a capital of eleven millions to run seven twenty-two knot ships to India, Ceylon and Australia. The promoter was a sanguine man. Steamers had a way of going out of commission; accidents happened; overhauls involving a lay-up of weeks or months were essential, and in a regular mail service stand-by ships were necessary. To provide five per cent. for depreciation, and five per cent. interest on capital, would demand a revenue of £1,000,000 a year. He had better put his money into War Loan, which would give him an assured £550,000 a year; his shareholders would never get as much out of the proposed venture. The P. and O. Company with 400 ships and a capital of less than seven millions, found it difficult to provide £500,000 a year to pay its dividends. If the P. and O. and Orient Companies with their experience of the trade, had seen their way to cover expenses and a decent margin, they would have gone in for a twenty-two knot service long ago.

The Suez Canal.

Speaking for the P. and O. group, the largest contributors to the revenue of the Suez Canal Company, he would, he said, like to pay tribute to the courtesy and ready assistance extended by the Canal Company's capable officials to the owners and masters of all vessels passing through that great waterway. The transit of the canal had been shortened; its depth increased; the pilot service was excellent, accidents negligible, and everything done to give vessels expedition.

Punctuality of the Steamers.

Their mail steamers had run with fair punctuality throughout the year. One late arrival was due to a breakdown of the mail train in France and to inferior foreign coal.

P. and O. Bombay-Calcutta Express.

His hearers would, his lordship continued, be aware that a few years ago the Wagons-Lits Company built to the P. and O. Company's design a new type of train for conveyance of the latter's passengers across France. That train, which they subsidised, gave great comfort and satisfaction to P. and O. passengers. Recently the Board had arranged with the Great Indian Peninsula and East Indian Railway Companies to construct two very similar trains to run each way between Bombay and Calcutta in conjunction with the outward and inward P. and O. steamers. They were greatly indebted to the Chairman of the Railway Board, Sir Clement Hindley, to Sir Robert McLean, and Mr. Colvin, agents respectively of the G.I.P. and East Indian Railways, for the enterprise they had shown in the matter. From reports received, the new trains and their general arrangements were proving very attractive.

The Year's Work.

Together with their allies they had had 433 steamers in commission. During the year these ships had traversed 17,000,000 miles of ocean, made 30,000 port entries; carried 15 million tons of cargo, 350,000 animals, and over 2¼ million passengers. The average daily number of their ships' companies was about forty thousand, and the daily expenditure for wages and victualling of their crews was £15,000. It would be difficult to estimate the number of outside men to whom also these ships gave employment. To earn sufficient to cover the vast expenditure of these ships and to provide for depreciation and dividend was an anxious task in these times. They had, moreover, to meet the competition of foreign vessels manned at lower wages than those in British ships.

So far as he was aware the allied fleets had carried their two and a quarter million passengers without the loss of a single life, yet certain officials were pressing new and costly regulations, which it was considered by the Chamber of Shipping would be of no practical utility. The cost of compliance with these regulations would eventually have to be borne by the public and, in his opinion, it would be better to leave the mariners alone.

Sir Geoffrey Clarke, C.S.I.

He would, he continued, have great pleasure later in proposing the election to the Board of Sir Geoffrey Clarke. They could have no better man as a colleague, for Sir Geoffrey knew the work of the P. and O. from A to Z.

Profit Sharing Scheme.

The amount invested in the company's profit-sharing scheme during the year was £300,000, on which interest at 7½ per cent., to be paid at the end of this year, had been charged in the accounts. The scheme provided a simple way of interesting their employees in the success of the company's operations.

Appreciation of the Staff.

As a frequent traveller in the steamers, his lordship continued, he was lost in admiration of the skill and caution which permeated the bridge and the engine-room, between which departments there was now perfect harmony and co-operation, greatly to the comfort of all on board. It was no easy matter, in addition to keeping the engines moving, to maintain in perfect working order the electric light the refrigerator plant, hot and cold water service, the ventilating system, etc., throughout the whole of the ship—with perhaps a thousand souls on board. Under their capable chief medical officer, Dr. Chaplin, they had in the ships a fine body of medical men.

The work of the ships was carried on without noise; the vessels were kept like yachts with every part always tidy and scrupulously clean. Civility and attention to passengers was observed; discipline as a rule left nothing to be desired. The skill, loyalty, and devotion of the staff were assets of which they had reason to be proud.

Some Suggestions.

There were four suggestions which he would venture to make to their passengers: the first, not to leave the bath tap open and the plug in when vacating a bathroom, especially at night—(laughter); the second, to insure their luggage and place valuables in charge of the Purser; the third, to use ash receptacles and not to place burning cigarette ends on the carpets or furniture; the fourth, to jerk their fountain pens on the blotting pads rather than on the floor. (Laughter.) Speaking of this last recently to the wife of one of his colleagues, she remarked: "I am afraid it is a not uncommon practice, even ashore. I frequently have occasion to speak about it to my husband." (Laughter.)

India and the P. and O.

Since they last met there had been a change of Viceroys in India. The Marquess of Reading, after five years' strenuous and successful work, had been succeeded by Lord Irwin, who appeared to be winning golden opinions from all classes of the community. Lord Reading came home and Lord Irwin went out by P. and O. and they had the honour too of bringing Mr. Bruce, the Prime Minister, from Australia. All had been delighted with the ships in which they travelled.

A Personal Word.

He would conclude with a personal word. Looking the other day at the figures he had given them and thinking of the numerous organisations which it fell to his lot to direct and the amount of leisure and recreation he managed to secure—fishing and shooting in Scotland—he realised how much he was indebted to his capable, upright, loyal and, if he might say so, affectionate coadjutors, in this country and all over the world.

Engaged in business from boyhood, he was rarely confronted by an emergency which he had not had to face before. He felt he did little real work nowadays; it was all done for him. But whether at home or abroad, he was kept informed, almost from hour to hour, of all that took place, and invariably had the opportunity to express his views. To proposals put before him his reply in most cases, though not in all, was the one word, "approved." As Nelson said of his captains at the Nile, he (the speaker) and his coadjutors worked together as a band of brothers. To all those associated with him, at home and abroad, he expressed his grateful thanks. Before many years were over he would, he supposed, have to give up the work which he dearly loved. His one ambition was, when that time came, to leave every business of which he was the responsible head, including the old P. and O., in a sound financial condition. (Applause.)

The Chairman concluded by moving the adoption of the report and accounts.

Sir Charles S. Addis, K.C.M.G., seconded the resolution.

The Rev. H. G. Hoare expressed dissent from the Chairman's views on missionary work in China.

In reply to a shareholder, the Chairman stated that under the company's charter the directors' remuneration, divisible among the 15 members of the Board, was fixed at a total sum of £5,000 per annum.

The resolution was carried unanimously.

On the motion of the Chairman, seconded by the Right Hon. Lord Kilbracken, G.C.B., dividends for the half-year ended September 30 last of 2½ per cent., less income tax, on the preferred stock, and of 5 per cent., free of income tax, on the deferred stock, were declared, payable on and after December 10.

The electon of Sir Geoffrey R. Clarke, C.S.I., as a director was approved; the auditors, Mr. F. A. White and Colonel Sir Robert Williams, Bt., were reappointed, and the meeting closed with a hearty vote of thanks to the Chairman and directors and the staff ashore and afloat.

SUDAN PLANTATIONS SYNDICATE.

Terms of New Agreement.

Mr. Eckstein's Speech.

The adjourned nineteenth ordinary general meeting of the Sudan Plantations Syndicate, Ltd., was held on December 8 at River Plate House, Finsbury Circus, E.C., Mr. F. Eckstein (the Chairman of the company) presiding.

The Secretary having read the notice convening the adjourned meeting and the report of the auditors,

The Chairman, who was received with cheers, said: Ladies and gentlemen,—The directors' report and the statement of accounts have been in your hands for some time. I propose, therefore, with your permission, to take them as read.

In moving their adoption at this our nineteenth annual general meeting, I do so with greater pleasure and more satisfaction than on any previous occasion. We have indeed every reason to be pleased, and the reasons for my satisfaction will be apparent when I tell you first that in this its first season the Sennar Dam and the somewhat complicated canal system dependent upon it have worked well and without serious hitch. This achievement is very creditable to the irrigation officials of the Sudan Government and to our engineers and staff who collaborated with them. Secondly, that damage from bacterial diseases and insect pests was very slight; thirdly, that in spite of the high proportion of our tenants who were new to the work we had an exceptionally good crop—a much better crop in fact that we can expect to have every year; and finally, that we have concluded negotiations with the Sudan Government for an extension of the period of our present concession and for an increase of our present area from 300,000 feddans to a minimum of 450,000 and a possible maximum of 500,000 feddans. (Applause.)

Of these areas you will, of course, realise that under our present system of rotation only one-third is grown in cotton in any one year.

This increase has been granted in view of the fact that it has been found possible in practice to make the volume of water allotted to the original project suffice for the irrigation of a larger area. There is thus no reason to apprehend difficulties resulting from opposition in Egypt, since the latter's rights are in no way infringed. There is, I would remind you, a definite allotment of water which cannot be exceeded without prejudice to Egypt, and the possibility of extending our area from 450,000 feddans to 500,000 feddans must therefore depend strictly on the economy in water which can be effected. The project has proved so beneficial to the native tenants on the original area that there has been a growing demand from the inhabitants of the adjacent areas for an extension of irrigation, and the Sudan Government, on their part, feel that this extension should be undertaken forthwith.

I shall give you further details as I proceed. In passing, I will say that in order to secure an extension of the area and of the period of our management we have had to agree to make serious concessions. In all the circumstances, however, I believe that better terms were not obtainable, and that in agreeing to these sacrifices we have acted in your best interests. You will, however, be able to form your own opinion after I have explained to you fully what we have done in this respect.

Opening Ceremony of Sennar Dam.

On Thursday, January 21, this year, Mr. MacIntyre, our managing director, and I, accompanied by some senior members of our staff, as guests of the Sudan Government, attended the official opening ceremony of the Sennar Dam—certainly a red-letter day for us. This dam, two miles in length, a monument of foresight and engineering skill, will stand for all time as an achievement of which the British Empire may well be proud. (Applause.)

The then Governor-General of the Sudan, Sr Geoffrey Archer, in his opening speech, addressing Lord Lloyd, referred in terms of high praise to the work done by our syndicate. He said:—

> "The actual bringing into operation of the canal system—with its great length of new channel and some hundreds of regulators in hands unaccustomed to the work involved—was in itself no easy task having regard to the time available. Within one month of the opening of the canal no less than 75,000 feddans of the 80,000 required for this year's cotton crop had been watered. This result could only have been attained by unremitting exertion on the part of the staffs of Government and of the Sudan Plantations Syndicate, working, I am happy to say, in the closest co-operation. I take this opportunity to acknowledge the good work done under trying conditions by all concerned.
>
> "This afternoon at Barakat, your Lordship will see something of the part which the Sudan Plantations Syndicate is playing in this great enterprise. Here I propose only to allude to the important pioneer work undertaken by the Syndicate in the operation of pumping schemes which prepared the way for the larger scheme of flow irrigation from the dam. Their task, no less than that of the contractors, has been a heavy one, and I would pay a warm tribute to the Syndicate for the highly successful manner in which it has been accomplished."

He added a warm tribute to some members of our staff. (Hear, hear.)

Lord Lloyd's Tribute.

Later on the same day, the High Commissioner of Egypt and the Sudan, Lord Lloyd, in addressing some 8,000 of our tenants at Barakat, and speaking of the completion of the Sennar Dam, was equally complimentary in saying:—

> "The Syndicate has managed the agricultural operations and minor canalisation with a foresight and ability beyond all praise. It has provided a striking object-lesson by training a large number of cultivators at the pumping stations. Most important of all, its relations with the cultivators in general have been uniformly tactful and sympathetic. Without the sure foundation of such sympathy real success would have been impossible. I must congratulate both the Syndicate on their happy choice of staff and their staff on having so completely justified their trust in them."

Ladies and gentlemen, this was a welcome recognition of many years of hard, patient, and at times difficult work done by us. (Hear, hear.)

I dwell on these public utterances because I feel that you, as interested parties in our unique and progressive undertaking, should know what the Sudan Government thinks of us. I may add that on the day following the opening of the Sennar Dam Lord Lloyd showed his interest in our work by motoring through a considerable area of our plantations, and I think I can say that he was much impressed with all he saw.

I again mention this, because it is your Board's justification for all the demands we have made on you in the past to provide us from time to time with additional working capital; and let me say at once that we have not quite finished in this respect, as I foreshadowed at our annual meeting last year and as I will presently disclose.

To the new Governor-General, Sir John Maffey, we tender a respectful welcome, and we express the hope that our work in the Sudan will meet with his approval.

The Balance-Sheet.

Now let us first go through our balance-sheet. Our share capital last year was £600,000; this year it stands at £1,500,000 fully paid. You are all familiar with the reason of this increase, and consequently the share premium account has been reduced from £1,013,000 to £565,000.

Our old reserve account of £22,000 we have increased this year to £50,000. We have done this with the object of gradually wiping out the sums standing against general development and canalisation. As you are aware, we are not entitled to receive compensation for these heavy items of expenditure at the end of our concession. It is therefore incumbent on us to make the necessary provision for their amortisation.

Our pumping installations in the Gezira are now completely amortised.

The amount due to creditors is very much higher this year owing to our large crop. This item is, however, reduced month by month, and will be completely paid off by the time we have sold our entire stock of cotton.

The profit and loss account I shall deal with later on.

Turning to the credit side, you will find Zeidab figures slightly higher, due to purchase of additional ploughing tackle.

Pumping stations in the Gezira, as already mentioned, figure at the same amount on both the debit and credit sides of the balance-sheet. The following items show increases:—

General development by	£11,000
Canalisation by	£9,000
Buildings and furniture by	£3,000
Agricultural implements by	£18,000
Ginning factories by	£122,000
Light railway by	£37,000

Taking these items together, it means that we have spent something like £200,000, which very nearly corresponds with the decrease shown in our holding of Government securities.

Stock of cotton last year was £280,000. This year it figures at £2,140,000.

You are all familiar with the reasons for our stock of cotton being so heavy at the end of the financial year. It is partly accounted for through the heavy crop we have had and partly through the unfortunate contraction of business throughout the country since May last.

It has been our duty to value our then unsold cotton at conservative prices.

In these circumstances we felt it to be the right policy to delay payment of our interim dividend, and, as you will have seen from the directors' report, we are likewise postponing payment of the final dividend for a few weeks.

I am glad to say that our cotton is moving off rather better just now and that the final disposal of our stock is in sight. (Applause.)

Stock, shares, and building materials are £30,000 less this year.

Debtors and debit balances are about the same as in the previous year.

Investments in Other Companies.

As regards our investments in other companies, we have the same holding as before, with the addition of 10,000 further shares of Brazil Plantations Syndicate, Ltd., and of 100,000 shares of Parana Plantations, Ltd. The Kassala Cotton Company was unfortunate last year through having a bad flood of the Gash, so that only some 12,000 feddans were effectively irrigated. They yielded 22,534 kantars of cotton. The whole of this crop—that is 3,658 bales—was shipped home and the greater part of it has since been sold. The

Digitized by Google

quality of the crop was excellent. This year we have had an exceptionally good Gash flood, and an area exceeding 25,000 feddans has been planted with cotton.

But I cannot disguise from you the fact that the average Gash flood will not enable the Kassala Cotton Company to bring under cotton very large areas, such as we and the Sudan Government anticipated. In practice the expectations of irrigable acreage upon which the concession negotiations proceeded have not been fulfilled. We are trying to come to some arrangement with the Sudan Government in this connexion.

The investment in Parana Plantations, Ltd., which I foreshadowed to you last year, has since materialised. Otherwise our holding in Brazilian undertakings are the same as I mentioned to you last year, when I spoke fully on this subject. I have nothing to withdraw from what I then said.

But in the meantime a considerable financial crisis has arisen in that country, caused chiefly through the too rapid rise of the mureis. In San Paulo 297 failures of firms occurred in 1925, while during the first six month of this year 265 firms failed, with liabilities of nearly four million pounds sterling.

This gives you a picture of the present state of business, and you can well imagine that for the time being the power to purchase has died down. No land sales can be effected, nor are we trying to sell anything.

On the other hand, the power of recuperation in a rich country like Brazil is so great that once the pendulum swings the other way trade will re-establish itself in astonishingly quick time.

British Securities.—We hold £396,000, consisting of £400,000 Five and a-Half per Cent. Treasury bonds 1930, against £613,000 last year, and in cash we had on June 30 £117,000, against £90,000 in the previous year.

Profit and Dividends.

Turning now to the profit and loss account, our total receipts amounted to £706,000, compared with £305,000 last year, while our expenses, which include about £20,000 for increase of capital, writings off, bonus to staff and £28,000 placed to reserve account, total £224,000, leaving us with a profit of £482,000, against £163,000 last year. (Applause.)

Out of this amount we have paid you an interim dividend of 10 per cent. in September. We now propose to declare a final dividend of 15 per cent., but again postpone payment until January 13, 1927.

We have made of late good headway in selling our cotton, but we would like to do just a bit more during the next few weeks.

The amount carried forward will be £204,650, against £189,450 last year. (Applause.)

I think this is all I need say regarding our accounts, and I turn to the work done by us in the period under review.

Our Zeidab station, for a change, did not do so well as in previous years. We had under cotton 5,240 feddans and shipped 2,243 bales, all of which are disposed of.

This year we have practically the same acreage under cotton, and we have already picked 12,000 kantars, which is a considerable improvement as compared with last year's pickings at this date. Indications point to a final yield well in excess of that of last year.

In the Gezira we cropped last year 21,616 feddans of cotton, yielding 47,797 kantars, equal to 10,870 bales.

During the financial year ended June 30, 1926, we had under cotton 80,031 feddans, under durra 30,833 feddans, and under lubia 9,178 feddans.

The cotton crop amounted the 384,106 kantars, of which we shipped 89,641 bales to England and sold locally 668 bales, making a total of 90,309 boles.

In short, from four times the area we got eight times the crop of the preceding season. (Applause.) A very happy result, but not a result on which to base calculations of future prospects.

In addition to this we shipped 34,900 tons of cottonseed to England and 1,862 tons sold locally, making a total of 36,762 tons, which are all disposed of at satisfactory prices.

For the coming season we have sown:—

100,057 feddans of cotton,
50,188 ,, ,, durra,
50,000 ,, ,, lubia,

and our latest cables from our managing director tell us that the work done on all the crops has been good.

Owing to cold weather since the beginning of November there has been some setback in the condition of the cotton, but granted warmer weather and favourable conditions for the remainder of the growing season we may look forward to having a good crop.

Period of Concession Extended.

And now, ladies and gentlemen, I come to the really important part of my address and I invite you to give me your close attention.

From the directors' report you have gathered that the Sudan Government are entrusting us with the task of not only continuing our present work for a longer period, but also of increasing the area of our activities.

An extension of time was agreed to on the ground that it would be in the interest of all parties that we should be able to adapt our agricultural policy to a longer period than originally provided. We, on our part, have conceded in exchange a substantial reduction of our share of the proceeds.

May I be permitted to say, at this stage, that in my opinion, quite apart from financial considerations, the Sudan Government are thus setting a good example by making full use of private enterprise to collaborate with them in developing the natural resources of their country. (Hear, hear.) In doing this I venture to say they are right and they will be well served.

I believe that an agricultural and commercial undertaking such as we are engaged in can be better conducted by private enterprise than by any Government, however efficient—(hear, hear)—and that the trained man of business, provided he is competent and has his heart in the right place, and provided he has the confidence of the Government he works for and is supported by the shareholders of the company he serves, will be able to show the best possible results (Applause.)

It will be our endeavour to collaborate loyally with the Government as in the past, and to deserve the confidence which they have shown in extending the period of our management.

Now, under the old agreement our limit of time was ten years from June 30, 1925, with a problematical further four years, and the limit of area was 300,000 feddans, of which 100,000 feddans had to be planted annually with cotton.

Features of New Agreement.

The essential features of the new agreement which we have concluded—it will take some months yet to complete the final document—are as follows:—

1. The period of the concession is extended to June 30, 1950—(applause)—subject to certain rights of earlier termination which I will mention.

2. The area under our management is to be not less than 450,000 feddans, and may possibly amount to 480,000 feddans or to 500,000 feddans.

3. The Government are to complete the major canalisation of not less than 45,000 feddans by July 15, 1928, a further area of not less than 75,000 feddans by July 15, 1929, and a further area of 30,000 feddans by July 15, 1930. It is not improbable that this programme may be accelerated.

4. Our syndicate has to complete within these periods the subsidiary canalisation and the other necessary work.

5. The proceeds of the crop are to be divided as follows:—

		Per cent.
For the seasons 1926-27 and 1927-28 ...	Government	37½
	Syndicate	22½
For the season following the completion of an additional area of 45,000 feddans	Government	38½
	Syndicate	21½
For the season following the completion of further 75,000 feddans	Government	39½
	Syndicate	20½
For the season following the completion of further 30,000 feddans	Government	40
	Syndicate	20

6. The Government have the right on June 30, 1939, or June 30, 1944, at their option, subject to giving one year's previous notice, to take over from the syndicate the management of the whole undertaking, assets and liabilities, Gezira Light Railway, and a reasonable sum for working capital. If this option is exercised, the Sudan Government has to compensate the syndicate adequately for loss of prospective profits, either by a lump sum or by yearly payments.

Provision is also made for termination of the agreement at any time in the event of serious and continued failure by either party to carry out its obligations.

7. Our pumping installations are to be taken over by the Government at an agreed price.

8. The syndicate is to repay the Government the £400,000 loan.

There are, of course, a number of other clauses, including a general arbitration clause in case of disputes.

Digitized by Google

The main features of the proposed new agreement really follow those of the old agreement, inasmuch as the Sudan Government provides the land, the water and the major canalisation, and the syndicate undertakes the subsidiary canalisation, the erection of additional ginneries and arranges for ploughing, marketing of the cotton and seed, and general management as before.

The chief alteration is really the reduction of our percentage of the proceeds of the cotton crop from 25 per cent. to eventually 20 per cent.

In addition to the above-mentioned area, we have come to an arrangement with the Government to put the Hag Abdulla pumping station once more in commission. This means for us a further area of 15,000 feddans, of which one-third will be under cotton.

The conditions of management for this additional area are exactly the same as for the 450,000 feddans.

Now, ladies and gentlemen, I have given you the essential points of the new agreement. The reduction of our percentage and the extension of period and area make it an entirely new business proposition.

Nobody realises more than I do the sacrifices your Board has had to make. On the other hand, we have now a fairly long life in front of us and a larger area, and I ask you to give us the sanction of your approval for our action.

As in the past, your Board will in the future do everything that is possible to make good, and we must hope that the good luck which we have enjoyed in the past may continue to follow us.

Naturally the new work which we have to undertake costs money, and a good deal of money, apart from additional floating capital.

It is therefore the intention of your Board to issue in the course of the next few months, at a modest premium, sufficient shares to produce the requisite funds.

The exact date of this issue and the terms I am unable to fix to-day.

I must not conclude my address without placing on record the obligation under which we are to our staff in the Sudan for the magnificent results we have obtained during the past season. (Applause.)

At our headquarters at Barakat, in Mr. MacIntyre, our eminent managing director, in Mr. Poyntz-Wright, our able manager, in Mr. Archdale, our indefatigable senior inspector, and in all their assistants, we possess a staff as good as can be found in a tropical country. (Applause.) The extension of our operations means for them a heavy additional load of hard work, but all are highly qualified to deal with the difficult problems before them.

You will have noticed that we have set aside a sum of £12,500 as a bonus to our staff.

Having established a provident fund, to which we contribute on the £ for £ principle, we had intended to discontinue these bonuses. But in view of the exceptional efforts which our staff had to make during this first season under the new irrigation system and of our exceptionally good crop, we feel that we ought to make an exception this year, and we trust that you will approve our action. (Applause.)

Ladies and gentlemen, I end as I began in congratulating you on the continued prosperity of our syndicate. The baby born in 1904, after having gone through every possible and impossible infantile sickness, is now a strong youth and will, I hope, in a few more years, obtain vigorous manhood.

No board of directors, however confident it may be, can hope to achieve this result without having the full confidence and good will of its shareholders. This you have given us in the past, and I beg for its continuance.

I now move:—"That the report of the directors and statement of accounts to June 30, 1926, now laid before the meeting, be and that the same hereby are received and adopted."

I will call upon Mr. Asquith to second the motion.

The Hon. Arthur Asquith's Speech.

The Hon. Arthur M. Asquith, D.S.O.: Ladies and gentlemen, I do not think any words of mine are needed to commend to you the adoption of this report and these accounts, but I am glad to have this opportunity of underlining one or two of the remarks which the Chairman has made, and of adding a few observations. It is very pleasant to read in our report of this big jump forward in a single season from 20,000 feddans under cotton to 80,000 feddans, and from 13,000 odd bales to 92,000 bales; but it is probably difficult, if not impossible, for anyone who does not know the local conditions to appreciate the full significance of that from the point of view of the work of the staff, and in order that you may appreciate the justice of the tribute which Mr. Eckstein has paid to our local staff I should like to give you a few details of what this jump forward has involved. To begin with, there is the ploughing. In the Sudan there are no trained mechanics, and if you have to quadruple your ploughing activity in a single season it means that you have to train natives to operate modern ploughing tackle. The syndicate had to do this and to put themselves in a position to plough 1,000 acres a day. Then there is hoeing. This is done largely by bulls, and it was necessary for them to train many hundreds of bulls for this hoeing.

Dunlop Leadership

IN 1888, J. B. Dunlop produced the first practicable pneumatic tyre—which played a conspicuous part in the revolution of road travel.

To-day, the House of Dunlop can take credit for the origination and development of the Wired-type Tyre on the Well-base Rim—the equipment which means welcome simplicity and added safety, and which has won the unstinted approval of the world of motordom.

At the Olympia Motor Show in October 93.02% of British Cars were fitted with

Then there is the subsidiary canalisation. They had to site and to excavate and to equip with regulators several thousand miles of subsidiary canalisation. Then in this season there was a complete change in the system of irrigation. Instead of our drawing water from our own pumps operated by our own people, we had to obtain water by daily requisition upon the officials of the Government Irrigation Department through a brand-new system of canals and from a brand-new dam.

Well, ladies and gentlemen, I think the non-technical may be forgiven if they had their misgivings as to whether something might not go wrong with this new system. One might well have apprehended that there would be bursting of these new canals or that the system of regulation would not turn out in practice to be exactly what it should be, or, indeed, that in some cases the levels might have been taken wrongly and might have been made to make the water run uphill. (Laughter.) But none of these things occurred, and it was a great relief to find that there was not a single defective link in the whole chain of water supply. (Applause.)

Then when it came to picking the crop a light railway more than 100 miles long had to be laid, and it had to be operated by our people; and our people there had to erect, to staff, and to operate four ginning factories, each of them 100 yards long and employing in all some 1,500 peope. Out of these ginning factories every day punctually 750 bales had to be turned out into the waiting trains, and the shipping agents at the ports had to keep pace in the shipping of the cotton.

Well, all these technical operations were carried out absolutely punctually and without any serious hitch. I think that for that the greatest credit is due both to the Government officials—both of the Irrigation Department and the others—and to our local staff, to the railway staff, and to the shipping agents. (Applause.)

But all these technical achievements would have been of no avail if it had not been that the natives had absolute confidence in our young men—our inspectors. (Applause.) They had to sign tenancy agreements with 6,000 new tenants—individual natives—and those agreements would never have been signed if, from the past experience of the syndicate, the people of those parts had not had confidence in being fairly dealt with by our people. (Applause.)

Turning now to the new agreement, there is no doubt that for an enterprise on the scale of this enterprise our old lease was too short. It is very difficult to make your plans with only a certainty of nine years' lease of life ahead of you. The agreement about which Mr. Eckstein has told you represents many months of difficult negotiation, and what you may or may not realise is that on our side almost the whole load of that negotiation fell on the shoulders of your Chairman. (Hear, hear.) In fact, for several months I am sure it is true to say that it took up the lion's share of his working and waking time and thoughts, and I think you will agree that when he says he presents to you this report with more than usual satisfaction his satisfaction is fully justified. He omitted, when he quoted from the late Governor-General's speech at the opening of the dam, the expression of warm appreciation of his (Mr. Eckstein's) personal share in the work, to which the Governor-General then gave utterance, and to those of us who knew the Gezira Plain as it was—an arid waste with a population depending for avoiding famine upon a rather doubtful rainfall; for nine months of the year an absolute dusty, dreary, howling wilderness—to those of us who knew the Gezira Plain in those conditions it may well have seemed a mirage that could never be realised that 200,000 or 300,000 acres of it should be under crops. At this moment the whole area of the original project is fully canalised; 200,000 acres are under growing crops; the population there enjoys contentment and security, and last year £2,000,000 or £3,000,000 has been added to the world's wealth from the cotton crop alone.

Now, that is due in larger measure to Mr. Eckstein than to any other single individual. (Applause.) With the faith of a pioneer in the future he has nursed the syndicate through its long and sickly childhood. He has throughout inspired its staff with his own cautious optimism and youthful zest, and I am sure I can speak on behalf of his colleagues as well as myself when I say that our only hope is that he may long continue to guide its fortunes. (Applause.) Ladies and gentlemen, I have great pleasure in seconding the resolution. (Applause.)

The Chairman having replied to questions, the resolution was put to the meeting and carried unanimously.

The dividend recommended was declared; the retiring directors (the Right Hon. the Lord Lovat, K.T., Mr. J. Arthur Hutton and the Hon. A. M. Asquith, D.S.O.) were re-elected, and Messrs. Cooper Brothers and Co. were reappointed auditors.

Presentation to Mr. Eckstein.

Mr. E. Hall Craggs: I should like, if I may, to detain the meeting for just a minute or two. We have heard the graceful tribute of Mr. Asquith, as a member of the Board, to our Chairman, and I have pleasure in rising to propose a motion which I believe will be welcomed by the shareholders present as giving expression to their appreciation of the very special services of our Chairman. (Hear, hear.) The resolution is as follows:—

"That this annual general meeting of the ordinary shareholders of the Sudan Plantations Syndicate, Ltd., considering the present to be a suitable occasion for showing their great appreciation of the exceptional services rendered to the company, and also to the Empire, by their Chairman, Mr. Frederick Eckstein, have, therefore, resolved to ask his acceptance from the company of his portrait painted in oils by an eminent British artist, as a token of their esteem, and as a memento of their admiration of his leadership in a great enterprise, beneficial to the shareholders, to the Sudan and to the British Empire."

In 1906 Mr. Eckstein took his first year of office as chairman, and later I believe he largely reduced his personal "area" of operations for the purpose of devoting almost his whole energy and activities to this corporation. (Applause.) In addition to giving his guidance to the Board he has made no fewer, I believe, than 12 extended journeys in the Sudan, under conditions not unaccompanied by difficulty, in connexion with this company's operations. In the meantime the original capital of the corporation of some £80,000 has increased to £1,500,000, well employed and remunerative, and you will realise all that that means to those who are here present and the Sudan. We now recognise that under the leadership of our Chairman this great corporation of ours, now great, formerly so small, while giving a reasonable return to its shareholders, has marched with the Government of the Sudan in the tasks of improving and developing the territory for which it has assumed great responsibilities, and in raising the standard of life of the people who are native of its soil. (Applause.)

Tribute to the Chairman.

Mr. Irving Albery, M.P.: Ladies and gentlemen, I should like to have the privilege of seconding the resolution which has just been moved in such appropriate terms. I may state, to start with, that I have the advantage of having known personally your Chairman for many years, and I say that only because I do not think that anyone who has not known him personally can quite realise how much this work has meant to him and how much he is devoted to it. (Hear, hear.) I believe he has been influenced in this work by three principal interests. The first has been his great love of the work; the second the interests of the shareholders, the staff, and the tenants; and the third, and not least, the interests of the British Empire. (Applause.) I hope that one of his colleagues on the Board will put this motion to the meeting.

Lord Lovat: Ladies and gentlemen, this has come as a complete surprise to the whole Board and, most of all, to Mr. Eckstein, and if you will allow me, as one of his older supporters and colleagues, to do so, I will now put the motion to the meeting.

The motion was carried with acclamation.

The Chairman: Ladies and gentlemen, I am absolutely at a loss for words to thanks the proposer and seconder of the motion which has just been carried unanimously for what they have done. It is really very difficult; this proposal has come so unexpectedly that I am really unable to express adequately what I feel and how much I thank you. It has been truly a labour of love for me—this Sudan Plantation work. (Hear, hear.) It has enabled me to do something for the Empire. (Applause.) I cannot say more than that. Ladies and gentlemen, I thank you most sincerely. (Applause.)

On the motion of Mr. R. J. N. Neville, M.P., seconded by Mr. W. McGillivray, a cordial vote of thanks to the company's staff in the Sudan was carried unanimously, and the proceedings then terminated.

IMPERIAL CHEMICAL INDUSTRIES.

The registration of Imperial Chemical Industries, Ltd., was formally completed on December 4. The company has been registered with an authorised capital of £65,000,00. As has already been announced, if all the shareholders of the merging companies exchange their shares for shares in the new company the issued capital will be £56,802,996. Amongst the objects of the company are, acquiring or holding shares in Brunner Mond and Co., Ltd., Nobel Industries, Ltd., the United Alkali, Ltd., and the British Dyestuffs Corporation, Ltd. The first directors of the company will be:—Sir Alfred Mond, Bart., M.P. (Chairman); Sir Harry McGowan, K.B.E. (President and Deputy Chairman), Lord Ashfield, P.C., Sir John Brunner, Bart., Mr. G. C. Clayton, C.B.E., M.P., Mr. H. J. Mitchell, Mr. Henry Mond, Sir Max Muspratt, Bart., Mr. J. G. Nicholson, Lt.-Col. G. P. Pollitt, D.S.O., the Marquess of Reading, P.C., G.C.B., G.C.S.I., G.C.I.E., G.C.V.O., Sir Josiah Stamp, G.B.E., Mr. B. E. Todhunter. The company has the biggest initial capital of any company hitherto registered in this country.

The Egyptian Chamber on December 8 passed a law limiting cotton acreage to one-third during 1927 and the following two years.

The contract for the repair at Ismid of the Yawuz, formerly the German battle-cruiser Goeben, has been signed by the Turkish Government and the Société des Forges et Chantiers de St. Nazaire.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended December 2 state:—

Since our last report the futures market has been active, but prices are appreciably lower. The week's summary of price movements is as follows:—Sakellaridis: January, 24.70 dollars, 1.10 dollars down; March, 24.77 dollars, 1.09 dollars down; May, 24.95 dollars, 1.13 dollars down; November 1927, 25.70 dollars, 1.30 dollars down. Ashmouni: December, 15.97 dollars, 1.01 dollars down; February, 16.33 dollars, 1.04 dollars down; April, 16.66 dollars, 1.01 dollars down; June, 16.86 dollars, 1.11 dollars down; October 1927, 17.45 dollars, 0.97 dollars down.

Sakel.—The decline in price this week can be put down to pressure by the local bears, encouraged by the weakness in New York. The speculative short position is, for the time being, not large, but in view of the fact that prices have so easily given way, it is not at all unlikely that we shall see this short selling rapidly increase in volume.

The arrivals recently have been very heavy. On the other hand, exports are well behind those of the corresponding period last year and the local stock is attaining big proportions. The demand from abroad has been fairly good both from England and the Continent. America, on the other hand, keeps out of the Sakel market.

Uppers.—The market for this variety has been rather better than the Sakel market by reason of the continued good trade demand; Uppers are now cheaper than long staple American and spinners are supplying their requirements in the cheaper market.

At the first December tender, 27,250 kantars dockets were issued, but they were quickly stopped by export houses and the tender, heavy as it was, consequently had no effect on the market. The week's receipts amount to 401,616 krs. against exports 238,513 krs.; the stock in Alexandria stands at 2,737,290 krs.

The official figures of arrivals and exports for the period September 1, 1926 to November 25, 1926, are as follows:—arrivals: Lower Egypt 1,720,000 krs., Upper Egypt 1,364,000 krs., total 3,084,000 krs. export: Sakel 623,939 krs., Ashmouni 902,336 krs., various 91,549 krs., Total 1,617,824 krs.

Spot.—Minet el Bassal this week has been active and a good business has been done, spinners' inquiry being on about the same lines as last week. Sales amount to about 27,600 bales, of which we estimate 11,100 bales Sakellaridis, 15,000 bales Ashmouni and Zagora, 1,100 bales Pilion, 400 bales White and a few bales of Brown.

Sakellaridis.—A good business has been done and all styles have changed hands. Spot differences are inclined to ease for Fully Good Fair and the grades below, but are without change for the better qualities.

Ashmouni and Zagora.—Though Zagora continues rather out of favour, except for the top qualities, Ashmouni of all grades continues in good demand with spinners and a good business has been done. Spot differences are without much change, but the medium qualities are inclined to harden slightly.

Pilion: continues to attract a good demand from spinners, mainly for the better grades. Spot differences are without much change except for Fully Good, which has eased slightly.

Brown.—A few bales have been done at about last week's spot differences.

White.—A good business has been done. Spot differences have eased somewhat for Casulli, etc., but are slightly stiffer for Fathy.

Up-country.—There is nothing special to report. The fresh decline in values has restricted business to some extent, as the growers and merchant who are not in urgent need of money are not diposed to accept the lower prices. The ginning yields for all varieties are this year distinctly higher than they were last year, and this, together with the fact that a good deal of cotton was produced during October, leads us to estimate the crop at about 7,500,000 kantars.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended December 8:—

Egyptian Futures.—Sakel Contract.—With the features operating against this market, and to which we have been drawing attention for some little time, coming into more marked effect, values during the early days trading began to show increasing weakness, culminating in the level breaking through a shilling on Saturday. Throughout this period, apart from there being a decided absence of trade support, stop-loss orders became uncovered, and, whilst some active "short" covering was in operation, contracts required for this purpose were not in sufficient quantity to prevent anything but an occasional halt to the decline. No doubt, also, the weakness then in evidence in the American market did much to reduce or to cause the withdrawal of limit orders by those who favoured down scale purchases. In addition, at this stage our market received little assistance from Alexandria; in fact, on the contrary, holders at the other side appeared to have become somewhat panicky. A rally in New York over the week-end appeared to change the tone completely in both the overseas and local markets and was the signal for a smart reaction, which has held up to the time of writing.

Whilst the turn-round that has been witnessed during the last two or three days may ultimately be justified, there is nothing very tangible in the present situation, except perhaps the stronger tone recently witnessed in the American markets, to give one the opinion that the course of the market has been definitely changed. The off-take for fine cottons continues to be quite inadequate to prevent supplies weighing heavily, the open "short" interest is comparatively small and our premium over competitive growths still remains relatively too dear.

The only feature of statistical importance that has cropped up has been the publication of the Alexandria Produce Association's final crop figure. This is 7½ million kantars, a total somewhat below most of the private estimates received.

At the present juncture, we have no very definite view of the outlook. On the one hand, we think that prospects on the "short" side are rather limited and somewhat risky, owing to the fact that our market is running practically level with Alexandria and also at a heavy discount with spot values. On the other hand, we cannot visualise within the immediate future sufficient trade support being enlisted to warrant any advance of importance. The most favourable alternative to our mind is to purchase on weak markets and take moderate profits if the course of the market runs that way.

Upper Contract.—With further reductions in the basis bringing the tenderable qualities close to the contract, a fair amount of hedging operations were put through during the interval of our last report and the week-end. With little support of either a commercial or speculative character in evidence prices under this pressure declined sharply. More recently, however, with the influence of a firmer tendency in the American departments, the list has steadied up somewhat, to-night's close showing losses of 26 to 40 for near and 26 to 28 for distant positions.

Egyptian Spot.—The renewed weakness of the American markets has had a dispiriting effect on trade in the Egyptian section. Buyers have been holding off for the most part, and it has only been during the last two days, during which a steadier tone has been noticeable, that the slightest sign of trade interest has been remarked. We are, at the moment, on the eve of the final U.S.A. Bureau Report, and it is to be hoped that once the final figures have been published the situation may become

Digitized by Google

clearer and both buyers and sellers may see their way to get down to real business again.

The week has been signalised by renewed rumours of Government intervention in Egypt, but beyond causing a temporary rise of a dollar (which was lost again almost immediately) this caused little sensation. The Continental inquiry, which had shown improvement a few weeks ago, has again petered out, and reports from across the Channel make no better reading than those from our own consumers. A considerable divergence of views exists on our market as to the value of cotton to-day and probably spinners have adopted the right course in keeping out of the market as far as circumstances have permitted.

The local inquiry has been of a very poor character, until to-day, when the demand broadened out considerably. Sakel and Upper have both been in fair request at odd times, but it has been very difficult to place any cotton unless at a substantial discount with the current quotations, particularly Sakel cotton. Good to Fine cottons have been neglected and the basis for these has given way somewhat as compared with the lower qualities. Searching for bargains amongst "inferior" grades has continued to be a feature, and some merchant-buying of White Sudan has been noticeable. Owing to the cheapness of "outsiders" generally the basis for the last-named has weakened considerably. The Sudan Sakel, which was tendered last week, has been freely offered and has met with fair offtake at a basis satisfactory to sellers. Pilion at from 10.50d. to 11.50d. has moved off in small lots.

Forwardings to spinners for the week ending 3rd inst. were returned as 5,156 bales Egyptian and 1,394 bales Sudan. Estimated sales, 1,000 Egyptians and 1,200 bales Sudan. Quotations of Sakel have been reduced 50 to 70 points and those of Uppers 45 to 50 points. F.G.F. Sakel to-day, 13.60d. F.G.F. Upper to-day, 9.15d.

In the first six months of this year, 380,733 tons of cement were exported from Yugoslavia.

The value of the mineral output of Roumania in 1925 was 9,190,733,736 paper lei as against 7,893,577,696 paper lei for the previous year.

The Roumanian export duty on hemp seed has been reduced from 30,000 to 15,000 lei per truck load of 10 tons, and that on barley from 20,000 to 12,000 lei.

It is announced that the first of the de Havilland Hercules machines, which Imperial Airways is to use on the new Cairo-Baghdad and Karachi air service, will leave Croydon on December 18, probably at dawn.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The French in Syria.

Without any spectacular achievement in the military sphere, M. Ponsot, French High Commissioner in Syria, has been able to register striking and very welcome progress in the pacification of the country. The insurrection was, no doubt, ready to collapse at the time of his arrival in Syria; but their innate stubbornness and suspicion prompted the Druses to hold their hand until they had discovered the kind of man with whom they had to deal in the new High Commissioner. They were quickly reassured by those of their own number who had made their submission, and at the same time they will have noted the different atmosphere in Syria itself that resulted from the new régime. M. Ponsot in the short time during which he has been in the country has been at pains to visit every part of it and to get to know the people. The personal touch, as almost invariably in the East, has worked wonders, and, provided that M. Ponsot's views and acts are not overruled, there would seem to be a good prospect of Syria's beginning the new year at peace with itself. Reports from Paris to the effect that yet another change in the High Commissionership of Syria was contemplated revived the belief that Fate still had a grudge against the French in Syria; but the assertion that General Weygand was about to be re-appointed to Beyrout has been contradicted. General Weygand's term of office was the brightest episode in the history of France's Syrian Mandate; yet it would have been a strange proceeding to supersede the new High Commissioner who had shaped well from the very first. Even after the denial of the reports, it seems unfortunate that M. Ponsot should find it necessary to be absent from Syria at such an early stage in his High Commissionership. It is announced that he will be leaving for France at the end of the month; but no reason for the step is given. It may be that the promised developments in Syria are so significant in the eyes of the French Government that it feels obliged to discuss them personally with its representative. The Druses, and the Syrian Nationalists, however, until they are reassured by the course of events, will be set wondering whether, after all, their understanding with the High Commissioner is to hold good.

Glass Houses.

There would seem to be a tendency in French circles in Syria to suppose that comments on the course of events in that country coming from a British source are necessarily inspired by some form of ill-will or uncharitableness. The truth is that, from the day when the British troops who had occupied Syria handed over the country to the French, there has been an attitude of complete detachment towards Syrian affairs on the part of the public in Great Britain. No doubt, some of those who had helped to drive the Turks out of Syria were reluctant to leave the country before they had had time to assist in its settlement; but British public opinion has never hankered after the Syrian or any other additional Mandate, nor has it had any other desire in regard to Syria than to see the French make a success of their task. If it has been inclined to be critical, it was only because prolonged unrest in that mandated area tended to react on the neighbouring countries of Palestine and Iraq, by arousing sympathy for the Syrians in their long struggle. Every allowance has been made for the French in the more difficult position that the Syrian Mandate had created for them; but criticism fastened merely on those points which had been freely denounced in France itself—the frequent changes of the High Commissioner, the appointment, to serve merely political ends at home, of General Sarrail, the delay in reinforcing native forces by French troops, the introduction of the French monetary system, the bombardment of Damascus, and the policy of making concessions to Syrian nationalism which offered much in the letter, but yielded little in the spirit. It is urged by the

Digitized by Google

French that they have really carried out the mandatory system more thoroughly in Syria than the British have in Palestine. On paper this may be so; but it would not seem to be the opinion of the Permanent Mandates Commission when examining the situation in Palestine in the light of the actual terms of the Palestine Mandate. That document accepted the special position of the Jews in the country, and the Mandatory Power was required to reconcile the two conflicting elements. British attempts to carry out this work by the gradual introduction of representative government have been open and above-board. They have been frustrated by the *non possumus* attitude of the Arabs, acting, equally openly, in what they conceived to be their best interests. It was an honest difference of opinion, not entailing, as far as can be seen, the bitterness that led to the armed outbreak in Syria, and the general correctness of the British attitude is now being confirmed by the tendency of the Arabs to abandon the mistaken policy of non-co-operation. Great Britain, it can safely be said, has no other desire than to work hand in hand with France in the fulfilment of their mandatory tasks, in the spirit of their joint agreement to promote Arab interests.

The Yugoslav Crisis.

As was anticipated in these pages, reflection in Yugoslavia has shown the Italo-Albanian Treaty to be a far less alarming matter than it appeared at first. Some irritation remains, if only because the Italian Government failed to do a friendly act by giving previous notice to the Yugoslav Government before the Treaty became public property. Italy on this point can claim that there was no precise obligation to do so; but the fact remains that the action would have done much to improve the relations between Italy and Yugoslavia, and to make the agreement between the two countries regarding Albania a real factor. Yugoslavia, however, finds her domestic situation of greater urgency at the moment than the Tirana Treaty. The death of M. Pashitch has lessened political bitternesses for the time being, and the various leaders are actuated by a desire to sink personal differences as far as possible in an endeavour to promote the national interests. The political situation, however, is complicated by the absence of any clear parliamentary majority, and differences of opinion inevitably arise on the advisability of fresh elections. Although the Radical Party seems ready to unite its sections in support of M. Ouzounovitch, the latter has still to look to another party to give him the necessary majority in the Skupshtina. The Raditchists are too numerous to be ignored, but, in spite of a fresh accession of reasonableness on M. Stefan Raditch's part, there can be little enthusiasm in any quarter to see him take his seat again in the Cabinet. On the other hand, he has proved as a free lance too dangerous to every Government in power to allow his advances to be lightly rejected. The delay in the formation of the new Government is an indication of the difficulties in the path both of the King and of M. Ouzounovitch.

The New Greek Government.

The "Business Cabinet" in Greece under M. Zaimis has lost no time in setting to work on the formidable programme confronting it. At the opening meeting of the Chamber the proceedings threatened for a moment to be stormy owing to the President's ruling that the oath had to be taken without comment or reservation. As the oath entailed the swearing of obedience to the "Republican Constitution," the Royalist deputies desired to explain any seeming inconsistency on their part. In the end, when a Deputy had called attention to the fact that everybody would be swearing obedience to a document that embodied for them the right to reject it or to modify its terms, the anomaly of the situation was appreciated, and the oath was taken with such reservations as each party or individual deputy thought fit to make before its administration. The Prime Minister, in his formal statement of policy, after calling upon the Chamber to expedite its revisionist work, set in the forefront of the Government programme the immediate suppression of the "anomalies" which had long been manifest in the Army. This project has since been submitted to the Chamber and been accepted by it. Other items on the programme were a wide local administrative autonomy with administrative decentralisation, and the financial question. The Government's first care was to be to establish budgetary equilibrium, and an era of strict retrenchment was promised. In foreign affairs Greece was committed to a rigorously pacific policy; good relations would be cultivated with all countries, but "these relations will naturally be easier with peoples linked to Greece by traditions of the past or common interests, whether neighbours or not."

Cyprus and English.

There is much in the Report issued by the Colonial Office on Cyprus in 1925 that repays careful reading. The chief impression gained from a perusal of the official statement is that steady headway is being made in the material advancement of the island. Progress has, admittedly, been delayed and has hitherto been slow. Yet there must necessarily be limitations in the case of a community of only 330,000 people, the majority of whom are agriculturists. Of other units in the Empire Cyprus most closely resembles British Guiana and Newfoundland in point of population; the former is more than twenty times the area and has nearly three times the trade, while the latter with forty times the area of Cyprus, but seven-eighths of her population, has more than four times the trade. The absence of capital for the development of the island is a prime reason, and for this feature the indeterminate position of the island in the past has been in part responsible. If Great Britain has neglected Cyprus financially, she has at least not exploited the island for her own ends. The connexion with Great Britain is of nearly fifty years' standing; yet in the latest Report we read: "The knowledge of English is becoming more widely diffused, and, save in the most remote villages, there is usually to be found someone who can speak and even read and write that language." The explanation is given elsewhere in the Report: "Education in Cyprus is not compulsory, and the control of the schools is left in the hands of the various religious communities." *Pari passu*, it is to be hoped, with a wider diffusion of the English language will come that interest in the island from the country to which Cyprus must look for the financial resources necessary to her adequate development.

GREAT BRITAIN AND THE WAHHABIS.

Two Powers alone during the last few years in Arabia have increased their prestige: Great Britain and the Wahhabi State. Take these two authorities away, and little indeed is left to this historic land. There is no one, unless one should care to include the Imam Yahya of the Yaman, who does not seem very likely, from his remote fastnesses in the south-west, seriously to disturb either the British or the Wahhabi Empire, who can now claim to hold sway outside the mandated territories but the King-Sultan of the Hijaz and Najd, or his subordinates. It is a tremendous fact, this rise of Ibn Saoud to undisputed pre-eminence in the Arabian Peninsula—again we omit the Imam Yahya, whose mountaineers would be as ill-suited to sovereignty in the low-lands of the Hijaz and the Najd as the Wahhabi warriors would find themselves in the highlands of the Yaman. Nor is it possible to ascribe this enormous ascent to authority on the part of Ibn Saoud as due to anything but his own efforts, in which may not unreasonably be included the follies of his adversaries. But the remarkable feature of this fulfilment, which is one not only of ambition but also, it may be said, of mission, is that Ibn Saoud has not lost touch with reality. He is at once, and in the highest sense of each word, a materialist and an idealist. The fact that such a man is the cynosure of Islamic eyes, both neighbouring and distant, is in itself of sufficient importance to the British Empire that continual efforts should be made to keep on friendly terms with him; and in this instance the general reason is reinforced by the particular. Ibn Saoud controls the spiritual homes of a hundred million British subjects; and he is also a neighbour of Great Britain—in the sense that Iraq, Palestine, and Transjordan are not yet independent States. It is good, therefore, that a revision of the circumstances (one need think only of what Ibn Saoud was when towards the end of 1915 he signed a Treaty with the British at Ajer and of what he is now) should have been undertaken at the end of last month, at Abyar Ibn Hassani.

Of the precise nature of the discussion between Ibn Saoud and the British representatives we are unaware, but it is probable that both the larger and the more detailed aspects of the relations between the Wahhabi State and the British Empire will have been discussed. It has been suggested that such details would concern the vexed problem of tribal borders, which for many years troubled the respective Governments of Baghdad and Riyadh, and which is still, as was to be seen in the recent Shammar raid upon Kuwait, a pressing anxiety; the future of the Hijaz Railway—in which other countries besides the Hijaz and Great Britain are concerned; the Transjordan-Hijaz Frontier; trans-Red Sea communications; and possibly the world-important question of making the Hijaz a purely Muslim State, whereon no non-Muslim should ever set foot. Now upon the first point, it is undoubtedly of extreme importance both to the Iraq Government and to the authorities at Riyadh to come to an understanding on the precise balance to be maintained between international and desert law, both of which have been claimed as defence by the parties concerned. Not yet, it would seem, is peace to be preserved by those Arabs who, formerly under Ibn Rashid, were conquered by Ibn Saoud in 1921, but who in order to continue indulgence of their age-long pastime of raiding, took refuge within the borders of Iraq. It appears scarcely probable, moreover, that the British representative in the Hijaz should have been called upon to settle what is primarily an Iraq-Najd problem. The second point, that pertaining to the ownership of the Hijaz Railway, is manifestly a very delicate matter. Apart from the religious aspect, there is the very definitely commercial aspect to interest the Wahhabis. The Hijaz is enabled to live, as is well known, mainly through the pilgrim traffic. At present much of this traffic is, so to speak, tapped before it reaches the Hijaz, in Syria and Palestine and Transjordan; but it should not be supposed that the agreement which the British and French Governments reached in 1923, when the Hashimite family was still in the Hijaz, is invalid because the present terminus of the Hijaz Railway, Madina, has changed hands in the meantime. Recognition of this Railway's unique position should not be beyond the common scope of the Wahhabis and of the representatives of the mandated territories from Damascus southwards. Upon the question of the Transjordan-Hijaz frontier, with which, of course, the Clayton agreements with Ibn Saoud did not deal, it is improbable that the last word has been said. The disputed incorporation in 1925, of Maan and Aqaba within the mandated State of Transjordan, can be interpreted either as a simple act of annexation taken while the Wahhabis and the Hashimites were at war, or as a prudent move on the part of the British authorities towards a section of the world in which they had hitherto shown neither strategic nor legal interest. It is true that the restoration of these two places was recommended by the recent Grand Conference at Mecca; but it is also true that for that recommendation the Turkish and Afghan delegates significantly abstained from voting. The ultimate future of these places, which ex-King Husain, like King Ibn Saoud, always claimed as genuinely Hijaz territory, is uncertain. On such a purely commercial matter as Red Sea cables agreement with the Wahhabis should be easy: that would appear to be a mere matter of business. Finally, there is the tremendous question of the making of the Hijaz a solely Muslim country. So vast a supposition may take some people's breath away, and on the face of it it would seem odd that a Power which is willing, perhaps anxious, to have such things of the West as motor-cars and railways should also favour the exclusion from the Muslim Holy Land of all non-Muslims. This point concerns the whole future of Islam, whether it is to be reactionary or compromising, a reversion or a conversion. It is hardly safe to say that even a majority of Muslims would prefer the Hijaz denuded of all but Mussulmans. But until they do become of the same opinion as the Wahhabis, it is probable that at least a handful of Christian representatives will be found at various points down the Red Sea Coast.

The prospect of permanent Wahhabi sway in Arabia lies mainly, as we see it, in the harmonising with rather than the imposition upon the rest of the world, Muslim and non-Muslim, of its present views. In this connexion the increasing ties of the Wahhabis with a modern Islamic Power, Egypt, are of significance. As our Hijaz Correspondent recently observed, the Egyptian *hajjis* were this year exceptionally numerous, and the visit of the Amir Saoud to Egypt was but one of many signs which denote the bond between what are possibly the most enterprising and the most learned of Islamic States. That the regeneration of Islam is the capital aim of Ibn Saoud is not to be doubted, but he is not likely to think that this can be accomplished without the aid of the rest of the Muslim world; his reliance on and close ties with the Sunni Powers are, therefore, to be welcomed by all well wishers of Islam. In sectarian controversies within Islam it is no part of Great Britain to interfere; but it is of the highest importance to establish good relations, in view both of our local position in the Middle East and of our general character as a large Muslim Empire, with the present custodian of Islam's Holy Places. The British Government is, then, to be congratulated upon having taken this timely step towards recognising and regulating the changed fortunes of Ibn Saoud.

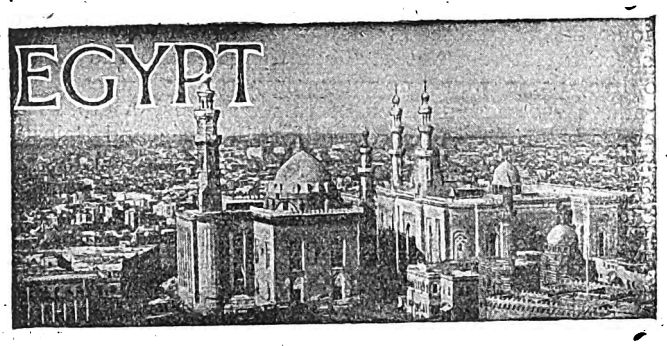
The Near and Middle East*

From Our Own Correspondents.



Cairo, December 11.

The Turf Club.

An extraordinary general meeting was held this week at the Turf Club with Lord Lloyd in the Chair to consider what steps should be taken in regard to the lease of the Club which will expire in 1933. The proceedings were naturally entirely private, and to say what decision was come to would, of course, be an indiscretion. It would, however, be a thousand pities if the Turf Club found itself compelled to give up its present site, since it constitutes such a link with British work in Egypt.

When your Correspondent arrived in Cairo, twenty-five years ago, there were four recognized British landmarks:—All Saints' Church, the Headquarters of the Army of Occupation, the Agency, and the Turf Club. Every Egyptian knew what was meant by "El Kenissa El Englizia," "Diwan El Guesh El Englize," "El Wekala," and "El Club El Englize," and there was no need ever to explain to the Cairo Arbagi.

To-day All Saints' has disappeared; although whenever residents like your Correspondent pass the old site they will always sigh for the time when that British shrine graced the spot where now is arising a hideous apartment building. The British Army has removed its headquarters to a ramshackle Hotel in a side street of the Ezbekia, and where seven years ago the Union Jack proudly floated in the Sharia Kasr El Nil there now flies the Egyptian emblem. Only the Residency and the Turf Club are left as the recognised centres of British influence and the rallying points for the community. And it is around the former that our memories cling.

Over the present site the Union Jack has flown for a longer period than over any other site in Cairo. It has in fact flown there since the beginning of our long association with Egypt, for, before the Turf Club, this was the residence of the British Agent until he moved to the site on the banks of the Nile where the Residency now is. Here the Maker of Modern Egypt, in the early days of his pro-Consulate, held his conferences and took his decisions, in fact, laid the foundations for the great work which will ever be associated with his name. Here all the Englishmen, who played a part in the regeneration of Egypt and in the reconquest and pacification of that still more wonderful land, the Sudan, and many of whose names are written in gold in the annals of the Great War foregathered, held their discussions, and spent some of their lighter moments. In the hearts of the many hundreds of our fellow countrymen, who from all parts of the Empire responded to the call to arms and served during the four eventful War years in the Armies based on Egypt, the Turf Club, where they received such open-handed hospitality, fills a dominant place; and whenever the survivors of those gallant legions, now scattered to the four corners of the earth, hear Egypt mentioned, the picture which their thought immediately conjures up is that of the spot where they received such warm welcome and spent so many happy hours. During the past year the Club has been the scene of memorable meetings and equally memorable speeches, and within its walls work, of which the British members of the Egyptian Civil Service can justly be proud, was carried to a successful conclusion. Finally, those of us, who passed through the troubles of 1919, realised from the attitude of the mobs the position that the Turf Club constituted in their minds, and even to-day this small plot of land in the Sharia Madabegh is regarded by the Egyptians as emblematic of Britain.

Other more imposing premises may be secured elsewhere in Cairo, but the Turf Club will never be the same place if it is moved; and it is because the site is so saturated with memories of the past, because it constitutes such a link with our old comrades across the seas, and because it is so generally regarded as a British stronghold, that one ventures to express the hope that means will be found to enable the Turf Club to get over its present difficulty and permanently maintain the address which it has had for the past thirty-four years.

A Copt's Grievances.

Some few weeks ago I mentioned a particularly bad case in the Ministry of Agriculture, where a Copt known for his good work under British auspices was hailed before a Council of Discipline, on what I characterised as trivial charges, and was found guilty and sentenced to be degraded, in circumstances which constituted a travesty of justice. He appealed to the Higher Council, which has now acquitted him of the charges then brought against him, but has given him an *inzar* (warning) in regard to another charge since formulated.

The charge in respect of which he has now received a warning arose out of other charges. It was, however, based on an "irregularity," which is no uncommon occurrence and to which the heads of administrations, recognizing that it is of a purely routine nature, usually shut their eyes. Once, however, such an irregularity is officially brought to the notice of a Council of Discipline the latter has no alternative but to deal with it, and the triviality of the offence is amply demonstrated by the fact that by contrast with other heavier penalties, which are in the competence only of a Council of Discipline, the Higher Council merely gave a warning which is entirely within the discretionary powers of an Under-Secretary. While the formulation of this new charge reveals the determination of his superiors to leave no stone unturned to get him punished, the proceedings before, and the verdict of, the Higher Council of Discipline more than justify my characterisation of this case as a striking instance of political and religious persecution.

Luxor—Assuan.

Not a single hitch marred the inauguration of the broad-gauge line between Luxor and Assuan, which will enable passengers henceforward to travel without change from Cairo to Shellal and economise at least four hours in the journey. The entire arrangements were a model of organization and the only complaint one heard was that the Railway Administration was doing its best to kill its

Khartoum, December 3.

Improvements to Khartoum.

With the end of the leave season, Khartoum, with indeed the whole Sudan, is shaking itself into activity in preparation for the coming season's work. There are indications in many directions of the making of substantial progress during the coming year in the several schemes for the improvement of Khartoum. The new bridge joining Khartoum with Omdurman and carrying the projected new electric tramway, though somewhat delayed owing to the coal strike in England and the consequent difficulty of obtaining certain necessary supplies in due time, is nevertheless advancing towards completion. No fewer than four spans (including the large swing span) out of a total of eight are finished; all the work on the foundations is done, and there is no doubt that the whole structure will be completed well within the contract time. As to the tramway itself, the iron standards to carry the overhead wires are rapidly being erected in both Khartoum and Omdurman along the various routes the service is to follow, and the inauguration of this new means of transport is eagerly looked forward to by the inhabitants of both towns.

Slatin Pasha.

The recent visit to the Sudan of Baron Sir Rudolf Slatin Pasha rouses memories of Khartoum and Omdurman far removed from the problem of electric traction in those towns. Little could Khartoum's distinguished visitor have visualised the so rapid advance of the amenities of civilisation when, as a prisoner of the Mahdi, he was running beside his captor's carriage in the dust.

The spontaneous welcome accorded to Sir Rudolf by the native population both at Khartoum and at Omdurman was remarkable. Crowds greeted him at every stage: seldom has the Sudan witnessed such a demonstration of affection and respect.

The Govenor-General.

The arrival of Sir John Maffey, Governor-General of the Sudan, is looked forward to on all sides with pleasure; and especially so in commercial circles, where it is confidently felt that His Excellency's practical business experience, added to his brilliant record as an administrator, is an augury of the best kind for the future welfare and progress of the Sudan.

IRAQ.

Baghdad, November 24.

The New Cabinet.

Jaafar Pasha al Askari, Iraq's Diplomatic Agent in London, who was sent for by King Faisal to form a Government, reached Baghdad on November 18. His journey by air from Cairo was interrupted by a forced landing in the desert, and the very bad weather conditions made it necessary for him to travel the last stage of the journey, from Ramadi to Baghdad by road, so that his arrival was later than the anxious politicians awaiting him had expected. From Thursday to Saturday Jaafar Pasha was busy bringing to bear his well-known tact and political skill on the problem before him, and late on Saturday night it was announced that he had succeeded in forming his Coalition.

Jaafar Pasha's career has been a distinguished and interesting one. In 1920, when King Faisal's first Government was set up in Iraq, Jaafar Pasha became the Minister of Defence, and has been Prime Minister of three subsequent Cabinets. For the last two years he has been Iraq's Diplomatic Agent in London.

The strongest member of the new Cabinet is the Minister of Finance, Yasin Pasha al Hashimi, leader of the Iraq Nationalist Party, and the most prominent personality in opposition to the last Administration. Yasin Pasha is a fluent and skilful debater, and has a considerable following of the more extreme politicians of Baghdad. He has been Prime Minister, and also Minister of Communications and Works.

The new Minister of Interior is Rashid Ali Beg al Gilani, whose election to the post of President of the House, defeating the Government's candidate, was the cause of the last Cabinet's fall. In Yasin Pasha's Cabinet he was Minister of Justice, but resigned this post after a disagreement with the Premier on the subject of the Turkish Petroleum Company's concession. He then became Minister of Interior, and afterwards President of the Chamber of Deputies, again resigning in consequence of a dispute with another Minister; since then he has held no official post until his recent re-election as President.

Raouf Beg al Chadirchi is the Minister of Justice, a post for which, as a leading Baghdad lawyer and President of the Law School, he is well qualified. He was formerly Minister of Finance.

Amin Zaki Beg continues as Minister of Communications and Works, which position he held under the Progressive Cabinet. He was trained as an engineer and held a staff appointment in the Turkish Army.

Nouri Pasha Said takes up for the fourth time the portfolio of Defence. The brother-in-law of Jaafar Pasha, he is Deputy Commander in Chief of the Iraq Army, and is an efficient and experienced soldier.

The Minister of Education, Saiyid Abdul Mahdi, and the Minister of Auqaf, Amin Ali Beg al Bashayan, are newcomers to office. The former is an ardent Nationalist, the latter Independent.

Such is Jaafar Pasha's Coalition Cabinet. The Progressive Party, at a meeting held on Sunday, agreed not "to oppose the Askari Cabinet, provided it carries on the administration of the country in accordance with Progressive principles, and does its best for the welfare of the country," but added the warning that, as the Progressive Party has" no real representation in the new Cabinet, it should not be considered to be associated officially with the Cabinet's decisions." Parliament is to meet next Saturday.

General News.

Reports of damage done by the unusually heavy rain of the last fortnight are still coming in from all over the country. Between Sinjar and Mosul a car carrying a party of Christian refugees from Turkish territory was washed away in crossing a mountain stream swollen by the rain, five people being drowned. The rain spell seems at last to be broken, and Baghdad is once more enjoying the cloudless skies and cool breezes which one associates with November in Iraq.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.
Subscription £1 per annum.
Further particulars may be obtained of
74, Grosvenor Street, W.1. E. H. Keeling, Hon. Sec.

Sofia, December 10.

Bulgaria, Yugoslavia, and Greece.

The Italo-Albanian Pact, which has provoked such alarm in Belgrade, has had little repercussion in Sofia, where the matter is being discussed with neither rancour nor joy. It is, of course, recognised that this Pact may have reactions on Belgrade—which in their turn cannot fail to influence, for good or ill, Bulgarian-Yugoslav relations. One says good or ill, because it is not yet known whether Yugoslavia, which suspects Bulgaria of having some sort of alliance with Italy—a perfectly unjustifiable suspicion—will not increase animosity towards Bulgaria before taking a wider view of Bulgarian-Yugoslav relations, and particularly of the policy of Balkan solidarity, which alone can dispel the Italian danger as conceived by the Yugoslavs.

The Bulgarian Government has already sent delegates to Athens, M. Ratcho Kosseff, ex-Minister Plenipotentiary, and M. Georges Kiosseivanoff, head of the Consular Department of the Ministry of Foreign Affairs. These men have full powers to negotiate, conclude, and sign a Commercial Treaty with Greece. This would be the first of such for Bulgaria, which since the War has lived only under the provisional arrangement of the most favoured nation clause. This Commercial Treaty will have considerable influence on the development of Greco-Bulgarian relations. In its way it may mean the beginning of an inter-Balkan entente.

CYPRUS.

Nicosia, December 6.

The New Governor.

Sir Ronald Storrs arrived at Famagusta in H.M.S. Cornflower on November 30, and proceeded by rail to Nicosia, which was beflagged, in the Turkish quarters with English and Turkish flags, and in the Greek with those of England and Greece. Here he had a great reception from all classes, being welcomed by the officials and chiefs of the different communities. The Greek Archbishop, however, was not present, being indisposed. He sent a letter of welcome. His absence has been the cause of much comment and discussion in connexion with a question of precedence. In the official programme, arranged and gazetted some days before the Governor's arrival, precedence was given to the Mufti and Chief Kadi over the Greek Archbishop, or "Exarch," as he has been styled, as has always been the practice hitherto. Now that the island has become a British Colony, priority, it is argued, should be given to Greeks, who form four-fifths of the population. The Greek Press has taken the matter up, and contends that at all important functions the position should now be reversed, and that in the Legislative Council, e.g. and the Law Courts, speeches should be translated first into Greek, and not into Turkish, as heretofore.

The Legislative Council.

The Chamber, which was adjourned in August, reassembled on November 24 and following days. The Budget of Estimates for 1927 was thrown out by the combined votes of the Greek and Ottoman elected members (13 to 9). The principal reason apparently was that the "tribute" of £92,000 (reduced by an annual grant to £42,000) is still included in the Budget. The Acting Governor, Mr. Popham Lobb, reported by telegram to the Secretary of State, and adjourned the Council till the following day, and then again *sine die*, pending instructions. Hitherto, except on very rare occasions, the Turkish elected members have always voted with their British official colleagues, thus enabling the legislative machine to work, often in the face of factions and obstructive opposition. It may be that, as the Greeks hope, there will henceforth be fuller co-operation between the representatives of the two communities. Among the changes and developments that have marked late years in the island, a new spirit has been noticeable in the Ottoman section, not perhaps unconnected with the passing of an island, nominally a part of Turkey, into British hands. To this may be added the fact that the Turks have lost, by the death of Irfan Bey, their most energetic champion both in and outside the Legislative Council.

Taxation in Cyprus.

A Commission has been appointed to inquire into the present system of taxation, and its incidence, with special reference to the condition and interests of Agriculture, Commerce, and Industry; and, if the burden of taxation should be regarded as unfairly distributed, to submit recommendations. The majority of the Commission are Greeks, with two British members, Mr. G. Wilson, Chief Collector of Customs, and Mr. Millard.

The Forests.

A Committee has been appointed to inquire into the policy and methods of the Forest Department, and, if deemed necessary, to recommend any departure from present policy. The matters chiefly objected to in complaints regarding forest administration relate to the exclusion of goats from State forests, and claims to wider rights of extracting dry fuel from the forests to others than those of villages immediately bordering on such areas, who by law possess this privilege.

General News.

Sir Sydney Nettleton, Chief Justice, is proceeding shortly to take up his appointment as Chief Justice at Gibraltar. He was offered the choice of Palestine or Gibraltar. Both he and Lady Nettleton will be much missed, and their departure is regretted by all.

There have been a number of earthquake shocks in the south of the island, especially in the Limassol area, but none so far of great violence. Rain has fallen.

NEWS IN BRIEF.

Sir Rabindranath Tagore has arrived in Madras on his return from Europe.

Captain C. E. Turle, R.N., head of the new British Naval Mission, arrived in Athens on December 17.

Ferid Bey, the Turkish Ambassador to the Court of St. James's, arrived in Constantinople at the end of last week on his way to Angora.

The will of Mr. William Octavius Joseph, of Scharia Selim el Awal Zeitar, Cairo (net personalty £20,028) was recently proved at £20,578.

Major-General Sir William Liddell, of the Air Ministry, who recently arrived in Cairo with Lady Liddell, left Egypt last week for Iraq.

Lady Bernard, wife of Colonel Sir Edgar Bernard, late Financial Adviser to the Sudan Government, died on Dec. 17 at Malta after an operation.

The Toc H lamp for India was lighted in St. Paul's Cathedral, Calcutta, on December 15. There was a large congregation, including the Viceroy and the Governor of Bengal.

Lieutenant Mittelholzer, who is flying with a Swiss geologist to Central Africa, landed on December 17 on the Nile at Cairo between the Residency and the Semiramis Hotel.

Representatives of the Yugoslav Government, delegations from the various political parties, and thousands of the general public attended the final interment of M. Pashitch in his family vault.

An earthquate shock, which, as far as is known, did no damage, was felt in Constantinople on December 16. Many people are reported to have heard rumbling, and the local observatory at Kandili estimated the duration of the shock at 10 seconds.

The centenary of General Fabvier's gallant feat bringing supplies and ammunition to the Greeks besieged by the Turks in the Acropolis was celebrated in Athens on December 13. The ceremony was held at the foot of the Acropolis, and was attended by members of the Cabinet, the military mission, and the French Minister. The proceedings concluded with a march past of troops.

The Maharaja of Alwar has presented a valuable challenge cup to the Royal Dublin Society "in remembrance of his delightful visit in 1926 to Ireland and her great people." This cup is a perpetual challenge cup to be offered for competition in the champion jumping contest at the Horse Show. A silver replica to be won outright will be awarded to the winner of the challenge cup annually, together with a cash prize of £100.

It is officially announced, says *The Times* Athens Correspondent, that the celebrated marble head of Chrysauros, which was stolen three years ago from the Corfu Museum, has been recovered. The head was in a package returned from Marseilles and left in the Customs house at the Piraeus. The head, which is belived to be the onlv example of its type, was discovered by the Emperor William during his excavations at Corfu in 1911.

The Sobranye on December 17 ratified the convention for the Bulgarian Refugee Loan and the agreements annexed. The debate was opened by M. Moloff, the Minister of Finance, who expressed gratitude for the help given by the British Government and the Governor of the Bank of England in arranging the loan. M. Athanasius Buroff, the Bulgarian Minister for Foreign Affairs, in reply to a Socialist deputy, declared that at the present moment Bulgaria had no secret engagements with any foreign Power, great or small.

A measure creating a Court of Appeal at Rhodes having jurisdiction over all the Italian Colonies in the Levant has been adopted by the Italian Cabinet.

The Indian Delegation to the Round-Table Conference with representatives of the Union of South Africa to discuss the question of Asiatics in the Union reached Pretoria on December 14 from Delagoa Bay and left for Cape Town later in the day.

The first of the De Havilland "Hercules" passenger aeroplanes, fiive of which are to be used by Imperial Airways, Ltd., on the new Cairo-Karachi service, left Croydon aerodrome on December 18. It carried Air Vice-Marshal Sir W. Sefton Brancker, Director of Civil Aviation, and Mr. Gladstone, who is going to Africa to start his Khartoum-Kisumu air service in January. The "Hercules" is a three-engined machine specially designed for flying in the Tropics. Mr. Wolley Dod was the pilot.

H.M.S. Dahlia, Commander E. T. Wickham, O.B.E., which has recently taken over duty as senior officer's ship in the Red Sea Division from the Cornflower, is ordered to remain at Malta until early in January. She will then proceed to the Red Sea and relieve the Clematis, Commander C. H. Godwin, D.S.O., which is ordered to return to Malta for docking. The Clematis was last reported at Aden.

Brevet Lieutenant-Colonel Claude Innes Shepperd, D.S.O., who has taken up the appointment of Commandant of the 3rd Battalion, 12th Frontier Force Regiment, obtains his battalion at the age of 42. From 1914 Colonel Shepperd had eight years' special employment, embracing duty with the Imperial Service troops in Egypt and at the Zeitoun School of Instruction, for which service he received the Order of the Nile. He was also with his regiment in Mesopotamia in the final phases and latterly has been with the battalion of which he has become Commandant.

THE GORDON MEMORIAL COLLEGE.

The "Reports and Accounts" (to December 31, 1925) of the Gordon Memorial College, Khartoum, is notable in that it contains the last annual report to be made on the College by Mr. J. W. Crowfoot, who resigned from an office which he has held since 1914. The connexion with the Sudan of the former Principal of the College actually began in 1903, and his informative statement has, therefore, a personal, as well as the usual, wider interest.

THE ITALO-ALBANIAN TREATY.

The Albanian Legation in London received on December 15 the following telegram from Tirana regarding the Pact of Friendship between Albania and Italy:—

"The Pact of Friendship which has been concluded between Albania and Italy cannot, and ought not to be, regarded as other than a diplomatic act which brings confirmation in regard to the independence of the sovereignty of Albania and her territorial integrity. Far from favouring any interference on the part of Italy in external and internal affairs of Albania, and far from substituting the neighbouring Great Power, for the rôle of international guarantee which the high institution of Geneva assures to all its members, this Treaty, which is also a Treaty of arbitration, is inspired solely by the principles of the Covenant of the League of Nations—where it will be deposited—and thus it does but increase the authority of the League of Nations in the international domain. This Pact is not followed by any secret clause or annexe which would be in flagrant contradiction to the principles upon which it is founded. In short, the Treaty of friendship concluded between Albania and Italy is a Treaty of Peace and is not directed against any State. The anxious commentaries of part of the foreign Press are, therefore, based upon nothing but conjecture."

PALESTINE, RUSSIA, AND THE JEWS.

The *New Judæa*, a propagandist organ of the Zionist Organisation, has seen fit, in its issue of December 10, to criticise severely certain comments made in our leading article of December 2, entitled "Doubt in Palestine," on the scheme of Jewish colonisation in Russia, which, as is well known, has lately been receiving fresh prominence in the Press. It suggests that we erred in making mention of this scheme as an "alternative to Zionism," of the sending of "English money" to Russia for the furtherance of this Soviet scheme, of the enthusiasm for this Soviet scheme, and particularly of the coincidence of fresh publicity for this Soviet scheme with the economic embarrassment of Zionists in Palestine. Incidentally it makes another further point, as if to dispel even the possibility of this Soviet scheme's becoming a "rival" to the Palestine plan: that only 100,000 Jews can be settled in Russia.

In reply to *New Judæa* it is, perhaps, sufficient to point out that we were not speaking quite without the book when we discussed the possible repercussions on Jewry of the temporary embarrassment of Zionists in Palestine. First, we may be permitted to quote from a Moscow message (published on November 22) on the All Russian Congress. This message contained the following passage:—

"Kalinin urged that Russian Jewish farmers should establish *an independent State in Southern Russia to compete with Palestine as a Jewish National Home.* He promised the Congress that the Jewish State will become a reality as soon as the Jews take up all the land which the Soviet Government has granted them in the Northern Crimea, the Ukraine, White Russia, and the vicinity of the Sea of Azov. Kalinin declared that the Jewish chances of forming an autonomous Republic depended chiefly on the support given to the project by American Jews, who had already supplied money for farm equipment. It is announced that there is room for 100,000 *Jews in the Crimea*, 50,000 *in the Ukraine, and* 200,000 *in White Russia and the Sea of Azov.*"

Our readers will perhaps be the less inclined to condemn us for having had the audacity to describe this Soviet plan for competing with Palestine as a rival Jewish scheme when they have read this telegram. Between the figures given by the two sets of propagandists relative to the capacity of Russia to settle Jews we have no means of determining. But we do resent the imputation of the *New Judæa* that we had supposed the Soviet scheme to have been launched only during the present economic crisis in Palestine. (What we suggested was that the publicity which the Soviet scheme is now receiving is not so much a coincidence as the direct result of the Palestine's Jews' temporary plight. It seems to us naive to suppose that the very clever Soviet authorities would not take advantage of the depression in Palestine to boost their own particular scheme for the Jews.) We should, indeed, have been ignorant of the "trend of events" had we said so. At the beginning of the year, for instance, it was reported that the Jews in Palestine were already disquieted by the possibility of the establishment of a rival new Jerusalem in the Crimea. And the name of Mr. Marshall, President of the American Jewish Society, was at that time connected prominently with the furtherance of the Soviet scheme. Moreover, as making the same point of the present publicity that the Soviet plan is getting, the *New Judæa* itself remarks:—"M. Kalinin's utterances reveal a definite change on the part of the Soviet Government towards Jewish nationalism."

For the rest, if our readers will bear with us, let us quote the *Jewish Guardian* of November 26, which, writing upon "Palestine and Russia," said:—

"Another difficulty is caused by the rival scheme for a Jewish settlement in the Crimea. Accounts and opinions differ as to the precise degree of competition between Zionism and Crimeanism. We note that Moscow last week was the headquarters of a Conference on Jewish colonisation, at which divergent views were expressed. The Chairman, M. Larin, said that 'if the Zionist World Organisation damaged the Jewish Colonisation Work in Russia, it would commit a shameful and treacherous act towards the Jewish impoverished masses' (our authority is the Jewish Telegraphic Agency), but he, for his part, 'would not combat Zionism within the Jewish Land Settlement Organisations'—a somewhat neutral, or self-cancelling, pronouncement. Dr. Paul Nathan, of Berlin, who was in Moscow, said that there could be no question of competition, because Palestine was a small and a poor country, with an Arab rather than a Jewish future; and Dr. Jochelman, who was also in Moscow, said that English money sent to Russia for the furtherance of the colonisation scheme, had been collected in pennies in the East End of London, which seems to indicate that London Jews are more enthuiastic about Crimeanism than Zionism. We cannot judge between these views, though, on general grounds, we see much that is attractive in the project of settling Russian Jews, and foreign immigrants, if the extension were allowed, in a part of their own country where they will be free to practise their own religion."

We see, therefore, no reason for conforming with the *New Judæa's* quaintly worded remark:—"We fear that our contemporary has misread the situation and will correct some of its misstatements."

THE ANGLO-EGYPTIAN ASSOCIATION.

The Executive Committee of the Anglo-Egyptian Association (of British past and present Government officials), the offices of which are at 3, Grosvenor Gardens, S.W.1, are making a fresh effort to attract members. It is calculated that out of some 1,000 officials who have left the Egyptian Government Service since 1922 only about 300 have joined the Association, the rest of the 450 actual members being made up of officials who left before that date and non-official members. In view of these figures it is felt that endeavours must be made to bring the objects and activities of the Association more emphatically to the notice of ex-officials, and that if this is done many will realize the desirability both for themselves and for their fellow ex-officials of joining the Association without delay.

The objects of the Association as indicated in its Statutes are:—

1. To keep in touch those who have settled in the British Isles or abroad and those who are still in Egypt.
2. To safeguard the interests of its members, should concerted action for this purpose become necessary either in Cairo or in London.
3. To obtain employment for its members.
4. To undertake such other duties for the benefit of its members as the Council may approve.

Of these objects there is no doubt that the second would, if the occasion arose, be by far the most important. It is naturally to be hoped that no need for the Association's assistance in this direction will arise. But in such an eventuality it is impossible to over-rate the benefits for members of having such an organisation in being, since an organized body is obviously more able to make representations in the proper quarters, if the interests of its members are threatened, than individual members acting each for himself alone could possibly be.

In the meantime the Association endeavours to carry out its other objects by:—

a. Issuing periodically a list of members with their addresses, so that friends can get in touch with one another.

b. Organizing an annual tea and dinner early in July on the day of the Annual General Meeting; on each occasion in the last three years there have been anything up to 200 Anglo-Egyptians present. This year the Association assisted the Anglo-Egyptian Golfing Society to make arrangement for a Golf Meeting. It is hoped that this will be made an annual event.

c. Issuing periodically a Bulletin, which it is hoped to

Digitized by Google

make a quarterly production and more complete than hitherto, giving news of the activities of the Association and any personal announcements which may be of use or interest to members. Annexed to the Bulletin is a short Directory of the names and professional or business occupations of any members who request the insertion of such notices; no charge is made.

d. Acting as an Employment Bureau for those of its members desiring its services in that direction, registering wants and notifying vacancies.

e. Assisting members who are in difficulties over the payment of their pensions. Valuable help has already been rendered to many members in this matter.

f. Making arrangements with the Overseas League whereby members of the Association can join the League without entrance fee.

ITALY AND THE RED SEA.

On December 16 Commendatore Luigi Villari addressed the Central Asian Society at the Royal United Service Institution on "The Italian Colonies on the Red Sea and their connexion with Central Asia." Sir Michael O'Dwyer, who was in the Chair, described the modern Italians as representatives of Imperial Rome, and showed how, although in the Middle Ages cities like Venice and Genoa had empires of their own, after the discovery of the Cape Route it was those countries with sea-boards on the Atlantic which were able to stake out colonial claims in the East. When the Italians awoke to unity they found most of the chances gone. Sir Michael further suggested that in the allocation of territory after the Great War Italy had fared hardly.

The lecturer, after describing the immense industry and means of Italian emigrants all over the world, briefly sketched the origins of Italian aspirations towards colonial expansion, as the result of pressure of population. Public opinion in Italy demanded that Italy, like other great Powers, should possess colonial territories of her own where her sons could settle under the Italian flag, and work not only for their own profit but to the benefit of Italy herself. In the 'seventies the first Italian settlements were effected on the Red Sea coast, and in 1890 they were united in one colony under the name of Eritrea. It was hoped that this territory would prove suitable for white colonisation, especially in the uplands of the interior; but from the first it was disturbed by wars with Abyssinia, ending with the Italian defeat at Adowa, which domestic opinion in Italy did not think fit immediately to avenge. In fact, the exaggerated optimism of the early days gave way to equally exaggerated pessimism; the colony came to be regarded as a useless expense by those whose one thought was for home politics and domestic reform. Even the efforts of Crispi to direct attention to Italian activities overseas were unavailing. During the subsequent years, however, Italian officers and officials carried out useful spade work, and Eritrea developed successfully in unexpected ways. During the Libiyan war of 1911-12, the Eritrean *askari* or native levies proved excellent soldiers, as indeed they had proved themselves in the wars against Abyssinians, and they greatly distinguished themselves on many occasions. The economic progress of the colony, moreover, was remarkable, and while the idea of white colonisation was abandoned, the soil had proved suitable for the production of cotton and of various seed oils and other tropical plants. (Of these the lecturer supplied some lantern slides). The labour was native, working under white direction, and great irrigation and drainage works recently undertaken were calculated to increase the output very considerably. Large things were hoped for from the present schemes of the Duke of Abruzzi.

Apart from its own agricultural importance, Eritrea had come to be an active centre of trade with its neighbours. On one side was Abyssinia, which, although it had other outlets, found the Italian colony with its well-equipped port of Massowah very useful for the exports and imports of certain districts. On the other side was the Yaman (on the opposite shore of the Red Sea), which might be regarded as a neighbour of Eritrea. This colony colony had for some time acted as the intermediary between the Yaman and the rest of the world. The recent agreement signed by Governor Gasparini and the Imam Yahya had embodied an already existing commercial connexion—for the trade between Eritrea and the Yaman amounted last year to 60,000,000 lire.

In conclusion, Signor Villari mentioned other Italian activities in connexion with Central Asia—the journeys of Marco Polo, the travels in the Yaman of Varthema, the activities in the Middle East of seventeenth-century Italian missionaries, of Manzoni, of Capproti, of the explorations of the Duke of the Abruzzi and Dr. De Filippi in the Himalayas, schemes for Italian participation in the development of Persia and Afghanistan, and the general cultural understanding of the thought of the East and of the West.

In the subsequent discussion, Colonel Jacob, of the Yaman, spoke very highly indeed of Italian colonising activity in the Red Sea. He had been all over Eritrea and was immensely impressed with Italian efficiency. Particularly he was struck with the native troops, both Christians and Muslim—especially the latter. He was surprised to hear from the lecturer that the Italians no longer regarded Eritrea as a white man's country, for he (Col. Jacob) certainly thought the Eritrean uplands fit for whites. In conclusion, he said that the Italians as colonisers were second only to the British, and much more enterprising!

Mr. Enthoven inquired whether, if the Italians were modern representatives of Imperial Rome, which had pushed out its men as far as the Persian Gulf and even to India, they would eventually come into conflict with the British Empire. He wondered what were the ultimate aims of Fascism in Central Asia.

Sir Gilbert Clayton added his testimony to Italian efficiency in colonisation. He mentioned that when a junior official in Kassala he had thought that the work of the Italians equalled even that of the British!

In summing up, the Chairman said that the British had worked upon Roman traditions in India. These, he said, he had traced the present system of land tenure out of survey back to Rome, via Akbar, Persia, the Caliph Omar, the Byzantines, Diocletian, and Julius Caesar! The Roman colonisers' motto was *parcere subjectis, et debellare superbos*, and a much better motto it was, too, than the modern one of "self-determination." Finally, the Italians not only had commercial and cultural claims in the East, but also the spiritual factor should not be minimised.

Signor Villari reassured his audience on the question of Italo-British rivalry in the East by the story of a meeting which he had with Mustapha Kemal. The Ghazi was fearful of Western designs upon the integrity of Anatolia, and included in his fear was Italy. When asked for evidence, Mustapha Kemal stated that the Banca di Roma had opened a branch at Adana. "But your Excellency," said Signor Villari, "the Banca di Roma has opened branches also in Paris and London"

The 12th Lancers have been moved from Hounslow to Egypt, and the 2nd Bn. the Border Regiment has arrived at Malta from the Sudan.

The death occurred on December 18 at Bharatpur of General Sir James Willcocks, who was born in India in 1857. The General had seen service in the Afghan War of 1879, in all parts of India, in West and South Africa; and in the Great War he commanded the Indian Army Corps of the British Expeditionary Force.

Major-General George Robert Shakespear, Indian Army, of South View, Denville, Havant, Hants, who saw service in the Sudan and on the North-West Frontier of India, died on September 2, aged 83, leaving estate of the gross value of £1,041, with net personalty £914.

THE ONE-EYED CADI.

A Turkish Tale of Long Ago.

By HAROLD THOMPSON.

In the good old days when Sulaiman the Magnificent occupied the Ottoman Throne, when Chief Eunuchs were styled Serene Highnesses and Pashas rejoiced in the possession of nine tails, when Angora cats could conscientiously boast of one emerald and one amber-coloured optic apiece, Kior-Mehmed, the one-eyed, may Allah rest his simple soul, was Cadi of Broussa. What Kior-Mehmed lacked in the matter of optical equipment, he made up for in forensic ability.

To his inward astonishment, veiled though it was by his outward imperturbability, the Cadi one day found arraigned before him Hajji Ibrahim, the master filigree-worker, who, being a near neighbour, had always been looked upon by him as a respectable citizen and a true follower of the Prophet. The nature of the charge brought against the Hajji was reprehensible in the extreme. He was accused of having inflicted grievous bodily harm on Ayesha, his wife, during a heated disputation on domestic economy, in the course of which he had so far forgotten his manhood as to hurl a sharp instrument with which he was at work straight into the moon-face of the worthy Ayesha, thereby occasioning the loss of an almond-shaped eye.

Now, the wilful destruction of an eye or, for that matter, of any member of the human anatomy, was a heinous offence even in those -off days, and Hajji Ibrahim well knew the nature of the penalty which must follow in due course by the simple but effective operation of the *Deiyet**. He nevertheless offered no defence beyond stubbornly reiterating at successive stages of the proceedings: "Wa'llahi, Bi'llahi, oh Cadi, thou art verily unversed in the ways of my wife," which statement may have been literally true, inasmuch as in those old-fashioned days a Turk might enjoy the friendship or the acquaintance of a male neighbour for very many years without necessarily meeting or knowing his better half.

"An eye for an eye—a tooth for a tooth" . . . the dread words boomed ominously in the ears of the wretched culprit as he heard the Cadi solemnly passing sentence and charging the Agha of the Executioners to do unto the prisoner even as he, Hajji Ibrahim, had done unto the faithful Ayesha, the moon-faced, his wife.

"Oh, learned Cadi," at last pleaded the miserable Hajji, "I urge once more, in my defence, that thou art unversed in the ways of my wife. Nevertheless, as retribution must inevitably overtake me, either now or hereafter, inflict thou on me, in thy merciful compassion, such form of correction as will not for ever deprive me of my livelihood which already exacts the full services of my two eyes. But, that the *Deiyet* may run its appointed course, take thou, oh Cadi, an eye from such as can well spare one. Remove thou one, for instance, from Habibullah, the sportsman, who shoots game-fowl which stand on one leg in the marshes—never has Habibullah been known to discharge his firearm without first carefully closing one eye. Better still, take one from Hosrev, the itinerant musician, the reed-player—never has Hosrev been known to play himself into a state of ecstasy without carefully closing both eyes. The good Habibullah and Hosrev will continue to shoot game-fowl and blow the reed-pipe though they possess but three eyes between them, whereas thou knowest, oh noble Cadi, that the Community has as much use for a one-eyed filigree-maker as it has for a three-legged dromedary."

Hajji Ibrahim's impassioned pleading fell on deaf ears and he was forthwith removed to the underground dungeon, there to meditate on his offence and await the day fixed for its expiation.

Now, the Cadi's good lady, thanks to the cloistered seclusion of her everyday life and to the presence, at the going down of the sun, of her worthy helpmeet and spouse, usually expanded over the evening meal. If the repast chanced to be a succulent one, the Cadi's expansion proceeded *pari passu* with that of his wife. After a particularly successful culinary effort, the mutual expansion, figuratively speaking, attained such dimensions on this particular occasion that the honest Cadi who, as a rule, was reticent about matters judicial, indiscreetly recounted to Mrs. Cadi the incident of Hajji Ibrahim and the fair Ayesha. "May the All-Merciful be praised," interjected the worthy helpmeet. "Was ever so opportune a happening thrust under the very eye—ahem, the very eyes of man? I perceive in this predestined occurrence the finger of Fate—Kismet has obviously decreed that Hajji Ibrahim's loss shall be your gain."

The Cadi laid down his wooden spoon, replaced on the *Sinni*† the gaily coloured earthenware bowl from which he had been refreshing himself and leered quizzically at the rafters with his solitary eye. This practical aspect of the proceedings had clearly failed to suggest itself to his somewhat sluggish mind.

Husameddine, the surgeon barber, consulted the following morning, was a shrewd practitioner renowned for his unfailing resourcefulness in intricate cases. He had never heard of the transference of an eye from one person to another in the whole of his chequered career; but, with becoming professional reticence, he carefully refrained from imparting this piece of information to his prospective patient. After the customary bargaining, in which Mrs. Cadi took the leading part, the good man consented to undertake the delicate operation. At all events, reflected the shrewd Husameddine, if the Cadi Effendi gains nothing by the venture, at least I shall.

The next person to be initiated into the secret was the Agha of the Executioners. In consideration of a small gift of Aspers, this dignitary readily undertook to consign into the safe keeping of the surgeon-barber the eye of which it would be his painful duty to deprive our poor friend the Hajji Ibrahim.

The fateful day dawned on a miserable and penitent prisoner. A curtain is mercifully drawn over the proceedings up to the dramtic moment when the Agha placed in the trembling hand of the surgeon-barber the optic lately the property of the master filigree-worker for transference, according to agreement, to the learned Cadi sitting patiently on a divan in an adjoining and darkened chamber. Husameddine was nervous—Husameddine was shaky—Husameddine, in common parlance, bungled

* Lex talionis.

the catch and dropped the slithering eveball on to the floor. Before he could recover it, a majestic Angora cat —the pride of the Broussa Law Courts—which had been watching the proceedings at leisure from a dark corner, had made an end of the matter in one single bound. Resourceful in emergencies as old-time surgeon-barbers were, there was none more resourceful than Husameddine. In the twinkling of an eye, so to speak, one of that cat's optics was reposing safely in his folden hand and in another twinkle had been deftly inserted in the empty socket of the learned but unsuspecting Cadi sitting patiently in an adjoining chamber. The application of soothing unguents and clean linen bandages, the enforced darkness prescribed by the practitioner, and the patient and devoted attentions of Mrs. Cadi worked wonders. To the surgeon-barber's unutterable astonishment, the unexpected happened—the eye at last took root.

Within a fortnight Kior-Mehmed, Cadi of Broussa, could look out on the world on a footing of equality with the best of his fellow men. His left eye, it is true, appeared to be somewhat smaller than the right one and the pupil of the new optic was apt to contract into a mere perpendicular slit whenever he approached a lighted taper, but these little anomalies both he and Mrs. Cadi attributed to the fact that the operation was an entirely novel and untried one in surgical annals.

. . . . . .

The day of settlement came round, Husameddine's bill was paid in full and overflowing measure. Before taking his leave and withdrawing from the presence of his influential patron he inquired, with a professional air, whether his patient was satisfied and comfortable.

"Since you have put the question to me," replied the honest Cadi," I will be frank with you, provided I may rely upon your professional discretion. I am quite comfortable and, Mashallah, I can see tolerably well, but I am grievously puzzled and mystified. To begin with, from what my wife tells me, my new eye inclines to the emerald green in colour. Moreover, I am now beginning to perceive distinctly objects in the dark which before the operation I could only discern in the daylight. But what is most extraordinary and incomprehensible to me, if you will believe what I say, is the fact that no sooner do I observe a crack, crevice or hole in the floor-boarding or wainscot but down I must immediately go on to my bended knees and peer into the dark cavity with sustained concentration. Now, how do you account for this astonishing anomaly, friend Husameddine? What is it that can possibly urge me, at my age and with my snowy beard, to go through these undignified acrobatics?"

"That, oh Cadi Effendi," rejoined the ever-resourceful surgeon-barber, "I attribute entirely to the vagaries of the new eye and to the natural transmutation of certain of Hajji Ibrahim's optical characteristics to its present owner. You see, learned Cadi, filigree-making is not only a fine art but a highly exacting one. The craftsman who would excel in his calling must keep his eye as steadfastly riveted on his handiwork as—well, as the hunter does on the quarry, or, better still—as the cat does on the mouse."

THE WEEK AT HOME.

London, Tuesday Morning.

The Liberals' Situation.

Those who are inside the Liberal camp or camps assure me that there is "something" going on all the time, with the supposition that "something" will happen sooner or later. What that "something" is, however, I am too dull to be able to discover. Lord Grey makes a resounding speech in anti-Lloyd George sense; but this defines rather the present than the future. The income from the Lloyd George Fund is accepted by the Liberal Party (by 19 votes to 14); but this again gives little inkling on how the Party will act upon any given occasion—it is even said that the money was not accepted at the price of subservience to Mr. Lloyd George's political ideas. And finally, it is announced that Sir Herbert Samuel is returning next spring to politics in the Liberal interest, but there is no indication that he will not sit on the fence for some time before he comes down . . . . It is all very puzzling, and must be almost distracting to those who have "Liberal principles" at heart.

As matters are, there can be no possible hope for the Liberal Party. This Lloyd George Fund is like a millstone round its neck. Indeed, the *Observer* is moved to write:—"The best of all solutions would be . . . . to carry the cash-box out to sea, drown it as deep as the King of Thule's cup, and celebrate afterwards under Mr. Lloyd George's leadership the real Liberal festival of unity and deliverance." In the meantime, the followers of Lloyd George are saying to the majority of Liberals what Browning said about the Lost Leader.

In Praise of Trusts.

One may well blink upon reading a speech of a Labour man in praise of trusts, or fusions, as they are now more discreetly called; but Mr. Philip Snowden, who spoke last week on this subject to the Institute of Chartered Accountants, has been travelling fast in the last few years. He is, of course, by no means representative of the rest of the Labour Party in this connexion, but his words have come like honey to those who desire that the modern movement towards trade amalgamations shall not be handicapped by any untoward interference.

Mr. Snowden spoke like any "big business" man on the advantages to the consumer of amalgamation, through elimination of waste and economy of equipment, production and distribution. Nor is it to be doubted that a certain few in his Party will follow the lead he has given in praising the latest step in commercial enterprise. Whether, however, the Labour Party as a whole will ever become reconciled to these powerful mergers is another matter.

Morals and Publicity.

The Bill for the Regulation of Reports of Judicial Proceedings became law just before the end of the Parliamentary sitting, but it appears yet to be by no means certain whether its effect will be wholly beneficial. The conception of the law is, of course, to avoid the manifold nauseating details of divorce cases which in the last few years have so constantly bespattered our newspapers. The Press is now restricted to skeleton reports, the theory

being that the public stands to gain from the strict denial of publicity to divorce suits.

It was curious, however, to find, in the first divorce case to be reported under the new Act, that the President of the Court felt it to be so essential that the effects of a collusive bargain should be understood by the general public that he deliberately set forth the facts of the case in a manner that they might become public knowledge.

But on the whole one cannot help feeling that the Act will in the main be beneficial, if only for the reason that indirect influence for evil is incalculable, whereas the escaping from publicity of guilty parties has, more or less, a calculable effect.

The University Matches.

Although Oxford lost the Rugger match at Twickenham last week by 30 points to 5, it was not such a one-sided show as might be supposed. Until the last twenty minutes or so indeed, not even the extraordinarily clever play of the two Welsh Light Blues, Morgan and Windsor Lewis, could penetrate the stubbornness of Oxford. Once, however, that defence was penetrated, tries came with amazing (and, to the writer, delightful) swiftness. There is no question at all that Cambridge were the better side, both before and during the game.

The Soccer match, on the other hand, was a surprise, for Cambridge, who before the game were favourites, were quite definitely worse than Oxford. It was poor football, the poverty in the Cambridge forward line reaching to an incredible depth; but it was honest and whole-hearted. Not often does a centre-half get so treated by his opposing inside forwards as was Whewell, of Cambridge, in this match; it is worthy of note that the referee thought fit three times to comment with his whistle upon the kind of attention which the eager Oxford forwards paid to the Corinthian centre-half. But, here again, there was no question that Oxford deserved to win—mainly because Cambridge were so bad.

Christmas in London.

It is said that 1,000,000 people have come or are coming to London for Christmas; certainly the crowds in the gayer streets are dense. Shops and restaurants and hotels have made gigantic preparations for this week of rush. Everything is taking on a festive appearance; holly is abundant in red berries this year, and every other home seems to be having a Christmas tree. The children home from school are revelling in the artificial lights and the mechanical toys which are being sold in quantities in the West End and even in poorer districts.

Those who are fated to spend the season in town are, I think, to be pitied, for the home is still the core of Yuletide. This, however, is probably an heretical opinion, for a vast number of people seem now to prefer to mix and dance in strangers' company, the while the hotel manager bids his guests be of good cheer—and cause their bills to mount. For there is no doubt that Christmas, like so many traditional things, is. in danger of being commercialised.

The Non-Smokers.

In the last few months, as I think I have already chronicled, the railway and the tube authorities have been making considerable concessions to smokers, who are, it seems, deemed to constitute a majority of passengers. Smoking was recently permitted in waiting rooms of the L.N.E.R., and a few weeks back the non-smokers in the tubes were relegated to two small compartments. At this last indignity the Wahhabis of our capital took affront, and decided to strike back.

A Society of Non-Smokers has been formed, and has already told the Underground Railway what it thinks of their provision of carriages for non-smokers. But this Society is also considering action against smoking in telephone boxes, theatres, kinemas, omnibus tops, and so on. The truth is, however, that the modern world looks upon the principled non-smoker as something of a curiosity, and the mere male is likely to do nothing very much in this problem of the non-smoker's liberty. If the women were to rise against the authorities, it would doubtless be another matter. But for that we shall have to wait until female smoking becomes still a little more old-fashioned.

Pronunciations.

The B.B.C. Advisory Committee has issued another list of words the pronunciation of which is sometimes disputed. This Committee has gone on the principle of conforming with the usage of educated persons—not such an easy matter as it sounds. As a fact, however, it is difficult to find anything to quibble over with this last list, which will correct a good many errors. One sees, for instance, "capitalist" with the accent on the first syllable, "data" as "dayta," "deficit" as "deffisit" (this is one of the most disputed words to-day) "fetish" as "feetish," "finance" as "finnans," "patent" as "paytent," except in Letters Patent and Patent Office, which have "pattent," "patriot" with the first syllable rhyming with "hat" and so on.

Of course, these rulings will satisfy nobody who has determined his own pronunciations, and it is improbable that we have heard the last of the pronunciation "on" as the first syllable of "envelope," or of "process" with a short "o," or even of "arid" as if it had not two "r's" in pronunciation. But for the general purposes of the public, these rulings are extremely useful, simply because they are drawn up not by faddists but by catholically-minded men.

ALTER EGO.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

SYRIA AND BRITAIN.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In the report of the lecture on Syria by Major Polson Newman and Captain Gordon-Canning in your issue of December 2, I am stated to have "asked whether a certain responsibility did not lie at the door of England, to whom the people in the countries which she had conquered from the Turks had confided their destinies." This is not exactly what I meant. As the report is somewhat compressed, allow me to make clear my meaning, so that if any misunderstanding has arisen, it may be removed. The question which I put to Captain Gordon-Canning was somewhat to the following effect:—

During the War the Syrians had, after the Turks were defeated, placed their lives, properties, and honour in the hands of England relying on her traditional benevolence towards the weak peoples. The Treaty of Sèvres made Syria a French Mandate. The Mandatory Powers were understood to give political education to their mandatees and to train them for self-government. France, instead, gave Syria misery, desolation, and destitution. When France had failed to discharge faithfully her obligations towards her ward, was not England (to whom Syria had confided her destiny) morally bound to see that Syria was released from this misery and that either it was put under the direct tutelage of the League of Nations or was allowed to exercise the right of self-determination to which it was as much entitled as any other country?—I am, etc.,

G. F. MALIK.

The Mosque, 63, Melrose Road, S.W. 18, Dec. 17.

The attention of medical officers, Royal Navy, is drawn to Admiralty Fleet Orders 575/23, regarding the institution of the North-Persian Forces Memorial Medal. It is requested that intending competitors should communicate with the department of the Medical Director-General before December 31.

PERSONAL AND GENERAL

TO-DAY

December 23, 1926 (New Style).
December 10, 1926 (Old Style).
Jomada II. 17, 1345 A.H, of the Muslim Calendar.
Tebet 18, 5687 of the Jewish Calendar.

Sir Arthur du Cros has left London for Cairo.

Sir Albion Banerji has left London for a short tour in France, Switzerland, and Italy.

Sir Henry and Lady Bax-Ironside last week left Grosvenor Place for Paris for Christmas and the New Year.

Sir Stanley Fisher, accompanied by Lady Fisher, left London last week to take up his duties as Chief Justice in Ceylon.

The High Commissioner for India and Lady Chatterjee left London on December 14 for a vacation in Italy over the Christmas holidays.

M. Venizelos arrived in London on December 13 to conduct negotiations regarding the Anglo-Greek War Debt on behalf of the Greek Government.

Prince and Princess Andrew of Greece visited the King and Queen at Buckingham Palace on December 15, and remained to luncheon.

Colonel the Right Hon. G. R. Lane-Fox, M.P., left England on December 16 for India to join the Hon. Mrs. Lane-Fox, who sailed for Bombay on December 2.

Field Marshal Sir Claud Jacob had an audience of the King at Buckingham Palace on December 17, when His Majesty handed to him his Field-Marshal's Baton.

Sir Percy Loraine, the new British Minister to Greece, paid his first visit to the Greek Minister for Foreign Affairs, M. Michalakopoulos, in Athens on December 17.

The King has been pleased to give directions for the appointment of Sir Sydney Charles King Farlow Nettleton, Kt., Chief Justice of Cyprus, to be Chief Justice of Gibraltar.

Abdol-Ali Khan Sadri, the newly appointed Persian Minister in London, arrived at the Legation to take up his duties on December 16. He has served as Persian Minister in Washington, Madrid, and Berlin.

The Foreign Service Students' Committee of Cambridge University has appointed Abu'l-'Alá Afifi lecturer in Arabic, and 'Abdu'l-Qádir Záfir Efendi lecturer in Turkish, until December 31, 1927.

To celebrate the birthday of King Alexander of the Serbs, Croats and Slovenes, a service was held in London at the Russian (St. Philip's) Church, 188, Buckingham Palace Road, on December 17.

The marriage between Captain Kenneth Ledward, R.G.A., F.R.G.S., of 29 Bedford Square, and Alexandrina, elder daughter of Mr. and Mrs. Walter Graham of 35, Belvidere Street, Aberdeen, will take place at Aberdeen on February 14 next.

The War Office announces the appointment of Colonel B. W. Y. Danford, D.S.O., to be Chief Engineer, Egypt, in succession to Colonel G. R. Pridham, D.S.O., O.B.E., to be President, Royal Engineer Board (May, 1927).

Among the passengers who left London on December 17 by the P. and O. special train to join the ss. Kaisar-i-Hind at Marseilles were Sir Gordon and Lady Cunard, Sir W. and Lady Wheeler, and Brig.-Gen. the Hon. Arthur and Mrs. Asquith, for Port Said; and Sir Norman Walker, for Bombay.

The following appointments in the Royal Air Force are notified:—

GENERAL DUTIES BRANCH.

Wing Commander R. M. Hill, M.C., A.F.C., to headquarters, Egypt for Technical Staff Duties (Nov. 30).

Squadron Leader.—T. Q. Studd, D.F.C., to No. 4 Flying Training School, Egypt (Nov. 29).

Flight Lieutenant.—P. Murgatroyd, to Heliopolis Details, Egypt (Nov. 29).

Flying Officer.—R. A. A. Cole, to Aden Flight (Nov. 24).

The International Aeronautic Federation has awarded its annual gold medal to Sir Alan Cobham for his London-Australia flight.

The Postmaster-General gives notice that the correct rate of postage on letters for Transjordan is 2½d. for the first ounce and 1½d. for each succeeding ounce. Many letters for that country are at present being posted insufficiently prepaid.

The British High Commissioner for Egypt and Lady Lloyd went to Alexandria on December 19 to embark in H.M. Cruiser Concord for Port Said in order to attend the inauguration of Port Fuad (on the opposite side of the Suez Canal to Port Said) by the King of Egypt on December 21.

An officer has been specially appointed to investigate the difficulties in carrying out compulsory education in the United Provinces, India. Only 25 out of 80 municipalities have taken advantage of the Act, and in some of these little headway has been made owing to the unwillingness of the municipal commissioners to devote time to problems of attendance.

A suit which had been pending for two years has now been taken before the Allahabad local court. Pandit Satyanarain Malaviya is suing Pandit Ramakant Malaviya and 11 others of the Malaviya family on a charge that they had excommunicated him for dining with an alleged outcast. A suit which had been preferred in the Criminal Court had already failed. The Judge gave the plaintiff three days in which to move in the High Court for the transfer of the case to the other Court.

Book Reviews

ARABIC LITERATURE.

"ARABIC LITERATURE." By H. A. R. Gibb. (Oxford University Press. 2s. 6d. net.)

This latest addition to the extremely useful series known as "The World's Manuals" is an admirable introduction to the study of Arabic literature. As Mr. Gibb points out, few people know even of the existence of any Arabic literature other than two well-known works. Yet how considerable the literature that is the monument, not merely of a people, but of a civilisation, must be!

It is impossible to understand the history of Islam without comprehending some at least of this vast production of works in the Arabic language: the one, indeed, is in unusual degree complementary to the other, for Arabic literature very faithfully mirrors the successive stages of Muslim society's prosperity. Thus the arts flourished now in Asia, now in Africa, according to the locale of the mightiest Muslim Power.

After sketching the Heroic Age (A.D. 500-622) and the Age of Expansion (A.D. 622-750), Mr. Gibb shows how the Muslims outgrew the prejudice against putting anything on paper except the Quran. The innate love of poetry in the Arab was bound to reassert itself, so that, with the Muslim now in Iraq, Persia, North-West Africa, and Spain, we come to the Golden Age (750-1055). The Ummayads had built the human structure in which it was possible for the arts to flourish, but it was the Abbasids of Baghdad who really stimulated the splendid growth of Arabic literature. Under Haroun ar-Rashid and al-Mamoun there were remarkable works published. One need mention, as illustrative of this period, but the poets Abn Nuwas and Abul Atahiya.

In the century following these men, an orthodox reaction rather damped things down, but alike in Iraq under the Buwayhids, Eastern Persia (whence arose al-Hamadhani [969-1008] and ath-Thaalibi [961-1038], who incidentally, wrote the history from which Firdausi's famous "Shahnama" is derived), Egypt and North-West Africa, and Spain, books were being produced that had a lasting effect upon the world. This was the period, be it remembered, of our own "Dark Ages." Think of Ibn Sina (980-1037), the philosopher and scientist who is known to the West as "Avicenna," of the love-poet Ibn Zaydun, and of the polemical student of comparative religion, Ibn Hazm.

About this time the Saljuk Turks appeared in the East: in 1055 they entered Baghdad. From this time Iraq and Persia fell off, both in the quantity and in the quality of their literature: Mr. Gibb calls it the Silver Age (1055-1258). True, men like al-Ghazali, the Sufi, al-Hariri, ash-Shahristani, and Yaqut, introduced notable works on religion or history; but the heart of things had moved to Egypt and Syria. Here arose the mystic poet Omar ibn al-Farid (1181-1235), who is perhaps one of the most highly esteemed Arabic poets; at this time, too, came the historian, ibn al-Athir, and ibn Khallikan. In Spain, while the Turks were sterilising the East, arose such men as Ibn Quzman, a Muslim troubadour, and Ibn Rushd (1126-98), who, as "Averroes," is known to the West for his revival of Aristotle, but ranked by the Muslims for his attack on Ghazali's work.

The story of the production of the Age of the Mamluks (1258-1800) is shortly told. For Egypt alone remained of all those splendid bequests of the Arabs to hold high the torch of Arabic learning. As geographical reasons might have prompted, there was a decline henceforth in Arabic poetry, and a concentration upon matters of fact—history, geography, and so on. But where the prominent individual poets were few, the people itself came more and more to like poetry. So arose the stories of Antar and the romances on the Sultan Baybars. In North-West Africa, mainly in towns like Tunis, Fez, Tlemsen and the coastal places, the Muslim civilisation still showed its worth. To recall only Ibn Khaldun (1322-1406), and al-Maqqari (1691-1632) is to be reminded that Islam had its scholars even at the time of the Renaissance and Reformation in Western Europe.

Now, again, in the twentieth century, the centre of the Arabic literary movement is in Egypt, where so many Syrian *literati* have assembled. At present these Syrians appear to be concentrating on journalism, but when the political obsession has disappeared, it may be—who knows?—that countries such as Persia, Iraq, and Syria will give out literature worthy of their past.

It cannot be pretended that this little book of Mr. Gibb is exciting or even easy reading. It is designed for the serious student, and is therefore a mass of dates and facts. It is, however, a very clear mass, for the author his disentangled most cleverly the more prominent men and books, and he has preserved a notable sense of proportion—a virtue less common in Arabists than might be supposed. The gratitude of humbler students is certainly due to the author and to the Oxford University Press.

FUERUNT VEL FUERE.

"EAST AND WEST OF THE HELLESPONT." By Z. Duckett Ferriman (London: Jonathan Cape.)

Quite apart from their incidental pictorial value, of which we shall speak presently, these little travel sketches by Mr. Ferriman are delightful reading. His curiosity to see things led him to make good use of his opportunities, so that he is able to tell us of wanderings in various parts of Asia Minor, Palestine, Albania, and other places, including a difficult and perilous journey to Petra. He is an excellent observer, and behind his eyes he kept an intimate knowledge of the classics and the Middle Ages which must have greatly added to his own enjoyment—as it does to that of the reader. He writes easily and well, and has an enviable power of description in simple language.

The sub-title of the book is "Memories of Fifty Years," and it is clear that all his wandering took place before the War. So his accounts of the Holy Places under Turkish rule have a value all their own. They already read as if they dealt with affairs of a century ago. Still more is this so with the sketches of Asia Minor, where the Greeks were still the live element in the population, living far more peaceably with their Turkish fellow-subjects than it now suits propagandists to confess, and often speaking Turkish as their home language. In reading the little intimate sketches of these people which our author delights in, we wonder sadly what has now happened to them and to their descendants flung out of their homes and struggling to make good under totally alien conditions. And we wonder what their century-old home is to do without them.

A RULER OF INDIA.

"HARSHA." By R. Mookerji. (Oxford and London: H. Milford. 6s. net.)

In this addition to the well-known series named "Rulers of India" Professor Mookerji sets out to tell what is known of Harsha, an Emperor who ruled a large part of Northern India during the first half of the seventh century. He has made the most of the rather scanty information which has survived, he has kept his imagination carefully under control of ascertained facts, and it may fairly be said that he has given us a picture of the man and the time which may be shadowy and incomplete, but which is in the main correct, and will stand until new sources come to light. If a reader should close the book with a feeling of ignorance rather than of knowledge, he must put the blame on the authorities and not on the compiler, who has made a quite fair tale of bricks with a very inadequate supply of straw.

FRENCH SYRIA AND OURSELVES.

It is, we suppose, the fate of the well-disposed critic to be misunderstood; the criticism, rather than the disposition, of the dispassionate observer is remembered by the observed, and resentment rather than appreciation seems to be harboured by the objects of examination. Now it seems that certain remarks of ours concerning Syria and the French mandate therein have been unfavourably received in certain quarters in Beyrout, and although our English readers will not need to be reminded of the fact that the dogma has been unswervingly held by us of the desirability, the necessity, the duty of Anglo-French co-operation in the Middle East, we hope that they will pardon us, for the sake of some of our French readers, if we defend ourselves from the charge of, in effect, abetting France's enemies in Syria. As a sample of the criticism to which we have been subjected, we take the issue of November 7-8 of *L'Orient*, a Beyrout paper, which contained an article upon "Syria and the British 'Colonials.'"

The writer of this article, Capitaine Georges Ducrocq, maintains that each time Syria has a new High Commissioner the French mandate is the object of an offensive, and suggests that THE NEAR EAST AND INDIA is an agent of such offensives. This charge, were it not conceived and accepted seriously, would be hardly worth setting down. What THE NEAR EAST AND INDIA has criticised, and may continue to criticise, is French policy in Syria, not the agents of that policy. If *L'Orient* imagines that we have either a personal animus against all French High Commissioners or such an animus against French mandatory rule as to override predilection for or against such High Commissioners, we would simply ask it to explain our respective comments upon the régimes of General Weygand and of General Sarrail. It is a challenge that cannot be accepted.

So far as we can see at present, however, French policy is not yet on the right lines. In Syria there must be, as there was in Iraq, a unified administrative system, and if M. Ponsot perpetuates the existing division of Syria into artificial States he is, as we believe, destined to fail.

But to return to *L'Orient's* specific charges. First, it takes up the point that France had not made the necessary effort to suppress the revolt in Syria. We should have thought it obvious that this criticism of France referred to the condition of her domestic policy, which gave to the French in Syria neither continuity of direction nor adequate military means. But Capitaine Georges Ducrocq prefers to ascribe the prolongation of the revolt in Syria to propaganda outside the borders of Syria. We are unaware that we have ever defended the activities of Francophobe Arabs either in Cairo or Palestine or Transjordan, being, indeed, conscious of the ill-effects which such propaganda has among those fighting the French. But wholeheartedly to describe the prolongation of the Syrian revolt to the nefarious Arabs living outside Syria seems to us at least unconvincing. No amount of external propaganda could save a foe, however desperate and well-prepared, from the might of France in adequate earnest.

Next, the French officer maintains that all parallels drawn by British observers between French rule in mandated Syria and French rule in French colonies are false. The truth is, he avers, that the French in Syria have respected the letter and the spirit of the Mandate better than anyone. In support of this, he points to Palestine, which, as he says, is being ruled like a Crown Colony. He omits to mention, however, that the reason why the Jews are being protected and encouraged in Palestine and why the Arabs in that country feel themselves at present unable to exercise the privileges which could not and would not otherwise be denied to them (and, for that matter, the reason why the French themselves are now in Syria), are one and the same: they are the result of pledges made during the War. It is not for us to lament those pledges now, but rather to see how far they can be respectively honoured. To point out that the Palestinian Arabs are denied self-government, solely owing to the Zionist preoccupation, is, moreover, only to be reminded that even such denial has not provoked a rising in Palestine against the British. There would seem, therefore, to be something wrong in this theoretically correct debating argument.

Thirdly, Capitaine Ducrocq, while confirming M. de Jouvenel's pessimism towards Syria, defends the former High Commissioner for his outburst before the Permanent Mandates Commission against the Syrian "petitioners," the Amir Loutfallah, Shakib Arslan, Ihsan Bey Jabri, and so on. Here we are very nearly on all fours with the gallant Capitaine. How narrowly M. de Jouvenel missed success cannot yet be told; if only, in his proposals for an amnesty, he had named the leaders who could not be pardoned instead of describing them categorically!

Fourthly, *L'Orient* suggests that it is India rather than in Syria where the division, religious and feudal, of the people is perpetuated. We need not trouble to rebut the charge that Great Britain foments communal disturbances in India, but we notice that Capitaine Ducrocq does not reply to the criticism that the French policy in Syria of *divide et impera* is radically a false one. We insist on this particular point because we believe it, together with the currency problem in Syria, to be at the root of all France's troubles in the East. It may interest French observers to know that there was once a proposal to divide Iraq up into three States. That proposal, fortunately, was resisted by the British officials on the spot.

Fifthly, Capitaine Ducrocq will have none of the suggestion (cordially entertained, we seem to remember, by M. de Jouvenel) that the Syrians should be allowed to sign with France a Treaty similar to the Anglo-Iraq Treaty. He says that there exists in Iraq but a Protectorate in disguise, and that when France raises a people of independence, it will not offer it a caricature. All we can remark upon this is to hope that the French will not patent their wonderful Treaty, but will allow humbler nations to copy their improved model.

Finally, this article protests against British observance of or meddling with Syrian affairs, and suggests that if everybody minds his own business it will be better all round!

Again, and in conclusion, we assert that we have no anti-French or busybodying notions: on the contrary, one of our most earnest hopes is that the French will soon succeed, because we believe that tranquillity in Syria is the first step to the stabilising of the Middle East, which, even if Great Britain had no responsibility for it, must always be a matter of world importance. Anglo-French co-operaton in the Middle East is essential, if either Great Britain, or Farnce, or Arabia itself is to have peace and prosperity: and that is the opinion of every patriotic Englishman who knows the Middle East, as we hope it is opinion of every similarly patriotic Frenchman. We trust, therefore, that any criticisms that we may possibly feel constrained to make upon French administration in Svria will in the future not be misinterpreted but will be entertained from the standpoint which we have just laid down.

David Walker, senior Assistant Editor of the *Times of India*, died on December 13, at the house of his brother-in-law at Castle Ashby, Northants, in his 35th year.

Mr. George Turner Walch, M.I.C.E, formerly Chief Engineer for Irrigation to the Government of Madras, who died suddenly at 7, King Street, St. James's,, on December 11, at the age of 88. Since his retirement he had spent the winter months every year in travelling all over the world, the only country he had never visited being Persia.

The death was reported from Abyssinia on December 11 of the Fitaurari Apte Giorgis, the Abyssinian Minister for War. He had distinguished himself in the wars of the late Emperor Menelik, and took the side of the Empress Zauditu (Judith) in the civil war with Lij Yasu. After the establishment of the regency government he acted as Minister for War, a position regarded as only second in importance to that of the Regent.

CURRENT TOPICS.

The Younger Universities.

While active politicians have been engaged in a general election, several of the younger Universities have been holding their annual convocations, undisturbed to all appearance by the excitements of the hustings or the polling-booths. The coincidence was doubtless undesigned, but it is not without significance to observers whose memory reaches back to the brief period of active non-co-operation, when universities were the object of vigorous attack, and, in one case at least, an attempt at capture by force was frustrated only with considerable difficulty. India has made some progress in the interval, we no longer read of efforts to stampede the younger students in the mass, and men of recognised academic position have been free to put before the Universities plain statements of their actual position, and of the ideals which they hope to realise. Not less significant, perhaps, is the fact that the men have not had it all their own way, for the addresses before us include a striking pronouncement by the Begum of Bhopal, who, now that she has released herself from the daily worries of administration, may be expected to play an important part in the intellectual life of the country. Her plea to Aligarh University, of which she is Chancellor, for frugality and simplicity of life is particularly timely, for there is at the moment a real danger that higher education may become a monopoly of the rich, not because fees are high, for they are not, but because young men are apt to be extravagant, and the standard of living in some colleges has been rising so rapidly that poor students are finding their social position one of continual discomfort. The Chancellor has, then, rendered a real service to the cause by insisting that the first lesson a student should receive is the lesson that plain living ought to go with high thinking.

Ideals and Realities.

Taking the various addresses together, it may fairly be said that the younger Universities realise the need for justifying their existence in the face of the large volume of critical opinion, which holds that the movement towards extension has been altogether overdone. Their position is thus healthier than that of some of the older foundations, which are apt to regard themselves as existing by divine right, and to treat criticism as impiety. They understand also that their existence can be justified only by the strenuous pursuit of high ideals, and certainly the ideals expressed in these addresses are worthy, insisting as they do on the training of character coupled with the diffusion and the extension of knowledge. The critics, of course, allege that this is lip-service only, and that in practice these high ideals will be submerged in the flood of cheap degrees, produced by the attempt to compete with the mass-production carried on in Calcutta and elsewhere. The danger is real enough, but we think the criticism is premature, because the new Universities are still in embryo. The most hopeful sign perhaps is the progress already made towards realising that each of them cannot hope to cover the whole field of knowledge, and that, in the higher studies at least, some amount of specialisation is necessary, so that, as is the case in England, the local University should make special efforts to meet local needs. To look only at the classical languages, there is not at present room for a dozen or so centres of study of Sanskrit, Arabic, and Persian; but there is no reason why Benares should not become the recognised centre for Sanskrit, Lucknow for Persian, and Aligarh for Arabic culture. Having regard to the limited resources of these young foundations, it is only on these lines that they can hope to make good.

Knowledge and Conduct.

We have described the ideals of these new Universities as worthy, but a correspondence now going on in *The Times* warns us that this position is not unquestioned, and that, whatever may be the case in England, the diffusion of knowledge in Asia is not universally approved. Lord Inchcape set the ball rolling with some characteristic comments on the effect of missionary-work in China, the Bishop of Exeter pleaded that Western education in China and elsewhere should avoid subverting existing ethical systems, and Sir Theodore Morison, who is equally at home in Aligarh and Newcastle, brought the discussion definitely to India. The essential question is whether it is possible to combine the old Asiatic idea of authority with the modern idea of historical truth, and surely to state that question is to answer it. As Sir Theodore Morison tells us, Lord Morley, who in Indian questions had a definite leaning towards the idea of authority, found that, in order to exclude "subversive" matter from the Universities, it would be necessary to strike out from their reading lists half the best books in English. Would it be fair, or right, to teach political philosophy, for instance, solely on the lines of Hobbes, ignoring Locke and Mill: and, if it were fair, or right, would it have any practical result beyond exciting in the keenest students an appetite for the forbidden fruit? As Sir Theodore shows, it is not the teachers who belittle the old beliefs, but the ardent young converts to Western teaching, and in our view the remedy is to be sought not in narrowing the field, but in widening it. If things are not satisfactory, which is true, the fault lies largely in the tendency which certainly prevailed in India in the years during which the present generation of public men were at college, to overemphasise one side of large and complex subjects. In political studies Mill was everything, Hobbes was ignored, and it is quite possible that, if the subject had been presented as a whole, Indian opinion might have swayed

Digitized by Google

towards the older philosopher, who has so much in harmony with Hindu political writings and with Muslim political practice. At the present day, however, such speculations are unimportant. The doctrine of liberty has reached India, and is not likely to be ejected. If Mill is to be dethroned, the line of attack must be to show that he did not present the whole truth, and to help Indians to realise the aspects which he ignored. But to do that will not satisfy those critics who desire to preserve the idea of authority. The real mischief is that in India Mill has been placed on a throne where, we imagine, he would have been very uncomfortable, and the remedy, as we see it, is to restore him to his proper place on a professor's stool.

The Calcutta Improvement Trust.

In his interesting paper read before the Indian section of the Royal Society of Arts on December 10, Mr. Bompas gave a sketch of the work of the Calcutta Improvement Trust, and explained the peculiar difficulties which it has had to face since it came into existence in January, 1912. An enormous amount of work remains to be done, but the Trust's record is one of continuous and very gratifying progress. The germ of the Trust seems to have been laid down thirty years ago, but there was then a difficulty about finding the necessary money: and, as the lecturer remarked, "Calcutta, while consenting to be improved, desired that anyone but itself should pay the piper." That this very natural attitude still persists is shown by recent history regarding the Howrah bridge and the Dum Dum aerodrome. Another fact that is still in evidence is indicated by the lecturer's statement that, when the Trust came into being, and the money for it had been found, "there was the Trust, there was Calcutta, there were very considerable revenues. There was no programme, nor indication of one." And yet another, probably inseparable from such occasions in India, is quoted in support of the contention that it was undesirable that individual Trustees should come forward with bright ideas and get them adopted by the Trust. "At one of its early meetings an influential member produced a map showing what should be done; he said that communication east and west and north and south was required, also more open spaces, but at the same time excessive demolition must be avoided. He, therefore, showed on his map one E. and W. road intersected by one N. and S. road: at the junction was a large square. This plan gave, he thought, what was required, and all that was required. Inspection showed that by a fortunate coincidence the intersection of the two roads was opposite the gentleman's own house, which would overlook the proposed square."

Mr. Bompas paid a special tribute to the work of the Chairman of the Calcutta Corporation, Mr. Payne, who "by a fortunate accident somewhat unusual in Indian official life" held that post for the first ten years of the Trust's existence. Not only was the Trust fortunate in the length of Mr. Payne's tenure, but also in his being conspicuously the right man to hold it: for, though the representatives of the Corporation in the Legislative Assembly had strenuously opposed the creation of the Trust, when it came to actual work, the Corporation, under his wise and friendly guidance accepted its proposals without demur and, instead of jealous opposition, there was nothing but helpful criticism of the proceedings of the body to whose independent existence the Corporation had at first so strongly objected. Another special tribute to Calcutta and its inhabitants, which will certainly give pleasure to all Englishmen in India and not only to "Ditchers," is contained in the lecturer's closing sentence; in which, after mentioning the work achieved by the Trust, at the necessary cost of much inconvenience and even hardship to individuals displaced in the course of carrying out improvements in housing and in the provision of wider roads and improved "lungs," he said, "I do not believe that there is a city in the Empire where work of this character would have been received not merely so resignedly but with such cheerfulness, good sense and good temper."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 2.

St. Andrew.

The "nicht" went off as well as ever this year, although it must be admitted that the speeches read better than they sounded. It was a dour and doughty four hundred that sat down to one of Firpo's best efforts, *plus* haggis, at the Saturday Club on Tuesday, and the visitors, as they looked round, must have agreed with the cosmopolitan who, fixing each world town with an adjective for its men, gave "stocky" to Calcutta. Mr. R. B. Wilson, of Birkmyre's, was in the chair, and his speech was a model of common sense, good in matter, outspoken but temperate; both politician and official would be well advised to mark his words and ponder them, for he spoke, as the *Englishman* aptly says, not only his own mind but admirably and felicitously interpreted the collective minds of his countrymen and of the great majority of the European inhabitants of Bengal. His reference to the Spence case was typical of the rest of the speech. He quoted a former Chief Justice of Bengal who, speaking from the chair of St. Andrew's Dinner, denied that the citizens of Calcutta were apathetic on the question of the administration of justice, and added that when public opinion was stirred and thought that some injustice had been done, the spark of indignation burst into a flame which it was impossible to misunderstand and dangerous to ignore. "R. B." laid it down that it was best that the case should now be forgotten, but that equally these words of the former Chief Justice should be remembered.

The Governor Looking Back.

His Excellency the Governor was the chief guest, and he took the opportunity of his last speech to a St. Andrew's gathering to review his term of office in Bengal. His comment was that the events of the last five years have strengthened the case of the critics rather than that of the friends of the new Constitution, and there was almost a tragic note in his confession that he was a disillusioned friend of the Reforms. His sincerity was unmistakable, when he claimed to have come to India full of intentions to work them and to offer his friendship and sympathy to the politically-minded classes in their aspirations; but in deliberately chosen words he described the results of the experiment as a failure on all hands. He expressed his willingness to accept his full personal share of responsibility for the failure, but it must have been a bitter thing for him to have to say that the failure of the Scheme in Bengal has been due to the action not of its opponents but of its friends. The speech has probably been cabled and will have been read as closely as it deserves by everyone interested in the government of this country, and space prevents more than this reference to the main outlines of it. Its prevailing note was pessimism, and reflection since does not displace the impression of the moment that his pessimism is fully justified.

The Hymn of Hate.

The recent elections are sufficient in themselves to confirm the conclusions of Lord Lytton in regard to the Reforms. All parties who have contested Indian constituencies are agreed as to the meaning of the results; they are an expression of the universal antipathy to Government on the part of the politically-minded Indians who have votes and have used them. It is well to remember, however, that the numbers of these are far less than the noise they make would indicate, the percentage of the enfranchised throughout India being less than two per cent. of the population, and of this far less than one-half took the trouble to go to the polling booths. Those who went voted principally upon one issue—"Congress or Government, which?" and the supporters of Government were crushingly defeated. The political lesson which has been steadily parrotted into the ear of the voter since Mr. Montagu created him is a simple one;

Digitized by Google

its texts are "Hate the Government" and "Out with the British." Let us be under no illusion; the voters who vote have learnt it and they believe it means something, and so we have the new hymn of hate.

Insolence.

The mentality behind this is the mentality of *Forward*, the most successful organ of the extremists, which has never changed its policy of "Out with the British" and "Down with the Government." This morning its leading article is devoted to Lord Lytton's speech at St. Andrew's Dinner, and it is safe to say that never before has an organ of its status and popularity dared to print such a column of calculated insult. *Forward* has chosen, particularly during the last year, to vent its spleen against Europeans more and more in the form of personal attacks on the Governor and this article is a climax. Whether any action will now be taken to ensure that the representative of the King-Emperor is protected from this type of thing or not has yet to be seen, but it is impossible to deny the influence that this has upon the irresponsible student type, which principally supplies the Swarajists with supporters.

Men and Things.

The Calcutta Branch of the European Association held its annual meeting during the week; it was but poorly attended, yet this is probably not due, as one of the speakers suggested, to the fact that the average European resents the appearance of Swaraj leaders at the meetings so as to give members an opportunity of hearing both sides. As a matter of fact the political situation has become farcical and people who have to work as hard as most men out here are apt to find little time to devote to so-called politics.

The Government have issued advertisements inviting applications from practising barristers, vakils, etc., for appointments as District Judges. This is a novelty, and it looks rather as if increasing difficulty is being found in finding good men from the Civilian ranks.

The Royal Commission on Agriculture, headed by the Marquis of Linlithgow, has arrived in Calcutta and has begun its sittings. The Marquis made a good speech at the St. Andrew's Dinner on Tuesday night and expressed the determination of the Commission to assist the Indian cultivator with a solution of some of his immemorial difficulties. They will have to deal with the *bania* effectively before they can make much progress in this direction. One of the witnesses before the Commission has given more than a broad hint to the jute industry that the day will come when a substitute for jute will be found.

The Indian Aviation Board has published a report recommending its own abolition and the appointment of a Director of Civil Aviation, and it is understood that an official of the British Air Services is to take up this post shortly. The Board also recommends the establishment of an air service between Calcutta and Rangoon; Cobham has already shown something of the difficulties that will beset a regular service.

The Venerable the Archdeacon of Calcutta, the Rev. John Godber, is retiring this week after twenty-one years' service, and he carries with him universal good wishes. Both he and Mrs. Godber have done excellent work and are exceedingly popular, and the Archdeacon has reorganised the business side of the ecclesiastical headquarters here with great success. The handsome cheque which was presented by the congregation at a farewell gathering on Monday last will enable them to buy a substantial souvenir of the years that they have spent here, happily for us as well as for themselves.

The Improvement Trust constructed a new and beautiful park in North Calcutta and in due course handed it over complete to the Corporation. They promptly changed its name from Shambazaar Park, which is geographical, to Desbandhu Park, which is political. Local residents are now writing to the papers, calling attention to the fact that it is being neglected and let down inside and out, and the deterioration of the roads and the gardens within accompany the deposit of refuse and filth around its walls. He who runs may read.

The Trivial Round.

The conditions for the races on Saturday last were ideal and the temperature was below the average for this time of the year. It was an exciting day and four well-backed favourites got home, much to the satisfaction of backers. The names of the younger owners are showing up well, and everything looks promising for the big week.

The M.C.C. have been continuing their brighter cricket, the latest example being a whirlwind hitting display at Ajmere, followed by a lightning century by G. F. Earle at Bombay. Here, however, they have been held by the Hindus who won the recent tournament, consequently having the honour of meeting the club in their first match at the Gymkhana Ground. The opinion has been steadily growing lately that Calcutta will have a good chance in the Tests, and the draw against the Hindus at Bombay has hardened this view.

The annual matches between Calcutta and Ballygunge took place on Sunday last, when the premier club succeeded in winning both matches, the first XI. at the Eden Gardens and the second strings at Ballygunge. There were three centuries at the last week-end and the pitches are beginning to settle down. With a touch of cold in the air it is perfect cricket weather.

The dancing season is now in full swing, not only in the clubs and restaurants, but all the dancing halls will be open by the end of this week. The Saturday Club functions have taken on a new lease of life, and it is clear that this year there will be more dancing than ever. By the way, has the coal strike affected the supply of dress materials?

The Symphony Concerts opened last Sunday at the Empire with a full house and "everybody" was there. Making concessions for the first concert of a full orchestra which is a regular League of Nations, the concert was a brilliant success and ended with an ovation for the players at the conclusion of Beethoven No. II.

The theatre has been much fuller this week with Selfick's "Peep Show" Company, who are putting up an excellent series of performances of the revue type and should benefit substantially on the finance side in return.

Markets.

The jute market during the week has been quiet but steady, with mills showing little interest except for good quality jute which is now gradually disappearing. Gunnies have been very quiet and prices have dropped to the extent of about 4 annas. The position in the piece-goods market shows little change, except for a slightly better inquiry for "seasonal" goods; up-country demand has fallen away further and clearances are very poor.

At the tea sale here good qualities continue to maintain good prices, stalky descriptions alone showing a drop in price.

On the Stock Exchange, the easier tendency for Government Securities obtaining last week has given place to a renewed inquiry for almost all stocks, and small rises in prices have been registered in most cases. Jute shares continued to fall until a few days ago, when a firmer hessian market brought about a better inquiry for shares, as a result of which most of the losses have been picked up. Coals have been featureless, with sellers in the preponderance; tea shares, in spite of the satisfactory sale here this week, are dull with few exceptions. The position is that the companies who have sold their crops locally should show good results, but those who sell in London have yet to sell the majority of their crop and the general opinion is that lower prices will be the rule. Rubbers have again been on offer, but with a moderate local business a number of large parcels have been readily absorbed. At current rates shares should not pay less than about 12½ per cent. and the present time would, therefore, appear to be good for the genuine investor to buy.

In the Exchange Market there has been no marked demand for remittance, but, with very few bills showing,

Digitized by Google

the market has sagged in the absence of support. Ready T.T. is quoted at 1s. 5¾d. Money is easier than last week, with rates normally quoted at half per cent. for call and short notice.

A MODEL CRIMINAL.

Recent mail papers received from India have been devoting a good deal of space to a gentleman of the name of Chasmawala, who has been under trial in Bombay for gaol-breaking. To the Magistrate he described himself as "a polished gentleman, pure in his words, with non-violence as his creed, though a thief by profession." In support of this description, he asserted that, though there were many weapons in the city that were available to him, he had, throughout his career, never made use of any, nor had he ever caused injury to any person. "Before I joined my gang, there were many given to using bad language or causing violence; but I stopped all that." He also obliged with a detailed story of his career: explaining that he started life as a schoolmaster, and rose to be headmaster of a school at which a branch post office was attached, from which he committed defalcations to the amount of 2500 rupees, was detected, tried and sentenced to three months' imprisonement. While in jail, he took counsel with his fellow prisoners as to his future mode of life. There were, he says, four or five thousand of them altogether, fifty of whom were expert crooks, and he decided to adopt theft as his profession. "Accordingly I made myself acquainted with all the methods of committing thefts: boring walls, breaking open locks, removing riveted bars of doors and windows, destroying cement and brickwork with acid—in all these and other matters I soon acquired remarkable proficiency through the teaching and demonstration of my fellow prisoners."

His regular procedure, after his release, was to pass himself off as a rich merchant; at one place he had "one or two conveyances, a treasury, a sign-board, a letter-box and three or four servants": at another, he "used motor cars freely, entertained the leading merchants with gramophones and nautch parties, went with them to theatres and took them on trips to big cities where he lodged in fashionable hotels." He even became a contractor for the supply of grain to the military authorities at Poona: and admitted that, during the three months November 1924 to January 1925, he had cleared, by the theft of money and valuables, a sum of six lakhs of rupees. His last venture was to set up a large furniture establishment, in the hall of which he established a free reading room, and where he sold the proceeds of his robberies, his stock being kept in a back room to which access was denied to all but himself. There were downs as well as ups in his business; for, despite the fact that, before his arrest in Bombay at the beginning of the present year, he had four times escaped from custody and had four times been acquitted on charges of theft, he had had to serve several sentences of imprisonment—a fact which became known to some of his friends; to whom, however, he explained that he had been sentenced, not for the theft, but for cheating —an explanation that was quite enough to re-establish his reputation.

Soon after his arrest in Bombay, he again escaped, and was not recaptured until July, when he was sentenced to two years' imprisonment; but once more succeeded in escaping from jail, only to be recaptured again. On this last occasion he declared, before the Magistrate, that the construction of his cell was so defective that it left him at least four ways of escape. At the invitation of the Court, he obligingly described all these four ways, and "was corroborated by the police officer in charge, who said that all the ways mentioned had been demonstrated by Chasmawala to the engineer who inspected the cell." The final result was that he was convicted of gaol breaking, but acquitted of having done so with violence: and received a further sentence of two years' imprisonment. It seems likely that he will really have to serve his sentence this time; unless, indeed, he had a fifth way of escape up his sleeve, which he did not demonstrate to the officials.

THE INDIAN MAIL.

Wolf Children.

Much interest has recently been aroused in India by a story of the capture of two wolf-children near Midnapore, in Western Bengal. It is asserted that, about five years ago, two girls, then aged about eight and two years, were found in a cave along with a family of wolves: that they were both placed in the Midnapore Orphanage, where the younger soon died, the elder having since remained under the care of the Principal of the Orphanage, an Indian Christian pastor named the Rev. Jai Singh. This gentleman has explained that, in the interests of the girl herself, he had not previously published the story of her origin: and the facts have only now been disclosed because the local Bishop (Dr. Pakenham Walsh) visited Midnapore recently on tour and was informed of them. It is the Bishop who has given publicity to the story, about the facts of which he is said to entertain no doubt whatever. The original narrative, as printed in an Indian newspaper, has evidently been contributed by an Indian correspondent, not by the Bishop. It was as follows:—

"About five years ago some villagers told Rev. Jai Singh that there was a certain path which they never used because it was haunted by evil spirits. Mr. Singh asked them to show him the place and they pointed out a hole. They saw nothing and at his suggestion sixteen of them started digging. After some time two wolves darted out of the hole. Then a she-wolf came to the entrance and snarled, growled and refused to move. They were therefore obliged to shoot the animal. Digging on they came to a den and found there two wolf calves and two girls, one aged two and the other about eight. They were very fierce. They darted away on all fours going faster than anyone there could run and uttering gutteral voices. They took refuge in the bush and were eventually caught. Their finger nails were worn into a concave shape through constantly scratching the ground.

"It is not an uncommon thing in this locality for children to be exposed when infants, especially if they are girls, who are not wanted, and it is probable, therefore, that the mother wolf had found one such baby and taken it home carrying it by its clothes. Later the she-wolf must have found another baby and having found pleasure in retaining cubs that remained small and did not leave the den adopted it too. Mr. Singh took them to the orphanage at Midnapore. There the younger developed dysentery and died. The elder shed a few tears, the only sign of emotion she ever gave. She is now of normal size for her age and there is nothing peculiar about her except that she sits animal-like and does nothing for hours together. Her face has a vacant appearance but when she says one of the thirty words she has learnt, especially when she greets a Bengalee and offers "namaskar" she smiles sweetly and presents a pleasing face. In the course of time she submitted to clothes. One of the things which she resented was being washed. For a long time she ate with her mouth down to the dish but eventually she was taught to use her hands. She takes no interest in other children or in toys or games. She has no fears usual with children and prefers the dark to the light. She has an over-powering desire for meat, raw if possible. Her hearing and sight as also her sense of smell are extra acute, but her touch does not seem to be developed and her memory is very weak.

"She was baptised some time ago and is called Kalema which she utters very prettily. While the two children were alive they slept huddled one on top of the other like puppies. Kalema makes no noises now except the utterings of the words she has learnt; she does not laugh nor does she cry. She is very gentle with animals and will follow them about. Scientific Societies and inevitably Mr. Rudyard Kipling are taking a keen interest in Kalema, the problem of whose training is a fascinating study."

There has been no previously recorded case of a wolf-child learning to speak a human language, or developing into an intelligent human being as Kipling's Mowgli did. It is, perhaps, for this reason that an attempt is being made in the Indian Press to discredit the story. It is, for

Digitized by Google

instance, asked why it has been kept secret for five years: whether it is not almost impossibly improbable that a she-wolf, having adopted a human baby, should adopt another five or six years later: and whether it is not likely that the two children—and, indeed all other reputed wolf-children—are not in fact children of a low and degraded caste, idiots at birth, who have been left to fend for themselves and have become half bestial in the process. These suggestions amounts, of course, to an imputation on the veracity of the Rev. Jai Singh: for which there seems to be no foundation whatever: the Bishop, at any rate, was convinced of the truth of the story. The pastor has stated his reason for his failure to divulge the facts before—not an unimpeachable one, certainly, but still one that is quite intelligible. As for the second adoption, it is not unreasonable to suppose that it was made by the elder girl, and that the mother wolf was only an accessory after the fact. Civilised girls develop the motherly instinct very early—witness their universal affection for dolls—and it is quite a natural suggestion that, in the case of a community addicted to the exposure of infant female children soon after birth, the elder girl may have found the younger and adopted it herself, recognising it, if only dimly, to be one of her own kind. And there have been too many quite well authenticated cases of the existence of wolf-children in India to allow of this, and all other similar stories, being dismissed as fables. There seems no reason at all to doubt the general truth of this particular story, in spite of its very unusual development. Normally (as Kipling makes his forest officer Muller remark) they die young; but, as the surviving girl is now about thirteen years old, she may perhaps provide an exception—so long, at any rate, as the Rev. Jai Singh continues to protect her from the importunities of well-meaning and enthusiastic scientific inquirers.

Polygamy.

The *Bombay Chronicle's* Own Correspondent at Stamboul, in discussing the new Turkish law forbidding polygamy, depicts a state of things which, it may be supposed, is intended as a warning to the Indian Muslim peasant against any similar attempt to tamper with ancient custom. We have been told that the new law will have little effect in Turkey because polygamy, though theoretically permitted, has for a good many years past been practically non-existent; but the correspondent does not seem to think that this is so. In India, though the poorest Mohammedans usually have only one wife, because they cannot afford to keep more, polygamy is certainly widely practised; but it is only a comparatively rich man who can hope to attain to the regulation limit of four. The correspondent says that "the effect of the new law on the Anatolian peasant is expected to be very deep; for he is polygamous on account of economical reasons. One of his wives tends his herd, the second one works in the field, and the third, say manages his household, and all of them weave him a carpet in winter—these are what form the chief sources of his income. Henceforward, he shall have to keep only one of them as his wife and employ the rest as wage-workers."

Election Symbols.

The use of distinctive colours, to enable illiterate voters to distinguish between the various candidates soliciting their votes, is well known in India: as also the advantage taken of it by unscrupulous canvassers, like those who, in one recorded case, adjured electors to vote for the "green" candidate, whose colour is that of fertility, and to avoid the "white" one, lest they should be stricken with the white disease of leprosy. But, in several of the contests at the present General Election, the number of candidates was greater than the number of colours that can be distinguished by the average peasant, whose maximum is usually not more than five or six. It has therefore been necessary, in these instances, for a candidate to use a symbol instead of colour: and a case is quoted by the Calcutta *Statesman*, where seven symbols were made use of: elephant, horse, scales, cycle, rose, flag and bottle. As Ganesh, the elephant-headed god, is the god of good luck, there was doubtless keen competition among the candidates to be represented by that symbol; but some of the others, if indeed they were all recognisable by the unlettered voter, must have puzzled him not a little. The *Statesman* wonders what rumours may not have been spread abroad about the candidate whose symbol is a bottle—will the voter understand that it is supposed to contain public spirit? And the paper suggests that more apropriate emblems might have been chosen: a bird (for the carpet-bagger), a lotus (for the political internee), a spinning wheel for the Swarajist, a pair of open arms for the Responsive Co-operator. "And what," asks the *Statesman*, "is there wrong with the human hand, palm upwards and slightly hollowed? In every country it has played a great part in public life."

A Poet Actor.

Bombay has been giving a great reception to an eminent Bengali "poet actor": and a local paper gives a glowing account of his performance in "the drama of the England-returned youth": in particular in a drink scene, in which "he drank red raspberry water with such an unimitable manner of the seasoned drunkard, that many persons in the audience actually mistook it for real whisky, and wondered how he could stand such copious draughts of the intoxicating drink." In addition to his powers as an actor, the poet is evidently a bit of a humorist: for, in the course of a speech that he made at the reception held in his honour, he is reported as having taken his audience "by an agreeable surprise when at the top of his voice exhorted them to relegate the face powder to the dust bin. For he wondered why they should whiten the rich brown skin which God had given them. To me the face powder (he humorously concluded) was synonymous with the gun powder, and whenever I see the face powder I feel myself blown."

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
London, Tuesday Morning.

The Egyptian Government and Cotton.

On another page in this issue will be found a statement issued by the Egyptian Government explaining its decision to intervene in the cotton market, the object of which, it is pointed out, is to prevent cotton prices falling to an unjustifiable level. The consistent fall in prices is of course the explanation for this reversal of policy, and, as I suggested last week, it is obvious that purchases of cotton now do not carry with them the risk of such substantial losses as that they would have done some little time ago. It is evident, however, from a further announcement by the Egyptian Government that there is no undue anxiety to enter the market. It is proposed to buy January contracts for Sakellarides at 23½ dollars per kantar and December and February contracts for Ashmouni at 15½ dollars per kantar, and both these cottons at present are well above these limits. He would be a bold individual who would confidently assert in view of the course of the market in recent weeks, however, that these prices will not be reached, but it is, of course, very possible that the declaration of the Government's intention, combined with the effect of the restriction of acreage, will result in stiffening the market.

Port Fuad.

To-day sees the formal opening by the King of Egypt of the new port opposite Port Said, to which the name of Port Fuad has been given in honour of the King. The actual development of the site may be said to date back to fifteen years ago when the Suez Canal Company decided to transfer its workshops from Port Said, but they were only utilised after the War. In recent years the progress made on the site has been remarkable, and already quite a small town has come into being, and if the project to make Port Fuad the terminus of the Palestine Railway, instead of Kantara, is carried out, the effect on the rapidity of the expansion of Port Fuad should be very pronounced.

The Air Route to India.

History will doubtless record as one of the epoch-making events in the development of flying the formal opening of the new Imperial route to India by the Secretary of State for Air, Sir Samuel Hoare, who is to leave Croydon for that purpose immediately after Christmas in one of the Imperial Airways' new aeroplanes. The full tour that Sir Samuel Hoare is undertaking will last six weeks. Following the flight to Cairo and then to Karachi, the machine will take him on to Delhi, another 700 miles, which is, however, but a small item in the distance to be flown. Sir Samuel Hoare is then flying in a military aeroplane to the North-West Frontier to inspect various stations, and he will subsequently return from Karachi to Cairo in an Imperial Airways machine. It is in fact a veritable Odyssey that he is undertaking, and that it should be possible only serves to show how far the science of flight has progressed in recent years. It is still in its infancy, but it is already abundantly clear that the flying machine is going to be a vital factor in Empire communications.

Steaua Romana (British).

At the meeting of the Steaua Romana (British), Ltd., Sir Charles Greenway, the Chairman, was able to give a most encouraging survey of the company's position. The production of the Steaua Romana for the year ended June 30 amounted to 352,637 tons exclusive of 17,000 tons received in payment of royalties, these figures comparing with 290,387 tons and 11,600 tons for the previous year. During that period the export of products totalled 210,694 tons, an increase of 93,000 tons. During the current year the production has considerably increased, and for the five months ended November it totalled 199,008 metric tons as against 152,077 metric tons for the corresponding period of the previous year, and Sir Charles Greenway added that a further substantial increase of production might be looked for in the coming year. As is well known, one of the chief handicaps under which Roumanian industry has laboured since the War has been the lack of adequate transport facilities, and it throws an encouraging light on the present position to know that in a period of increasing production the Steaua Romana has experienced no serious trouble in the conveyance of its products. This has been due to the efforts of the Roumanian Government and the railway and pipe-line officials to do everything possible to help the oil industry pending the development of sufficient transport.

The Roumanian Oil Industry.

Sir Charles Greenway went on to deal with the position of the Roumanian oil industry generally, and said that as a whole it continues to improve. For the first ten months of this year the production was 2,680,428 tons, as compared with 1,914,319 tons for the corresponding months of last year, and it is estimated that the production for the whole year will amount to about 3,000,000 tons. The exports of petroleum products for the period was 1,201,038 tons, or nearly double that for the corresponding period of the previous year. Sir Charles Greenway proceeded to suggest that the Roumanian authorities could greatly assist the industry by the further reduction of export taxes. The Association of Oil Industrials of Roumania has raised the question, and he expressed the hope that in the interests of Roumania's financial stabilisation and of her petroleum industry sympathetic consideration will be given to the proposals.

BANK OF ROUMANIA LIMITED
(FOUNDED 1866).

The Roumanian Budget.

Details are now available with regard to Roumania's Budget for 1927. The estimate for revenue is 35,400 million lei, while that for expenditure is put at 33,500 million lei, a surplus of 1,900 million lei thus being provided for. These totals compare with the 1926 estimates of 29,250 milion lei for revenue and of 28,250 million lei for expenditure. It will thus be noted that there is an increase in expenditure of rather over five milliards of lei, which is principally accounted for by increased salaries and pensions and provision for the external debt. How far the revenue estimate will prove reliable remains to be seen, and the view seems to be taken in some quarters that the yield will be below the estimate. In a country where taxes are already onerous the increase in expenditure is naturally likely to arouse criticism, but it was impossible to see how it could be avoided if Roumania was to meet the obligations in the praiseworthy way that she is meeting them.

The Bulgarian Loan.

To-morrow sees the issue of the long-expected Bulgarian Refugees Loan. Of the total amount of the loan of £2,400,000 the portion offered in this country is £1,750,000, the balance being reserved for issue in Holland, Italy, and Switzerland, while bonds for 4,500,000 dollars are also being offered in America. The terms of the loan are undoubtedly highly attractive, the price being 92 and the rate of interest 7 per cent., while the loan is redeemable by a cumulative sinking fund of ½ per cent. which begins to operate next year. Previous loans of a similar character have met with a ready reception, and I shall be extremely surprised if, despite the fact that it is issued at a holiday period, it is not quickly over-subscribed.

COMMENTATOR.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked L.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

EGYPT.

Uniform Clothing, Etc.—The Egyptian Customs Administration invites tenders for the supply and delivery of uniform clothing and equipment required for the year 1927-28. January 31. (D.O.T.)

Clothing, Etc.—The Department of Health, Cairo, invites tenders for the supply of clothing, equipment, tents and accessories, hardware, glassware, oils and paints, brushes and brooms, furniture and wooden articles, enamelled goods, copperware, etc., for the year 1927-28. January 20. (D.O.T.)

Dynamo, Etc.—The Director-General, Mechanical Department, P.W.M. Cairo, invites tenders for the supply and erection of a dynamo and one internal combustion engine at the Survey Department, Giza. January 10.

Asphalt.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of 3,700 tons of solid asphalt required for the year 1927-1928. March 1.

Machine Tools.—The Principal of the Royal School of Engineering, Giza, invites tenders for new high-grade machine tools and small tools. February 5.

Equipment.—The Director of Stores, Public Health Department, Cairo, invites tenders for the supply of equipment, clothing, tents, etc., for the period of one year commencing on April 1, 1927. January 20.

Paper and Stationery.—The Ministry of Finance invites tenders for the supply of paper and stationery and office requisites for the financial year 1927-1928. February 24. (D.O.T.)

Paper and Stationery.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper and stationery required for the Ministry for 1927-1928. February 24.

Drugs.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of drugs required for the period of one year commencing April 1, 1927. January 15.

Sir Sao Maung, K.C.I.E., Sawbun (chief) of one of the Southern Shan States (Burma), died on December 3. He was born in 1848 and was trained at King Mindoon's Court, Mandalay. He was a member of the Legislative Assembly of Burma.

CYPRUS IN 1925.

An Adverse Trade Balance.

Cyprus enjoyed fairly satisfactory conditions in 1924, and to a certain extent it may be said that the improvement in evidence in that year was continued in 1925. In the report for that year, which has recently been issued, it is pointed out that the produce was generally speaking well up to the average, and was disposed of in most cases with ease and profit. But while the total volume of trade expanded the growth was on the import side of the balance-sheet, and in place of the slight favourable balance of trade of 1924—when for the first time for some years the Island's exports exceeded the imports in value—there was a considerable adverse balance of trade. The value of the exports was £1,198,615 as compared with £1,271,399 for 1924 and £893,733 for 192- while that of the imports was £1,593,436 as against £1,243,405 for 1924 and £1,072,573 for 1923. But figures, while they may be significant, are by no means conclusive. In the present case the import total was considerably increased by imports of machinery for mines, the value of which was £41,430, or more than double the figures for the previous year, and implements and manures required for agriculture, to say nothing of motor cars, motor cycles, etc., the increasing demand for which is an indication of the development of the Island's communications. "The excess of importation," in the words of the report, "is in part to be attributed to enterprises undertaken with capital from abroad, and is indicative of the increased purchasing capacity of the community generally."

It has already been noted that the year was not unfavourable as regards produce, but while there was an improvement on the previous year the cereal harvest was affected by a scarcity of rain in March and April. Barley was particularly affected, and the yield of this crop was again disappointing. There was again a good carob crop, but the cotton crop showed a slight decrease on the previous yield, while the flax crop also failed to come up to expectations. The fruit crops did excellently throughout the country. Cyprus oranges enjoy a deserved reputation, and it is worthy of note that considerable extensions of the cultivation of this fruit are now taking place. The Cyprus orange met with a very favourable reception at Wembley, and no doubt this has been a great encouragement to the growers.

It goes without saying that the most interesting feature of the commerce statistics is the distribution of the trade. As regards imports there has been a distinct improvement in the position of the United Kingdom and other parts of the British Empire, whose share of the trade totalled £701,342 or 44.29 per cent., as against £516,365 or 41.53 per cent. for the previous year. On the export side the position is not quite so satisfactory as it was in 1924. The United Kingdom's imports from Cyprus amounted in value to £238,844, the percentage being 19.93, while for the previous year the figures were £301,504 and 23.71 per cent. On the other hand, the imports of the other parts of the British Empire increased from £12,169 to £25,148, the respective percentages being 0.96 and 2.10. It would seem obvious from these figures that the first year that Cyprus was represented at Wembley had not yet had very definite results, but when the next report is forthcoming one may expect to see indications that the great advertisement that Cypriot products received at the Exhibition has begun to have a marked influence on the trade returns. It may be noted *en passant* that the report mentions that "a Government Committee of Trade and Agriculture has been constituted in Cyprus to carry on the work of making Cyprus goods known abroad and to disseminate in suitable quarters the knowledge acquired at Wembley.

As regards the finances of the Island, the revenue showed a further satisfactory expansion, the figures being £668,130, or £59,831 more than the estimate and comparing with £593,318 for the previous year and £567,389 for 1923. Adding the grant in aid from Imperial funds, the total revenue was £718,130. On the other hand, the

Digitized by Google

expenditure rose from £525,870 to £619,621, and with the Cyprus share of the Turkish debt charge the total was £712,400 as against £628,670. There was thus a balance of revenue over expenditure of £5,710 as compared with £14,648 for the previous year.

If the results of the year are not exhilarating, it is at any rate evident that the Island is now progressing surely if slowly, and it has to be remembered that one must not expect an unduly rapid advance in the case of a region whose economic basis is in the main agriculture, and that conversely it is inevitable that there should be occasional vicissitudes. The report makes light of the adverse trade balance, and it may be hoped that it is really a case of *se reculer pour mieux sauter*, and that the next report will show that commercially 1926 has been quite as satisfactory as 1924.

TURKISH RAILWAY PROJECTS.

(From a Correspondent.)

Considerable space is given to the railway policy of the Turkish Government in the *Milliet* of December 4. The article states:—

"The negotiations with separate foreign financial groups regarding the construction of the Anatolian Railways have now materialised. Ismet Pasha's Cabinet has spared no pains and no sacrifice in initiating and developing their policy, and in this the Cabinet was supported by public opinion.

"Three or four years ago some people could hardly help expressing doubts about the success of this railway policy, and there were those who believed we should never be able to build railways ourselves. But the Government has been able to achieve such success in the last few years that no doubt can be entertained of its capacity.

"Both the young engineers and the industrious workmen, with the Government at the head of affairs, have each reason to be proud of their own efforts in producing such results in so short a time. The Anatolian peasant knows what a railway means, and he welcomes the sound of the steam whistle.

"But though Ismet Pasha's Government made us build our own railways, it had no objection to importing foreign capital. This has been emphasised many times, and the Government has never refused to consider a workable project by foreigners.

"Notwithstanding the spite of certain European journals who depicted our Government as the enemy of foreign capitalists, it has shown its readiness to enter into negotiations with Belgian and Swedish financial groups for railway construction, and agreements will shortly be concluded.

"Belgian, Swedish, and German groups are concerned, and the Ministry of Public Works is considering each proposal separately. These are as follows:—The Swedish Group: Ulukishli-Kaisarieh Railway; Erekli Harbour; Siwas-Erzingan Railway; Malatia-Arghana-Diabekr Railway: Angora-Erekli Railway. Belgian Group: Kaisarieh-Siwas Railway; Tokat-Siwas Railway. The total length of these lines is 1,400 kilometres. The companies will bring their own materials from their own countries. The Swedish company is opening an office in Pera and one in Stamboul."

An India Office communique states that from April 1 to December 11, £20,425,000 has been transferred from the Paper Currency Reserve in England to the Treasury Account of the Secretary of State for India in Council. Of this amount, £1,425,000 was on account of telegraphic transfers on London sold by the Government of India.

The traffic receipts of the South Indian Railway Company for the week ended November 20 amounted to Rs.5,04,352, making the total from April 1 Rs.333,15,641. The totals for the corresponding periods of the previous year were Rs.4,88,057 and Rs.338,07,623.

EGYPTIAN GOVERNMENT AND COTTON PRICES.

Decision to Intervene.

The Egyptian Government has issued the following statement through its Legation in London:—

The Egyptian Parliament has just made a decision to the effect that the Government should intervene in the cotton contract market. This decision, which has no speculative character, has as its sole object the formation of a barrier to oppose all attempts of lowering cotton prices to an abnormal and unjustifiable level. Furthermore, contracts of purchase are subordinate to the actual delivery of the goods at the day of maturity. Nor has this decision any purpose of exercising pressure on the market to raise the prices artificially; on the contrary it tends to purify the market and to combat certain local elements which influence it and which are alien to the other world-wide factors. It is these manœuvres of local speculation and certain abnormal conditions of the market which the Egyptian Government wished to combat. It is not only the Egyption producer who will find himself protected by this measure against the consequences of the said manœuvres, but the spinner himself will profit equally by it for it will assure him a market more stable and purified from all artificial elements.

COMPANY NOTES AND REPORTS.

BARCLAYS BANK (DOMINION, COLONIAL, AND OVERSEAS).

The report for the year ended September 30 last states that after payment of all charges, full provision having been made for bad and doubtful debts, the net profits (incorporating the profits of the Colonial Bank and the Anglo-Egyptian Bank, Ltd., as from July 1, 1925, and those of the National Bank of South Africa, Ltd., as from April 1, 1925) amounted to the sum of £637,020 11s., to which has to be added the sum of £27,329 18s., being the undivided profit as at June 30, 1925, of the Colonial Bank, making a total of £664,350 9s., which has been appropriated as follows:—To expenses of amalgamation and provision for income tax, £230,235 16s. 9d.: to reserve fund, £100,000; to interim dividend (from July 1, 1925, to March 31, 1926) paid May 1, 1926, at the rate of 8 per cent. per annum on the cumulative preference shares of £1 each fully paid, less income tax, £86,064; to final dividend (from April 1 to September 30, 1926) at the rate of 8 per cent. per annum on the cumulative preference shares of £1 each fully paid, less income tax, payable January 21, 1927, £57,376; to dividend of 3 per cent. on the "A" shares of £1 each fully paid, and the "B" shares of £5 each, £1 paid, less income tax, payable January 21, 1927, £76,380; balance to be carried forward, £114,294 12s. 3d.—£664,350 9s.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, December 10.

The New Statutes of the National Bank.

The Sobranye has voted a law modifying as from January 1 next the statutes of the National Bank. The measure is one of those which the Finance Committee of the League of Nations had recommended to the Bulgarian Government and on the execution of which the approval accorded by Geneva to the Refugee Loan was made dependent. It is natural that at a time when Bulgaria is going to contract new external debts her lenders and their sureties should engage themselves in assuring that the stability of the Bulgarian currency will not be endangered and consequently desire to see the conditions of functioning of the issuing institution improved.

The new law aims at increasing the independence of the bank in relation to the State. On this point the innovations are still tentative. Its Budget has no longer to be approved by the Minister of Finance, but that change is of secondary importance. The National Bank remains a State Bank. Its capital will not include any private participation; its administration and direction remain in fact in the hands of the powers that be. The capital will continue to be constituted by the State. The new law provides for its increase from 500 millions to one milliard leva, and the increase will be made by means of the funds arising from the net profits of the bank—funds which normally would be allocated to the Treasury.

It is also the State which assumes the responsibility for eventual losses of the bank. A reserve fund is constituted to which will be allotted 25 per cent. of the annual profits until the fund attains one milliard leva. If the reserves were at any time insufficient to cover the losses of a year the deficit would be met by the Treasury, provision being made in the Budget of the year according to the sums allocated for that purpose.

The administration of the bank is entrusted to a board of eleven members who include the Governor and two sub-Governors, four directors chosen from the high officials and four chosen from outside the bank. The last four directors will be elected for four years: two by the Chambers of Commerce of Bulgaria, one by the Administration of the Sofia Bourse, the fourth who must have special knowledge of agriculture—by the President of the Departmental Councils.

The inclusion on the board of directors who are not officials is evidence of a desire to strengthen the independence of the bank, but the innovation remains modest in view of the seven official seats and because, however important the functions of the board, the control of the bank is in fact in the hands of the executive committee which includes only the Governor and the two sub-Governors, all three nominated by decree on the proposal of the Minister of Finance and removable by the decision of the Sobranye on the report of the same Minister. The executive committee has very extensive powers; it can take decisions on all questions within the competence of the board with the proviso that they are later approved; since the four directors who are members of the high personnel of the bank are appointed by the executive committee it follows that the ratification is normally assured.

Although the position of the Governor and the sub-Governors is surrounded by greater safeguards than those of the greater part of the high officials of the State, it can be affirmed that the administration of the National Bank remains in the hands of the power that be. The control of the State which has hitherto been exercised through the intermediary of a board of inspection will be henceforth entrusted to a Commissioner who will have the right of opposing all measures taken by the board or the executive committee in violation of laws and regulations.

A discount committee will be established near each branch and agency, the members of which—henceforth strangers to the personnel of the bank—are nominated by the Chambers of Commerce.

The modifications of the statutes of the National Bank as regards the fiduciary circulation and the advances to the State are much more important than those concerning the administration. Based on the same principles as the law of June 30, 1922, to prepare the return to convertibility of the notes issued, they mark a new stage on the road which ought to lead to that end—an end which the authors of the law do not consider far distant, since they announce that the repayment of the paper money in gold will be the object of a special law.

In June, 1922, they had to be content to fix a rigid limit to the uncovered balance of the Treasury and the fiduciary circulation; the liabilities of the State might not exceed 4,700 million leva; as regards the limit of the fiduciary circulation it might only exceed the total of the liabilities of the State by an amount equal to twelve times that of the metallic reserve (valued in gold leva). In the new law the limit of the circulation is fixed in a more flexible and also more reasonable manner; the total of the liabilities at sight of the bank (notes issued and deposits at sight) must not exceed three times the total—valued in leva—of the metallic reserve and of the possession in foreign exchange. This covering of 33⅓ per cent. is considered as a minimum, and the law lays it down that it should be normally 40 per cent.

As regards the debt of the State to the bank the new law confirms in article 71 the conditions stipulated in the law of June 30, 1922, and consequently the limit of 4,700 millions; the temporary over-extensions that the law of 1922 provided for in the form of the discount of Treasury Bonds may not henceforward exceed 300 million leva. Advances to the State thus being limited the law provides that they shall be amortised each year by at least 150 millions. This amortisation will be secured by its inclusion in the Budget—as has already been done for the present year—until the capital of the bank amounts to one milliard leva; from that time the part of the profits of the bank assigned to the State, becoming disposable, will be allocated to the amortisation, and will lighten at the same time the general Budget which will no longer bear the annual charge of 150 millions. Further, it is specified that the profits which may be obtained by the State from putting into circulation money shall be allotted to the amortisation account.

The law enumerates minutely the banking operations which the National bank is authorised to make. From the list of these operations are excluded mortgage loans and generally all long term undertakings; all advances to communes, departments, and public establishments; all participation in commercial or industrial affairs (under this heading the National Bank must terminate its participation in the Banque Centrale Co-operative and the Banque Internationale de Bulgarie). A mortgage bank will be created later which will take charge of mortgage and communal credits.

It is not to be doubted that this law for the reorganisation of the National Bank presents—as the Minister of Finance remarked in concluding his explanation of the law—considerable importance for the financial and economic recovery of the country.

The 1926 Sugar Season.

As is well known, Bulgaria's five sugar refineries produced in 1924 almost twice as much sugar as the country could consume in the course of a year, and, being unable to export the surplus owing to the very high net cost, they resolved to close down in 1925. Four of these com-

and FURNESS, WITHY & CO., Ltd., Royal Liver Building, Liverpool

Digitized by Google

panies resumed work in 1926; the Sofia sugar refinery, however, deemed it desirable to remain inactive for a further year, in view of the hazardous state of the industry. In the 1926 season the following conditions obtained: it was agreed to pay the farmers 620 leva per ton of beetroot (as against 820 leva in 1924); the Government fixed the import tax on foreign sugar at 8.25 leva per kgm.; an agreement was arrived at between the sugar refineries to limit the sowings, with a view to avoiding a new crisis of over-production; only 15,500 hectares were sown, as against 25,000 in 1924.

Unfortunately, owing to unfavourable atmospheric conditions—in the spring there was a period of heavy rains which delayed the sowings, and during August and September and October, a period of drought which hindered the growth of the beetroots—the beetroots available for the refineries fell below the estimated quantity, viz., 11 to 12 tons per hectare as against 18 tons in 1924. On the other hand, the yield in sugar is generally superior to that for 1924: in the south of Bulgaria 13 to 14 per cent. of white sugar was registered at the laboratory.

In spite of the increase in the richness in sugar, the total production, owing to the low tonnage of beetroots treated, will be less than was estimated; it is expected to amount to 2,800 wagons of sugar, say 28,000 tons. This quantity, which should not be enough for the country's needs (the internal consumption, which is increasing every year, was estimated for this year at about 30,000 tons, say 6 kgrs. per head per inhabitant) would seem to suffice until the 1927 season; the very abundant grape harvest of 1926 has, in fact, reduced the consumption of sugar for some time; there has been competition this autumn on the part of the jam trade for the grapes at a very low price; besides it was not anticipated that this year it would be necessary to use sugar in the operations of wine-making.

The sugar crisis can, it is hoped, be considered over. The conditions of the 1926 harvest, assure to the grower a reasonable return on his work (the price per ton of beetroot fixed at 620 leva, or 4.42 dollars, being higher than the pre-War, which was 4 dollars) to the sugar refining companies the possibility of working at a profit, to the State the certainty of having to fear neither the importation of foreign sugar and the consequent disturbance of the commercial balance nor the closing down of the refineries with the consequent effect on the public treasury, the country's general economic condition and the good name which Bulgaria must keep in the opinion of foreign capitalists.

Of the five sugar factories in Bulgaria there are two large ones, each employing 2,000 workers, viz., the one at Rustchuk, formed with Belgian capital and the other at Gorna-Orehovitza, founded with Czech capital, which have also refineries and are developing, especially that at Gorna-Orehovitza, a certain number of allied industries; two are small factories, at Kayali (near Bourgas) and at Plovdiv (Philippopolis), which work with French capital, and the last one, which at the moment is not working, is that at Sofiia.

The sugar factories of Gorna-Orehovitza and Rustchuk show promise of a brilliant future in the country.

The Archbishop of Melbourne has accepted the honorary Episcopal Canonry of Pisgah in the Cathedral Church of St. George in Jerusalem, vacant by the death of Archbishop Lowther Clarke.

The Hon. Laura Adeline Wood, of Melton Park, near Doncaster, widow of Lieutenant-Colonel the Hon. Henry John Lindley Wood (brother of Lord Halifax and uncle of Lord Irwin, Viceroy of India), who died on September 25, aged 72, left estate of the gross value of £41,207, with net personalty £40,676.

Major-General Hamilton Chapman, of Wilbury Road, Hove, formerly of the 8th Cavalry, Indian Army, an Indian Mutiny veteran, who also served on the first Afghan War, and who died on October 6, aged 90, left unsettled property of the gross value of £1,546.

Company Meeting.

STEAUA ROMANA (BRITISH), LTD.

Production Considerably Increased.

Sir Charles Greenway's Speech.

At the sixth ordinary general meeting of Steaua Romana (British), Ltd., held on December 15 at Winchester House, Old Broad Street, Sir Charles Greenway, Bart., who presided, said that since the last meeting the Steaua Romana, Bucharest, had increased its capital from 666,250,000 lei to 86,625,000 lei in order to provide funds for the exploitation of their areas of proved State lands and for refinery and pipe-line extensions. The British company had taken up its proportion of such increase.

The dividend paid by the Roumanian company for the year ended December 31, 1925, was 20 per cent. The Steaua Romana's production from July 1, 1925, to June 30, 1926, was 352,637 tons, exclusive of 17,000 tons received in payment of royalties, as compared with 290,387 tons and 11,600 tons respectively in the previous year. The total quantity of products exported during the same period was 210,694, an increase of 93,000 tons on the previous year.

Since the end of the financial year, that was to say, since June 30 last, production had again considerably increased, thus, in July it was 34,156 tons; in August, 40,058; in September, 40,144; in October, 47,090; in November, 37,590—making a total for the five months of 199,008 metric tons, as compared with 152,077 metric tons during the corresponding five months of last year.

The October production was a record in the history of the company. The decrease in the November figure was, they were advised, due to purely temporary causes, and a substantial further increase in the annual production might be looked forward to with confidence in the coming year.

Thirty-one thousand metres were drilled during the year under review, an increase of 36 per cent. over the previous year. On the State lands acquired by the Steaua Romana Company 18 months ago the drilling of 29 wells had been undertaken. Seven of these were already producing, and it was anticipated that a number of others would come into production in the spring of next year.

At Ceptura, Well No. 4, which came into production in August, 1925, continued to produce steadily, and had up to date yielded 59,000 tons. This well was situated at a considerable distance from other productive wells on the same anticline, which tended to prove that Ceptura was a much more extensive field than had hitherto been realised. Four wells, upon which drilling was commenced at the beginning of this year, had reached a depth of about 800 metres, and would, they anticipated, come into production early in the New Year. Considerable improvements had been effected in the refinery, and electrical current was being received satisfactorily from Steaua Electrica, of the capital of which the Steaua Romana holds 50 per cent. Steaua Romana's fleet was fully occupied, and freight rates were much higher.

No serious trouble had been encountered by the Steaua in the conveyance of its products during the year. This satisfactory result was due to the assistance given by the Roumanian Government and the railway and pipe-line officials. Further improvements in transport could be expected in the near future as a company was about to be formed to construct an eight-inch benzine pipe-line from Ploesti to Constantza.

The position of the Roumanian oil industry as a whole continued to improve. The total production of the country for the first 10 months of this year was 2,689,438 tons, as compared with 1,914,391 tons for the corresponding period last year. It was estimated that the total production this year would be about 3,000,000 tons. The amount of petroleum products exported from Roumania during the same period was 1,201,038 tons, as compared with 636,235 tons for the corresponding period of 1925.

He should like to take this opportunity of pointing out to the Roumanian authorities that they could materially assist Roumanian oil exporters by the further reduction of export taxes. This subject had already been brought forward for discussion by the Association of Oil Industrials of Roumania, of which the Steaua Romana's very able Director-General, M. Osiceanu, was the president; and he ventured to hope that, in the interests of Roumania's financial stabilisation and of her petroleum industry, sympathetic consideration would be given to the proposals which were to be made.

Although British companies working in Roumania had come to an arrangement as to the payment of their War damage claims, and it was understood that French and Belgian companies had agreed to accept the same terms, no arrangement had yet been made with the Steaua Romana Company or with the American and Dutch companies operating in Roumania.

Turning to the accounts of the British company, the Chairman said that 210,752¼ shares in Steaua Romana were held, costing £1,146,531, which represented a substantial reduction in the average cost of the holding. The profit for the year, before making provision for taxation, was £103,209 5s. 2d. After providing for taxation the balance remaining was £83,034 5s. 2d., which, added to the balance of £2,979 12s. 5d. brought forward from last year, made a total of £86,013 17s. 7d.

The value of dividends received upon the company's holding of Steaua Romana shares had increased. Trading profits for the year

Digitized by Google

had also increased by over £7,000, and further improvement in earning from this source could be confidently expected. Gross managerial charges were approximately the same.

A shareholder had written to him urging that the dividend should be increased to 5 per cent. It would have been practicable for them to have recommended this rate of dividend, but he thought they would all agree with him that it was wiser to pay the smaller rate and gradually to increase their dividends as the position of the company improved. Notwithstanding the great disadvantage that they had been under owing to the heavy depreciation in the value of the lei—to-day only about one-fifth of the value ruling when their investment in Steaua Romana shares was made—they had gradually brought the company round to a position which enabled it to pay a moderate dividend. That had been due largely to various changes in their financial arrangements with tho Roumanian Group for which they were indebted to the valuable services which had been rendered by Sir Albert Stern—and now that there was added to that the considerably improved prospects of the Steaua Romana Company itself, he thought they could look forward with confidence to gradually increased dividends for their own company, but in the meantime their policy should be not to disperse all their earnings up to the hilt, but to keep some of them in hand to assist in further improving the position of the company.

The motion embodying the adoption of the report and accounts and the directors' recommendations to pay a dividend, on December 18, on the ordinary shares at the rate of 4 per cent. per annum, less tax absorbing £64,000, and to carry forward the balance of £22,913 17s. 7d. was proposed by Sir Charles Greenway, seconded by Sir Albert Stern, and carried unanimously.

DEVELOPMENT OF THE PORT OF KAVALLA.

Kavalla is now the fourth city in Greece, ranking after Patras. Its growing importance as an export centre for Greece's largest source of income—tobacco from the rich productive region of eastern Macedonia—is reflected in the rapid progress being made in the city's public works (says the American Consul at Salonika, Mr. Robert F. Fernald, in a recent report).

In April public bids were received by the port commission of Kavalla for the construction of a new port, at an estimated total cost of approximately 100,000,000 drachmæ. The completion of the plans will do much to make Kavalla an important competitor of Salonika as a centre for the foreign trade of Macedonia.

Considerable progress has been made in the improvement of the city's water supply. Kavalla has always suffered from the lack of water and of a system for its distribution. For the most part no running water has heretofore been available inside of the buildings. Most of the water has been obtained at public fountains and transported to private homes, either by family members and servants or by the many small vendors who carry the water in petroleum tins and horse-drawn tank carts. Since 1922, when the population of the city increased from 20,000 to over 80,000 after the great influx of Anatolian refugees, the water supply situation has become acute.

In 1923 a water commission was formed, with the right to collect certain special taxes to be used in hydraulic works. In 1925 this commission granted a 9,500,000 drachmæ contract to an Italian hydraulic engineer, who has since sunk three new artesian wells at Tekir-Bunar, 51 metres above sea level and 6 kilometres from Kavalla. Machinery for the projected pumping station has been ordered, and the installation of storage tanks and of pipes connecting them with the wells is expected to be completed this autumn. Work will then begin on the network of distribution pipes within the city.

Since 1922 nearly all the shops and homes in the municipality of Kavalla have been supplied with electricity from a power and light plant having a capacity of 300 horse-power. Street lighting was changed from kerosene lamps to electric bulbs, and the large tobacco companies ceased operating their individual electric installations and obtained their current from this municipal centre. With the increased demand, the plant is no longer able to supply the entire requirements of the town, and police orders adopted in the interests of economy now limit the use of current as motive power to certain hours of the day. In the summer of 1926 new machinery was ordered from Switzerland, which will extend the capacity of the plant to 700 horse-power.

The city still lacks adequate public transportation facilities, and the municipal authorities have emphasised the importance of providing them in the near future. There is no street-car line, and only a few taxi-cabs are operated for public transportation. A certain number of free-lance automobiles afford communication with the villages and towns of the interior, and there are a number of privately owned automobiles.

The city is built on a mountain slope along the sea front and covers an area about 1 kilometre in width and 5 kilometres in length. Its narrow streets present difficulties for the construction of a street-car line; but since the installation of the refugees new boroughs have been added, and the city is now so densely populated that the need of improving transport has become most urgent. Although there is yet no definite plan it is thought that, after the enlargement of the electric plant, it will prove practicable to construct and operate a narrow-gauge street-car line from one end of the town to the other.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maimyo for Port Said, Colombo, Madras, and Calcutta (London, December 24); s.s. Mahratta for Port Said, Colombo, Madras, and Calcutta (London, January 8).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, December 29).

British India Line.—S.s. Rajula for Bombay and Karachi (London, January 1); s.s. Mashobra for Colombo, Madras, and Calcutta (London, January 1).

Cunard Line.—S.s. Pavia for Ceuta, Gibraltar, Genoa, Leghorn, Naples Palermo, Messina, Catania, Bari, Gruz, Venice, Trieste, and Fiume, also Corfu and Ancona if inducement (Liverpool, December 24, Swansea December 29); s.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Glasgow, Swansea and Liverpool, January 29).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, January 12).

P. and O. Line.—S.s. Razmak for Bombay (London, December 24); s.s. Rajputana for Bombay (London, January 7).

Prince Line.—S.s. Soldier Prince for Malta, Alexandria, Syrian Coast, and Cyprus (London, January 5).

Ellerman and Papayanni Lines.—A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 31); s.s. Assyrian for Gibraltar, Melilla, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool January 1, Swansea January 1); s.s. Grodno for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool January 8, Swansea January 11); s.s. Mardinian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, January 12); s.s. Bavarian for Algiers, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 22). * Subject to sufficient inducement. Transhipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT.
Indian Government Vouchers accepted.

Passenger sailing dates :—

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, December 22.

The volume of business passing in the Stock Exchange has been on the small scale normally associated with the period preceding the Christmas Holiday. But while the markets are very quiet the general tone keeps fairly firm. Anticipations of a reduction in Bank Rate early in the New Year are responsible mainly for the steadiness of prices in the gilt-edged market. Whether these expectations will prove to have been justified time alone can show, but they are based mainly on the position disclosed in the recent weekly statements of the Bank of England, which show a very much stronger position than was revealed at this time last year. There is, of course, no question but that a period of cheaper money would greatly assist in the process of revival of trade. Bank rate, it may be recalled, has been unchanged at 5 per cent., since December 3, 1925, and although the technical position in the early summer warranted a reduction, no change was made owing to the industrial situation. Now that the latter is clearer and the Bank of England is once again in a comparatively strong position, the optimists who look for a lower Bank Rate in the not distant future seem to have some ground for their hopes.

In other directions the markets have provided very few features. Home Rails are still in hesitating mood in spite of improved traffic returns, for the dividend season is approaching and uncertainty as to the cuts that will be made acts as a disturbing influence. In the industrial section, iron and steel shares have slightly improved, partly on the optimistic tone of the chairman's speech at the annual meeting of Dorman, Long and Co. Prices of Armstrong Whitworth securities fell heavily on the publication of the proposed scheme of arrangement which asks for a moratorium of five years on the interest of the debentures and notes. Prospects of dividends on the preference and ordinary capital are, of course, postponed to the dim future, and prices have fallen to a few shillings. The declaration by the British American Tobacco Co., of a dividend which accorded with expectations, stimulated the tobacco share market a little.

Amalgamations and Markets.

Discussions and rumours of industrial amalgamations and combinations are a big factor in the stock markets just now. The chemical combine and colliery amalgamations have recently been achieved, and there is talk of further big amalgamations in the near future, of which one is expected in the electrical equipment industry. It may be puzzling to some investors why it is that as soon as rumours of amalgamation get about the shares supposed to be involved almost invariably rise. Amalgamations may be good or bad. Sometimes they even mean a serious watering of capital. At others they mean a saving of overhead charges and elimination of waste; results of which will only accrue very slowly. Sometimes, it is true, they carry immediate prospects of substantial benefit to shareholders. But whatever the type of amalgamation in prospect, speculators rush to buy the shares, and frequently burn their fingers, unless they are very shrewd, because prices frequently relapse when rumours are denied or actual terms published. The main explanation why speculation is stirred by amalgamation prospects is the knowledge that sometimes shares are taken over at well above market values, and each time speculators hope that they are on one of these good things.

Serious holders of shares in companies involved in amalgamations are often somewhat anxious over the problem whether they ought to agree to the terms offered them or to stand out for independence. On the whole one may say that in all cases, except those in which there is a spontaneous and vigorous oposition from large shareholders, the ordinary humble holder should acquiesce in what is offered to him. If he refuses to exchange his shares he will find himself holding a part of a very small outstanding remnant of shares, in which there will always be a restricted and unsatisfactory market. If he exchanges he will obtain shares in which a wide and free market will always exist.

Promising South African Outlook.

In the course of the past few weeks the commercial outlook throughout South Africa has undergone a decided improvement and there is a more confident tone in business circles than has been in evidence for some time. Two of the more noteworthy factors that have contributed to this brighter prospect are the success of the Imperial Conference which has warded off threatening political storms and the satisfactory rains that have fallen throughout the drought-stricken districts of the country. Though at the moment traders complain of a shortage of money, their position will doubtless improve when the farmers have recouped themselves by the disposal of their produce. And many of the farmers can look forward to a generous return. The yield of wool this year has constituted a record and the wool market continues strong, so that the sheep farmers are very favourably situated. Again fruit farmers in the Western Province and along the south-west belt are expecting an exceptionally heavy crop suitable for export and provided that sufficient cold storage accommodation can be obtained on outgoing steamers growers should have a profitable year.

As for South Africa from the investment point of view, the Union has not been so large a borrower as some other members of the British Commonwealth. The securities quoted on the London Stock Exchange are chiefly 5 per cent. stocks, there being one 4 per cent. and one 6 per cent. The 4 per cent. of which £8,000,000 is available and is redeemable 1924-63 gives a return of £4 17s. per cent. while the 6 per cent., of which nearly £11,000,000 is outstanding and is redeemable 1930-40, yields £5 15s. per cent. The 5 per cent. 1940-60 returns approximately £5 1s. per cent., there being £8,000,000 available.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended December 9 state :—

Since our last report the market has been very active and fluctuations have been wide; at the close to-day the tone of the market was decidedly weak. The week's price movements are as follows:—Sakellaridis: January, 24.00 dollars, 0.70 dollars down; March, 23.93 dollars, 0.84 dollars down; May, 24.08 dollars, 0.87 dollars down; July, 24.13 dollars, 0.87 dollars down; November 1927, 24.70 dollars, 1.00 dollars down. Ashmouni: December, 15.58 dollars, 0.39 dollars down; February, 15.92 dollars, 0.41 dollars down; April, 16.17 dollars, 0.49 dollars down; June, 16.37 dollars, 0.49 dollars down; October 1927, 16.85 dollars, 0.60 dollars down.

Sakel.—The week opened with the Sakel market very poor and on the 4th instant January was marked as low as 23.20 dollars. The banks were selling against financed cotton, whilst the local speculative crowd were putting out short sales at every opportunity, and the market, already rather depressed by the weight of the heavy daily arrivals and the relatively poor demand, was in no condition to withstand this flood of selling. As a result of this further sharp fall, the Government was again appealed to by the Agricultural Syndicate and several of the big growers to intervene in the market as a buyer in order to stem the decline. Rumours quickly spread that further Government intervention was imminent, and bear covering quicky raised prices again to about 25 dollars.

The reaction, however, was but momentary; the rumours of Government intervention were not confirmed whilst in the meantime, the rise had practically killed the demand from abroad, so that prices soon got on the downward path again and the close to-day gave 24 dollars for January and the tone weak.

Reports from consuming centres are not at all reassuring; present prices are considered too high in comparison with other growths and a falling off in trade takings is looked for. It is to be hoped that the Government will promptly and definitely refuse to intervene further, and thus leave the market free to adjust itself according to the dictates of the inexorable law of supply and demand.

The Draft Law for the reduction of the acreage under cotton during the years 1927, 1928 and 1929 to one third of the total cultivable area has been discussed in Parliament and accepted in principle.

Uppers.—This market has followed, more or less, the fluctuations of the Sakel market, but the undertone is rather better. The demand from abroad is fairly good, the chief buyer being America.

The American Bureau Report issued last evening gave 18,618,006 bales as estimate of the American crop against 18,399,000 bales a fortnight ago. Although slightly less than expected it is, nevertheless, a colossal figure.

The week's receipts amount to 338,926 krs. against exports 226,982 krs: the stock in Alexandria stands at 2,849,234 krs. The official figures of arrivals and exports for the period September 1 to December 2, are as follows: —Arrivals: Lower Egypt 1,964,000 krs. Upper Egypt, 1,485,000 krs. Total 3,449,000 krs. Exports: Sakel, 741,943 krs., Ashmouni 996,458 krs., Various 110,731 krs. Total 1,849,132 krs.

Spot:—During the week under review there has been considerably less activity at Minet el Bassal. Demand from abroad has fallen away and sales amount to about 21,500 bales of which we estimate 9,100 bales Sakellaridis, 11,700 bales Ashmouni and Zagora, 600 bales Pilion and 100 bales White. Arrivals continue on a considerable scale and the stock mounts apace, but offerings are on a much reduced scale, a great deal of cotton being withheld from the market. This is due, probably, to hopes of Government intervention improving the price.

Sakellaridis:—A moderate business has been done covering all grades Spot differences are without much change, but with a slightly easier tendency for the grades below Good Fair. The selection of spot cotton offering is much poorer than last week and it is evident that cotton of good staple and character is being very largely held whilst the poorer lots are offered for sale.

Ashmouni and Zagora:—A very fair business has been put through in all styles and Zagora has found rather more friends this week. Spot differences are slightly stiffer than last week. Considerably less cotton has been offered for sale, many holders preferring to wait to catch the February premium or asking stiff premiums on February which buyers are naturally unable to pay.

Pilion:—A moderate business has been transacted. Spot differences are rather easier.

Brown:—Is neglected and no business is reported. Quotations are generally a little cheaper than last week.

White:—A moderate business has been done at about last week's parities.

Up-Country:—Business in the interior is very moderate, and the small growers have shown rather more favour to the Government scheme of advances. Up to the 4th instant, the total advances under the Government scheme were £E638,138, against 204,749 krs.

The report of the Alexandria General Produce Association for November reads:—Lower Egypt.—The temperature during November was favourable to the last picking which was, however, of small importance. There is no more cotton remaining on the plants. The result in quantity for the crop, as a whole, as was stated last month, is less than last year. The ginning yield is superior to last year.

Upper Egypt.—There was practically no cotton in the fields in November and there is nothing to add to last month's statements. Taking into account all the information given us, we estimate the total crop to be about 7,500,000 kantars.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended December 15:—

Egyptian Futures.—Sakel Contract.—Although values show a slight decline from last week's level, the undertone has shown some degree of improvement, and increasing resistance to any further material decline appears to be gradually developing. We attribute the prevailing tendency to the firm tone shown latterly by the American markets, and also, perhaps in a more marked degree, to the strength recently in evidence in our near positions. The takers up of the November dockets are finding a fairly ready demand for their cotton at a profitable premium, and cognizant of this January "shorts" have been actively transferring their cotton to more distant positions in anticipation of this option being the subject of a further deal on the part of those who worked the November operation. We concur with the general market reading of this situation, as, provided the local contract continues to run at a narrow difference with the overseas market and at a heavy discount with spot values, there is nothing to bar a further appreciation in the near month premiums. Throughout the week, we have received little assistance from the Alexandria market; reports from the other side are to the effect that considerable dissension amounting almost to a political crisis has arisen over the question of intervention or non-intervention in the stabilising of cotton values. Apparently, the question is still open between the contending parties in the Cabinet, but we understand that a decision is to be made at a meeting to-day. Should values be left to run their normal course some temporary weakness may be expected, but on the other hand any hint of Government intervention will probably be the signal for considerable "bullish" activity and a consequent sharp upward movement. The official final crop estimate was received here on Tuesday: this shows a figure of 7,223,000 kantars, of which 2,970,000 kantars

Digitized by Google

are Sakel. The total is about a quarter of a million kantars below that of the Produce Association, and is generally regarded as being on the low side; it had no effect on the market.

There are no new features to report in the trade situation, business in this quarter continuing to be restricted. Latterly, some improvement has been noticeable in the demand for actual, but this has not been followed up by any marked improvement in the turnover. We are rather inclined to anticipate increased trade support during the next two or three weeks, as spinners generally have been out of the market for some time and must be carrying very small stocks. We must confess that we still fail to perceive the development of any decided factors to cause a pronounced swing in the market either way. The present level minimises prospects on the "short" side, and we think that a more attractive alternative is to watch the market closely with the idea of effecting conservative purchases should any weakness develop; at the same time, we would like to point out that should this policy be feasible the probable profits would be limited, as there is nothing in the present situation to warrant a belief in any sustained upward tendency.

Upper Contract.—Only isolated transactions have taken place in this option during the past week, and practically no alteration in the level has to be recorded. Owing to the wide discrepancies between the Liverpool and Alexandria standards, it must be confessed that this option has failed to serve its purpose. Another point that holds up business is that Pillion, which is tenderable, is not officially quoted at this side. Trade in the present option ceases in September, 1927, and it is to be trusted that its successor will be framed on lines that will attract both trade and speculative interest.

Egyptian Spot.—The increased figure of last Wednesday's Bureau Report had the customary effect of slowing down business. Prices all round, however, have kept very steady, and during the last day or two a distinct broadening in the inquiry has been noticeable. During the week less business has been done in Sakel cotton, but Uppers have been in steady request, and the Sudan Sakel cotton tendered at the end of last month has found a ready off-take. Cheap outsiders are still in favour with the majority of spinners and White Sudan cotton, at from 100 to 200 on, has again shared this class of business. Buyers, however, are very exacting and expect to get both staple and grade at cut prices. Numerous complaints are rife at the moment as to the wasty nature of the Sakel cotton which is now arriving here, and it would appear that failing any Government intervention in Egypt, the price of Sakel generally would have to narrow further this season as compared with other growths.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Albania and Her Neighbours.

It is, perhaps, inevitable that the Tirana Treaty should continue to be eagerly discussed in Balkan circles. Such discussion, we are convinced, is more likely to make for peace and understanding than for unrest, and it may, therefore, be encouraged. Elsewhere in this issue a correspondent who signs himself "Aquila" returns to the subject from the Albanian standpoint. He sees in the Agreement between Albania and Italy a conscious attempt on the part of the former to safeguard herself against her land neighbours, and he seeks to connect the Tirana Treaty with the recent insurrection in northern Albania. For this latter theory to hold good it would be necessary to prove that the negotiations between Italy and Albania had been in progress long enough to enable a revolt against Ahmed Beg Zogu to be prepared "from outside." The insurgents, it is generally understood, were certain Catholic tribesmen of Northern Albania; but the Albanians appear to be impressed by the statement that the rebels were armed with rifles of a pattern not used in Albania and that some Serbs were found amongst them. Neither of these disclosures of itself would be regarded as convincing evidence of outside connivance with the revolt by anyone acquainted with conditions on a Balkan frontier, where nationalities overlap, and the inhabitants of a village might be good Albanians, if there was a question of claiming the district for Albania, but would at once become wicked Serbs, if they crossed the frontier to challenge the Government of the day in favour of its predecessors of the day before. On the other hand, there is nothing improbable in the statement that the revolt had the support, if not the prompting, of the members of the former régime now in exile, and the comparatively easy suppression of the outbreak is in keeping with a movement originating outside the country, with only moderate backing from within.

The Policy for Yugoslavia.

According to "Aquila" the Albanian Government offered a short time ago to make a pact of friendship with Yugoslavia, and it was as a result of the rejection of the proposal that the Albanian Government turned to Italy. If this should be the case, it would probably be to the advantage of the Yugoslav Government to take the public into its confidence and state the reasons for its refusal of the Albanian offer. The pledge given by Italy in the Tirana Treaty to regard its own interests as being linked up with the perpetuation of the present régime in Albania is sufficiently anomalous to justify unwillingness on Yugoslavia's part to give the same undertaking. If nothing happens in Albania during the five years for which the Treaty holds good to put the pledge to the test, no harm will have been done to Yugoslav interests. From the point of view of the Balkan Peninsula a progressive Albania, developed commercially and, if possible, industrially, is going to be more valuable than a backward undeveloped country. It is evident that for many years to come Yugoslavia will need all the financial resources that she can command for her own development, and consequently she will have nothing to spare for the Albanians. She may, therefore, be well content that Italy should take over the task of contributing to Albania's prosperity, provided always that Italian activities are confined to legitimate economic spheres and do not carry with them political privileges. In regard to the latter Albania will be as keen as Yugoslavia not to allow the Italians to take unfair advantage of the Treaty, and on this point a community of interests has been established between Albanians and Yugoslavs, which the Belgrade Government should be able to turn to good effect. It must be careful, however, not to convey the impression that Yugoslav interest in Albania is prompted by a desire either to keep the country as a close preserve for itself or to use it as a pawn in its struggle with Italy. If the

Digitized by Google

Albanians are encouraged to regard themselves as a necessary factor in the policy of the Balkans for the Balkan peoples, they will be the more inclined to live up to the part and to avoid entanglements outside the Peninsula.

Yugoslav Politics.

After two unsuccessful attempts M. Ouzounovitch has succeeded in forming a new Cabinet, the fifth that he has led since April. The reason given for the resignation of his Ministry on December 7 was the impossibility of carrying on a Coalition Government which was continually being subjected to the attacks and denunciations of the leader of the second party in the Coalition. In resigning, therefore, M. Ouzounovitch hoped to be able to reconstruct his Cabinet without having to rely upon the support of the Raditchists. He was unable, however, to come to terms with any other group, and in the end the Government has again to include four of the followers of M. Raditch, with M. Pavle Raditch, his nephew, as Minister of Agrarian Reform. If M. Stepan Raditch could now display a measure of constructive ability that has hitherto been conspicuously absent from his political armoury, he would retire into the background for a year and give the new Cabinet time to show what effect the death of M. Pashitch is going to have on the attitude of the Radical party and on the general course of politics in Yugoslavia. His system of political guerilla warfare is demoralising to the country and can never achieve what it is perhaps charitable to suppose that M. Raditch in any lucid moments that he may give to reflexion hopes to achieve.

Qasr al Azraq.

The report that a large body of Druses has migrated to Qasr al Azraq, where it proposes to form a Druse settlement throws a curious light on the no-man's-landishness of the desert. Qasr al Azraq is in Transjordan, some seventy miles east of Amman, the capital; it was a Roman outpost in its day, and the remains of buildings still standing, if not as the Romans constructed them, show that the Crusaders, who also established themselves there, made good use of Roman stonework. In the freshwater lakes that make of it a notable oasis in this region are still to be found the descendants of the carp with which the Romans must have stocked them. Until the immigration of Druses from the Jabal Druse, the number of Druses in Transjordan was comparatively small. It is obvious, therefore, that what may amount to the transfer of the Jabal Druse Government, with the remnants of its military following, to Transjordan constitutes a factor in the political affairs of this part of the world. No time, therefore, should be lost in dealing with the new situation created, for which purpose an agreement should be reached between the British, French, Transjordan, and Druse authorities.

Greece and Great Britain.

The speech made by Sir Percy Loraine, the new British Minister in Athens, on the occasion of the presentation of his Letters of Credence to the President of the Greek Republic went some way beyond the narrow limits usually prescribed for these formalities. It is unlikely that the extreme cordiality of his remarks will be lost on the Greeks, who in common with the other peoples of the Near East are inclined to watch eagerly for straws that are supposed to indicate the way in which the diplomatic wind is blowing. Sir Percy Loraine reached heights of imagery and poetry which suggest that oratory is not yet a lost art in British diplomacy. After a reference to the Greece of Pericles and Alexander—a theme that never fails to evoke a thrill of pride in the modern Greek—and to the spirit of enlightened courage "in which their descendants have faced a task, scarcely paralleled in its magnitude and complexity, of rebuilding upon new foundations the national life of the Hellenic Nation," Sir Percy Loraine continued: "These ties of deep-flowing sentiment, which have placed their glowing imprint on the history of civilization and the more recent brotherhood in arms, bind together the two peoples in a communion which can never permanently be obscured; and it is along the paths of the sea and by the commerce of the seas, with which the national life and prosperity of these two sea-faring nations are so indissolubly linked, that this communion is maintained and ever fortified." The significance of these fine periods should lie as much in the future as in the past. Great Britain felt constrained to withdraw her representative from Athens at the time of the execution of the five Ministers and the Greek Commander-in-Chief in Asia Minor, in 1922, and the course of political events in Greece since that date has prevented the re-establishment of more than merely formal relations between the two Governments. Sir Percy Loraine's remarks carry with them the suggestion that the dead past should be allowed to bury its dead, and that, if Greece is prepared to consign all the unhappy events of the recent years into the limbo of oblivion she will find Great Britain anxious to help her to do more than recover lost ground by the opening up of an era which will do justice to the geographical position and the genius of Greece.

A BALKAN YEAR—(*Concluded from page* 749.)

settling the protracted dispute over the Salonika Free Zone and the Salonika-Ghevgeli Railway. General Kondylis assumed the reins of office, and constitutionalism was finally restored when, after elections which gave no party a majority, M. Zaimis formed a Coalition Ministry of the leaders of the chief parties.

From January to November Albania was successful in avoiding the limelight in the steady pursuit of stability and material progress; but in the latter month she provided a star turn for the Balkans through an engagement with an Italian impresario. Her treaty with Italy served to bring to a head the question of Italian designs on the Balkans, as there was a tendency at first to read into the terms of the agreement definite provision for an Italian foothold on the Peninsula. Most of the misgiving has been cleared away by the establishment of the fact that Italy has no powers to take action unless invited to do so by Albania. The lesson, however, remains for the Balkan States, that unless and until they sink their own differences and are able to present a united front, their territory is likely to be an international hunting ground for those in search of support for expansion schemes, whether economic or political.

THURSDAY, DECEMBER 30, 1926.

A BALKAN YEAR.

Politically the year that comes to a close this week has been a strenuous one for all the States of South-Eastern Europe. With the exception of Albania, where the President of the Republic is his own Prime Minister, no country ends the year with the same Head of the Government as it had at the beginnning. The earliest change came in Bulgaria, for on January 2 Dr. Tsankoff resigned and was succeeded two days later by M. Liaptcheff. Although the same parliamentary party—the Democratic Entente—remained in power, the new Prime Minister stood for a different policy and the change meant much to Bulgaria. Dr. Tsankoff had not been able to throw off the feeling that the menace of Agraro-Communist chaos from which he had been called upon to rescue the country in the first instance remained as real and as imminent as ever. M. Liaptcheff embarked at once on a policy of reconciliation, and a general amnesty was proclaimed, which affected some six thousand people. Few of the exiles, except the more prominent leaders and extreme Communists, failed to take advantage of the amnesty. The consequent improvement in the internal situation impressed the League of Nations, with the result that the Refugee Loan for which Bulgaria had made the first tentative overtures eighteen months previously was agreed to on June 11. Last week the loan for £3,300,000 was floated with marked success in London and other centres, but the work of settling refugees on the land had been begun on a systematic plan much earlier with the help of an advance from the Bank of England. In regard to her relations to her neighbours Bulgaria continued to suffer the ups and downs incidental to existence in the Balkans. The favour with which she was being regarded in League circles roused misgivings in Yugoslavia, Roumania and Greece, lest the proceeds of the loan should in some way be deflected to the encouragement of *komitaji* activities. Reports of frontier incidents gained currency, and the three countries were preparing a stiff Note to Bulgaria when the representatives of Great Britain, France and Italy counselled moderation in Belgrade. The actual Note presented to the Bulgarian Government on August 11 was comparatively mild in tone. Acting on similar advice, the latter sent a correct and dispassionate reply, and the incident passed without untoward results. Later in the year a personal visit to Belgrade of M. Buroff, Bulgarian Foreign Minister, and the stimulus that his appointment as President of the November session of the League of Nations' Assembly gave to the peaceful policy with which M. Nintchitch, Yugoslavia's Foreign Minister, had identified himself, led to an improvement in Bulgaro-Yugoslav relations.

For Yugoslavia the year 1926 will be notable for having brought to an end the remarkable career of a statesman whose name will always be linked with one of the most striking eras in the history of the Southern Slavs. On April 8 M. Pashitch resigned his office of Prime Minister, for the last time, as the event proved. His wonderful hold on the Radical Party was being challenged, his health was failing, and he had been seriously embarrassed by charges of corruption brought against his son. The coalition with the Croat Peasant Party under M. Raditch, had been sound enough in principle, but very troublesome in practice. M. Pashitch found himself unequal to the task of making it a success and left it to his lieutenant, M. Ouzounovitch, to try his hand. Within a short space of time the latter had reconstructed his Cabinet three times; but before the end of the year the attacks of M. Raditch on the Government, of which his own followers were members, brought about another crisis that has now been only temporarily liquidated. The Radicals, although the strongest party in the Skupshtina, cannot form a majority without the support of others, but do not see their way to concede the terms on which that support can be had. In the realm of foreign policy also the year has not been conspicuous for plain sailing. During February M. Nintchitch, Foreign Minister, paid a visit to Rome, but he was unable or unwilling to give a more definite character to the 1924 Pact of Friendship with Italy. Conditions in Yugoslavia, where Croats and Slovenes are inclined to lag behind the Serbian desire for a closer understanding with Italy, prevented the Government from committing itself to an entirely Italian orientation and M. Nintchitch's efforts to bring about a Pact between Italy, France and Yugoslavia met with no success. The ratification of the Nettuno Conventions in June, although a long distance from a political alliance, testified to the correctness of Italo-Yugoslav relations. The delicate state of these, however, was sharply emphasised at the end of the year, when the news of the Italo-Albanian Treaty was received with pained surprise and some disgust in Yugoslavia.

The sensitive waters of Roumanian politics were also troubled by a change of Government. In March the Cabinet of M. Bratianu resigned, having reached the end of its constitutional period. King Ferdinand accepted the outgoing Prime Minister's recommendation, and, in spite of the fact that General Averescu had an exiguous following in Parliament and two Opposition parties had formally united in order to qualify for the succession to the Liberals, called upon the General to form a Ministry. The elections that followed shortly afterwards returned General Averescu to power with a substantial majority. The new Government lost no time in showing that it had no intention of being tarred with the anti-foreign brush with which MM. Ion and Vintila Bratianu contrived to smear most of their legislation, and its short term of office has already done much to rehabilitate Roumania in the eyes of foreign capital. Treaties with France (in June) and Italy (in September) showed that the Averescu Government had succumbed to the prevailing craze for paper reinsurance; but the latter Treaty was not as popular as it might have been, if General Averescu on the occasion of his visit to Rome had been able to persuade Signor Mussolini to ratify the Allied agreement recognising the *status quo* in Bessarabia. A shadow hanging over Roumania during the year has been formed by the circumstances attending the renunciation by Prince Carol of his rights of succession. How troubled the people were by it was shown by the fact that King Ferdinand, whose health at the time seemed so precarious that Queen Marie had to be recalled from her tour in the United States (which American journalistic licence had at one time threatened to mar by unjustly identifying it with "storied cairn or animated bust") had to appeal to the nation to respect the decisions taken by him in his interests. As the year closes the worst fears entertained of the King's health have happily been belied. A preliminary operation has been so far successful that there is hope that the King will be able to undergo and to benefit by a more serious one.

For Greece the year 1926 has proved more hectic than for any of her neighbours. On January 4 General Pangalos proclaimed himself Dictator, and for the next seven months the Greeks were given a valuable object lesson in the way in which good intentions can be spoiled by faulty methods. General Pangalos tried hard to cure Greece of galloping political consumption: but when he had interned the politicians his statecraft seemed to have exhausted itself. He was overthrown on August 22, five days after his Government had achieved a notable success in signing a treaty of friendship with Yugoslavia and

(Continued on page 748.)

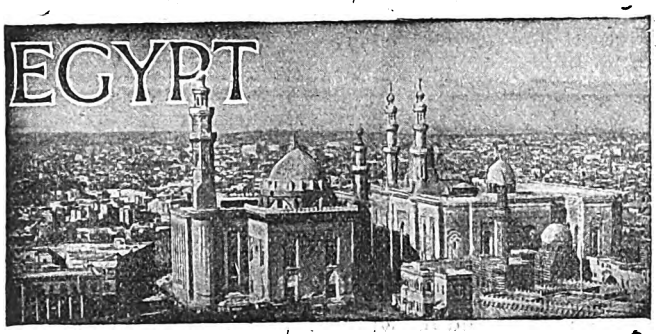
The Near and Middle East*

From Our Own Correspondents.



Cairo, December 17.

The International Navigation Congress.

The XIVth International Navigation Congress, which was inaugurated on December 6 by King Fuad at the Royal Opera House, came to an end this week with a grand banquet at Shepheard's Hotel, over which Ziwar Pasha, the ex-Premier, presided in his capacity of President of the Congress. Everything has gone wonderfully smoothly—both the business arrangements for the work of the Congress and the comfort and entertaining of the foreign delegates and associates, who numbered nearly two hundred. While all Government Departments as well as business enterprises concerned co-operated in a most satisfactory manner to produce this result, the lion's share of the credit undoubtedly goes to His Excellency Yussef Aslan Cattaui Pasha, the eminent Jewish banker and ex-Minister of Finance and Communications, to whose indefatigable efforts, urbanity and hospitality the heads of all the delegations unanimously paid tribute in their speeches at the closing banquet. It is indeed rare that a family produces in the same generation two such born-organisers and men of imagination as Yussef Pasha and his brother, the late Adolphe Bey, who was responsible for the brilliant success of the Geographical Congress which took place in the spring of 1925, and one can only hope that the former will long be spared to act as Secretary-General for other congresses which will certainly be held in Cairo in the near future.

A propos of the speeches of the heads of the delegations at Shepheard's Hotel, that of the Japanese representative was remarkable for the generous terms in which he admitted his country's indebtedness to the Western nations for the assistance they had given his people in attaining their present state of development. There was no mistaking the sincerity of this declaration; one could not help contrasting this ready recognition of the part played by Europe in the economic and intellectual progress of this great Far Eastern nation with the refusal of large numbers of instructed Egyptians to recognise the great debt their country owes in the same matter to Europe in general and Great Britain in particular.

Cotton.

Cotton has again this week been uppermost in the minds of the Egyptians, and Egypt has just emerged from a critical situation—I will not go so far as to say a ministerial crisis—in the matter of the assistance which the Egyptian Government should give to the local cotton industry. The actual question which gave rise to the critical situation was whether or not the Government should enter the Alexandria cotton market as a buyer of contracts. This particular point has been a subject of discussion for some time.

When the bottom fell out of the cotton market at the beginning of the autumn there was, as usual, a cry for Government intervention. At that time the demand was that, as in previous years, the Government should buy cotton. This Adly Pasha and his colleagues refused to do. In the first place they had already in 1925-26 purchased half a million kantars, which still remained on their hands at a heavy loss. Secondly, they were of opinion that, while there was no doubt a good deal of detrimental speculation on the Alexandria Bourses, the real cause of the slump in Egyptian cotton prices lay outside Egypt, and no action on the part of the Egyptian Government, such as it was being pressed to take, could assist the situation. Recognising, however, that something might be done to assist the growers who might still be holding their crop, they decided to allocate £E4,000,000 from the reserve to be used in advances to the cotton growers. (Of this so far £E1,000,000 has been used.)

This did not, however, satisfy the landowners, who have throughout been the chief movers in the demand for Government intervention, no doubt because they wanted to safeguard their rents, and during the past month the cry for Government intervention on the spot market became changed to one for Government purchase of contracts. The Cabinet remained adamant. All manner of influences were brought to bear on the Government and on Parliament and when one analyses them one can but come to the conclusion that the increasing pressure has been in great part due to speculators, who hoped that Government intervention on the contract market would offer them relief from the precarious position in which their manœuvres had landed them.

A proposal on the subject was submitted to the Chamber by one of the deputies. As the time for the debate approached feeling grew in intensity and on Monday and Wednesday, when the question was discussed in secret sessions, there was no mistaking the determination of the House that the Government should enter the cotton contract market. Adly Pasha and his colleagues recognised that persistence in their opposition could be productive of no good result and, putting on record their disapproval of the principle of Government purchase of contracts, they laid on the House the full responsibility for the decision in this matter. The Chamber, with but a few dissentients, decided to accept the proposal, but provided what may be a saving clause by the institution of a committee, on which each House and the Government would be represented, for the carrying out of the operation. There the matter remains for the present, and it will be interesting to see, now that a decision has been taken, the extent to which operations will be carried out and the effect they will have on Egyptian cotton prices. Leading financial opinion does not hesitate to condemn the Government purchase of cotton contracts as unsound both in principle and as regards the additional call which it may entail on the resources of the State, already heavily committed in this connexion.

IRAQ.

Baghdad, December 14.

The New Government.

Sir Abdul Muhsin as Saadun has resigned his position as Chairman of the Progressive Party, in order to main-

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Digitized by Google

tain the strict impartiality which is required of him in his office as President of the Chamber of Deputies. His place in the party has been taken by Jaafar Pasha al Askari, the Prime Minister.

The first item on the programme of policy adopted by the new Government is the completion of the amendment of the Anglo-Iraq Treaty, begun by the last Government. The Prime Minister, in a speech to the Progressive Party, made very cordial reference to Great Britain, remarking that Iraq had every reason to congratulate herself and to rejoice at having achieved an alliance with the greatest Power in the world, an alliance to obtain which many other countries were prepared to make the greatest sacrifices. He personally had "no desire to adopt an impracticable policy, or ask for the impossible." On the reading in the House of the Government's programme, a vote of confidence was passed unanimously.

The High Commissioner.

Sir Henry Dobbs returned to Baghdad by air on December 1, after an absence of five weeks. At an audience with the King on the day of his arrival, he reported the results of his visits to Geneva, Angora, and Syria. The Turkish Ministers, he said, had shown every wish to cultivate friendly relations with Iraq, and in Syria he had found the French authorities especially eager to work in harmony with the Iraq Government, and to promote the development of commerce and communications between the two countries.

General.

Last year's floods so seriously affected the Royal Palace that it has been found necessary to repair the buildings of the Technical, in order to make it suitable for a temporary residence for King Faisal until a new and permanent palace can be built.

The average rainfall in Baghdad over a period of 29 years was, according to a publication of the Government of Iraq, 6.84 inches. This year no fewer than 6.9 inches have fallen in Baghdad since November 7. The results of this exceptionally wet weather have been serious in several parts of the city, where a number of houses have collapsed and many more have been pronounced unsafe. The liquid mud in many of the streets is more than a foot deep. The cold fine weather which has now set in will, according to Arab wiseacres, hold for forty days.

The Rev. A. B. Royds, M.A., who has been appointed by the Archbishop of Canterbury to the Civil Chaplaincy of Baghdad, is due to arrive by Overland convoy this week. He held for several years the appointment of head of the Cambridge University Mission in Bermondsey.

HIJAZ.

Jidda, December 9.

The Pilgrimage.

The pilgrim season of 1927—the ceremonies of the Great Pilgrimage take place about the middle of next June—may be regarded as having begun yesterday with the arrival of the first batch of Javanese pilgrims, some 80 all told, in the "Blue Funnel" steamship Priam. One swallow does not make a summer, but hopes are high at Jidda that the number of pilgrims visiting the Hijaz during the coming half-year will be legion.

Mr. Borrodaile's Departure.

But "this first summer month that brings the rose shall take Jamshyd and Kaikubad away," and the small British community of Jidda has to mourn the departure of its doyen, Mr. James Borrodaile, who since 1919 has been pro-consul and archivist at the British Agency—the *fidus Achates* of a long line of British Consuls. The sad occasion was duly celebrated with customary hilarity at a gathering in force of the thirteen representatives of the Nordic races present in the town.

Negotiations with Ibn Saoud.

The British Consul and Mr. George Antonius of the Palestine Administration are still in conclave with the King in the neighbourhood of Madina, where negotiations appear to be proceeding on entirely satisfactory lines. There is apparently good reason to believe that the rendition of the Aqaba-Maan province to the Hijaz has now commended itself to His Majesty's Government as the obvious solution of an *impasse* created by the move in July, 1925. And the settlement of this question will place the relations of the British Government, as Mandatary for Palestine and Iraq, with the Wahhabi King-Sultan on the firm foundations of friendship and mutual trust. Certain ambiguous passages in the treaty of 1915 signed by Ibn Saoud and Sir Percy Cox—it will be remembered that certain items in that treaty have created doubts on the reality of Ibn Saoud's political independence—are also likely to be rectified in a manner altogether satisfactory to Arabia itself and the Muslim world in general. By a year of steady progress—notably in the establishment of complete security everywhere in the Hijaz—and of careful administration Ibn Saoud has unquestionably established his right to existence as an independent political entity. The present negotiations will give treaty recognition of that right and leave the road clear for the Wahhabi King to develop his country on the lines best calculated to give it stability and prosperity. January 8 will be the first anniversary of his acclamation as King at Mecca, but the official anniversary of that day according to the lunar calendar will fall on or about Christmas Day. The King will not be able to grace the occasion with his presence as he will by then be on his way to Riyadh.

Ibn Saoud's Budget.

The first year's budget shows a revenue of approximately £500,000, with expenditure well within that figure. Some slight progress has been made in educational matters and the Royal Free School, founded by Ibn Saoud to celebrate his accession to the Throne, numbers some 250 boys, a considerable number of whom receive elementary instruction in English.

The Amir Faisal's Return.

The Amir Faisal returned to Mecca from Madina on December 6, and was accorded an enthusiastic reception on the resumption of his duties as Viceroy of Mecca on his return from his European tour. His younger brother, the Amir Muhammad, will represent his father at Madina, when the latter goes to Najd.

ALBANIA.

Tirana, December 10.

The Treaty with Italy.

Appended is a translation of the Treaty which has just been signed between Albania and Italy. It has been drawn up in two languages: Italian and Albanian.

PACT OF FRIENDSHIP AND SECURITY BETWEEN ALBANIA AND ITALY.

Art. 1. Albania and Italy recognise that any disturbance whatsoever directed against the *status quo*, political, juridical and territorial of Albania, is contrary to their reciprocal interests.

Art. 2. For the protection of the above-mentioned interests the High Contracting Parties pledge themselves to lend their mutual support and their cordial co-operation; they pledge themselves equally not to conclude with other Powers political and military agreements to the prejudice of the interests of the other party, as defined in the present Pact.

Art. 3. The High Contracting Parties pledge themselves to submit to a special procedure of conciliation or arbitration matters of difference that may arise, which it shall not have been possible to adjust by ordinary diplomatic procedure. The form of this procedure of peaceful regulation shall be the subject of a special convention which shall be concluded within a short time.

Art. 4. The present Pact is for a period of five years and can be denounced or renewed one year before its expiration.

Art. 5. The present Pact will be ratified and subsequently registered with the League of Nations. Ratifications will be exchanged in Rome.

Done at Tirana, November 27, 1926.

After the Treaty.

Two days after the signature of the Treaty was made public, the Yugoslav Minister, M. Bogylub Yevtitch, left precipitately for Belgrade, by way of Montenegro. He took this route because the bad weather had made the steamer service late. This brusque departure, the long and laborious conversations which the Minister had had beforehand with President Ahmed Zogu, and the fall of the Yugoslav Cabinet, especially the resignation of Dr. Nintchitch, produced a notable impression in Albania, where it is thought that something of great moment must have been accomplished, and a great step taken.

The Treaty itself was presented to the Chamber of Deputies on December 8; it was received without any protest and returned to the Foreign Affairs and Juridical Commissions. On December 9 it was ratified.

Five deputies refrained from voting. It is said that twenty deputies intended to vote against the Treaty. This rumour got about two days before the Treaty was presented to Parliament; but it would appear that owing to Government explanations nobody actually raised objections.

The only question that agitated Governmental circles was whether Italy had reserved to herself the right to intervene in Albania at all times and on all occasions, or whether this right was kept for Albania herself. On the actual day of voting in the Albanian Assembly, the Minister for Foreign Affairs communicated to the Chamber the text of an Italian declaration which will be annexed to the Treaty, and according to which Italy will lend her help only when the Tirana Government expressly asks for it.

Here is the text of a letter written by Baron Aloisi to Hussein Bey Vrioni, Albanian Foreign Minister.

"You have asked me to explain, for the benefit of certain Albanians, the exact interpretation of the Italian Government of certain phrases contained in the Pact of Friendship and Security (which is essentially one of peace) signed by us on November 27 last. You have particularly asked me whether the Italian Government, like the Albanian Government, believed that the phrase 'i trattate di cui ambedue sono firmatari' referred only to treaties concluded and published since the admission of Albania into the League of Nations. In conformity with the verbal assurances which I have already given to you, I herewith confirm that such is also the thought of the Government of Rome.

"Next you have drawn my attention to the phrase contained in the second part of the first sentence of Article 2 of the text: 'il loro mutuo appogio e la loro collaborazione cordiale.' This phrase in the opinion of the Royal Government can give rise to no doubt at all. The mutual support and collaboration cannot be interpreted otherwise than as a collaboration resulting from propositions made by one party and freely accepted by the other. Moreover, it is obvious that collaboration can thus be manifested only if one of the two parties asks for it.

"I have the honour to renew my assurances that, according to instructions from my Government, I am now at the entire disposal of the Albanian Government to begin negotiations on the establishment of special procedure of conciliation and of arbitration as provided in Article 3 of our Pact of Friendship and Security of November 27 last.

"These explanations confirm the loyal intention of the two contracting Governments; that is why I flatter myself, Excellency, that they will show in still more clarity the good faith and the disinterested spirit with which the Royal Government has welcomed all the requests for explanation which the Albanian Government has expressed on the conclusion of this Pact."

In spite of the apparent calm, the Government has thought it prudent to send troops (Irregulars, that is, mountaineers from Dibra) to Koritsa, Saranta, and Himara.

A Little History.

Ever since 1912, that is to say, ever since the day of the creation of Albania, Italy has sought to assure herself of a strong position in Albania. In 1915, in the Treaty which has been called "the secret Treaty of London," Italy planned the partitioning of Albania, reserving to herself a part of the centre of the country, with Valona as base. The Armistice of 1918 came with Italy almost mistress of Albania, of which the greater part was occupied by her troops. The Peace Conference was in a hesitating mood, when, in January, 1920, Albania, at the Congress of Lushnia, postulated the bases of her territorial integrity in the limits which were assigned to her in 1912, and of her political independence. Six months afterwards, there were the struggles for Valona; but soon Italy recognised the rights of Albania, and evacuated the country. Nevertheless, Italy has still sought to secure a position on the opposite side of the Adriatic. Thus in 1922 she claimed before the Conference of Ambassadors to have preponderating economic and political rights in Albania, a claim not admitted by the other Powers at the Conference. Shortly afterwards the Government of Rome tried to secure the consent of the Council of the League of Nations to recognise its right to intervene in Albanian affairs, in case of serious trouble—Italy wishing to be given a kind of mandate, acting on behalf of the other Great Powers when their interests were threatened, and, in appearance, to safeguard the independence of the little State.

Since that time the Consulta has always kept a vigilant eye on Albania; I have communicated the *démarche* which the Government of Signor Mussolini made to Tirana last July. It was thought then that these *démarches* had been abruptly broken off, but the Treaty just signed proves that these pourparlers were really a preliminary sounding.

The Future.

As I wrote in my last letter, there are no newspapers, properly speaking, in Albania, so that little idea can be obtained of what is called public opinion. There is only the *Shgypniya*, the Government organ, published at Tirana, which, in its editorial of December 8, praises the Italo-Albanian Treaty. In Governmental circles one is assured that this Treaty will serve to give a character of loyalty and frankness to the relations existing between

Digitized by Google

the two countries, without making relations with other States any more difficult, the Pact that has just been signed having nothing contrary to the interests of any other country.

The Pact Ratified.

This evening, at ten o'clock, the Treaty was presented as a matter of great urgency to the Senate, where it was voted immediately. The Minister for Foreign Affairs, Hussein Vrioni, who was there to defend the Treaty, explained that it contained nothing of a hostile nature towards anybody, and that Albania proposes to ask Yugoslavia to sign a similar Pact.

The Treaty will now be sent to Geneva, to be registered with the League of Nations, in conformity with Article 5.

GREECE.

Athens, December 14.

Rain.

The long-protracted drought broke on November 27, and rain fell steadily for nearly a fortnight. Latterly the wind shifted to the north, and snow is still lying on the summits of Parnes, Cithaeron, and Geraneia.

The Government.

The Œcumenical Government continues to present a united front to the world; behind the scenes, some highly thorny questions are being discussed, of which the problem of making government safe against military interference requires the most delicate handling. The difficulty of disposing of General Othonaios is complicated by the fact that, by a decree of the late dictator, the power to place a general on the retired list was taken out of the hands of the Minister of War. On the radical solution of the whole problem the future of the Coalition must depend, and while they will have the support of the nation as a whole in their efforts to solve it, it is clear that the Military League will not submit to having its fangs drawn without a struggle. Such experiments in political dentistry can perhaps only be carried out with the aid of anæsthetics.

Political Problems.

The now hoary questions of the revision of the Constitution and the composition of the Senate are emerging once more. Any settlement, even a provisional one, would be better than long-drawn-out discussions, which exhaust the energy of politicians and the patience of the public. Such discussions have, however, a fatal fascination for Greek politicians, and so engrossed do they become in them that urgent practical problems tend to be shelved. Agreement, too, within a Cabinet consisting of one party is difficult enough; how it will be reached when all the members belong to different parties time alone will show. Under pressure of public opinion and faced by the necessity of securing the further instalment of the refugee loan, the Government will hold together for a time, and even when it disintegrates, its tenure of power will always be remembered as a notable attempt to merge party differences and bitterness for the common welfare. The overwhelming vote of confidence obtained on December 9 is at any rate a good augury for the future.

General Kondylis.

The man who has made this temporary reconciliation possible—General Kondylis—has withdrawn into the background, and with his retirement closes an interesting page in Greek history. He deserves to be remembered as the man who fulfilled his programme, even to the point of personal effacement and that of his party. Gratitude he can hardly expect; but it is well that he should be at the disposal of the country, when the next crisis arises. It will not be his fault, if his services are required again before long. His proclamation to the Hellenic people of December 4 is an unadorned record of work accomplished, and a model of what such things should be.

The Refugees.

Reference has frequently been made in these letters to the immense work which the settlement of a million and a half refugees has involved. For those who wish to gain some idea of this work, but have not time to study it in detail, a glance at the map that accompanies the official report, "L'Etablissement des Réfugiés," recently published at Geneva in French and English, will be sufficient. The fruits of Turkish folly are an unspeakable gain for Greece, and the lost tribes of Hellenism have found Zion at last.

Incidentally, one beneficial result of the introduction of refugees has been that large areas of Macedonia, owing to intensive culture, have been turned from malarious swamps into healthy regions. Many difficult problems still await solution, of which not the least is how best to absorb the unskilled urban worker. This is to some extent being met by the employment created by the drainage works of the Vardar, now well advanced, but much time must elapse before this section of the refugee population can find permanent occupation. In view of the many difficulties yet to be faced, the retirement of Sir John Campbell from the Refugee Settlement Commission is much rgretted. Not a little of its success has been due to his able administration.

ROUMANIA.

Bucharest, December 23.

Parliamentary Activity.

After more than a fortnight's general discussion of the Message from the Throne Parliament appears at last to have begun to get to business, and several important measures have been laid before the House, including the Budget estimates for the next financial year and a Bill for the institution of Free Zones in the ports of Galatz, Braila, Constantza and Giurgu.

Free Zones Bill.

This Bill has in view the installation of bonded warehouses in the free zones, where goods can be landed and, if necessary, re-exported, without coming in any way under the Customs' régime. It is clear that such an institution would be of the greatest assistance to the export and import trades, and one of its advantages would be to eliminate the difficulties now often encountered by merchants in connexion with the re-export of goods found unsaleable in this country for whatever reason. This Bill was first brought forward by the Liberal Government, but was returned to a special committee for revision and it has been left to the present Government to pass it into law.

Compact between General Averescu and M. Maniu ?

The Press gives a good deal of space to discussions of the probability of an early fusion of the Transylvanian Nationalist Party of M. Maniu with the Government Party of General Averescu, or at all events of an agreement for collaboration between these two parties. Nothing definite is known, however, and the Government Party only admits that political discussions have taken place between the head of the Government and the Leader of the Nationalist Party. If such a fusion were effected a number of able men would be added to the Government benches and a new Cabinet would have to be formed. It would also have the effect of greatly strengthening the forces of the present Government.

State Budget for 1927.

The Minister of Finance has this week laid his Budget estimates for 1927 before the Council of Ministers. The total estimates have again increased by several milliards: viz., from over 28,000 millions for 1926 to over 33,000 millions for 1927. Moreover, the higher figure for next year does not include the Budget of the Postal, Telegraph, and Telephone Service, which has just been given an autonomous position with separate budget, as was done for the railways last year. Part of this increase is due to the general rise in the cost of living, and part of it is required to cover certain long outstanding foreign obligations, and Roumanian War Debts.

Railways.

With regard to the re-administration of the railways, the Liberal Government in power last year appointed a Board of Administration (composed chiefly, of course, of members of the Liberal Party) under which the "Direction Générale des Chemins de Fer" acted as an executive body. This arrangement, which left the Administration of the railways too much under Liberal influence, has not been to the liking of the present Government and a proposal is now on foot to create an Under-Secretary of State for Railways, which will again bring this important administration more directly under the influence of the Government in power. This, of course, re-introduces the political element and rather modifies the idea of autonomy, which was supposed to be the basis of the new arrangement, and it has raised a great controversy in the Press.

From the practical point of view, however, the main point of interest in regard to the railways should be to find some means of putting them into condition to deal with the ever-increasing traffic, and of obtaining funds sufficient to undertake the much-needed repairs of the permanent way, embankments, bridges, and so on.

The Post Office.

The Post Office cannot be considered an efficient service in Roumania, though it must be admitted that conditions have considerably improved during the last two years, and fewer letters are lost in the post. But there are still some very black spots on the Roumanian map in this regard. It will be interesting to see whether with its autonomous administration a further improvement will be effected.

THE YUGOSLAV CABINET.

The new Yugoslav Cabinet formed under M. Ouzounovitch on December 24 is constituted as follows:—(Members of the Radical Party). *M. Ouzounovitch, Prime Minister; M. Ninko Peritch, Foreign Affairs; *M. Boja Maximovitch, Interior; *Dr. M. Serghkitch, Justice; *M. Misha Trifounovitch, Education; *Dr. Milorad Vuitchitch, Public Worship; *M. Milan Simonovitch, Mines and Forests; *M. Vassa Yovanovitch, Unification of Laws. (Members of the Croat Peasant Party.) M. Paul Raditch, Agrarian Reform; *M. Benjamin Shuperina, Posts and Telegraphs; *Dr. Ivan Krayatch, Commerce. (Ministers not in the Skupshtina.) General Hajitch (no party), War; General Milosavlyevitch (no party), Transport; M. Bogdan Markovitch (Radical), Finance; M. August Koshutitch (Croat Peasant),, Public Works.

*Members of the fourth Ouzounovitch Cabinet, which resigned on December 7.

The portfolios of Public Welfare and Agriculture, which have been offered to the Slovene Clerical Party, are temporarily held by the Ministers of Mines and Forests and of Unification of Laws respectively.

THE PERSIAN RATE OF EXCHANGE.

We much regret that, owing to a printer's error, the rate of exchange in Persia should have been described in the last letter from our Teheran Correspondent (in our issue of November 25) as being 45, the highest for several years. The figure should, of course, have been 54.

ALBANIA, YUGOSLAVIA, AND ITALY.

BY "AQUILA."

[This article is commented upon in our "Notes of the Week."—ED.]

Considerable attention has been directed towards the Adriatic, and towards Albania in particular, as a result of the recent Treaty between Italy and Albania. Many questions are troubling political thinkers. What is the ultimate aim of Italy in the Balkans? Is more to be read into the Treaty than the wording implies? Why has the Albanian Government reversed its previous policy?

It is interesting and instructive to note the manner in which the news of the Treaty was received in the capitals primarily interested. In Belgrade the Foreign Minister, M. Nintchitch, resigned; and the Government fell. The last thing that the Yugoslav Government desired was an Albanian *rapprochement* with Italy. In Athens the Government, already sufficiently occupied with its own somewhat delicate situation, was silent, but the Press launched a vitriolic campaign against Albania. From Rome little transpired; but a quiet purr of satisfaction could be detected. It is from Paris that the greatest outcry is heard. Why? One wonders. French interests in the Adriatic are not immediately obvious. Why should this Treaty of friendship and mutual co-operation, based on the spirit of Locarno, touch the Frenchman on the raw?

It may be of advantage to study the matter for the moment from the Albanian standpoint.

Until the return to power in December, 1924, of Ahmed Bey Zogu, now President of the Republic, the Government of Albania had always been unstable; and, indeed, the people had become accustomed to a revolution on an average every nine months.

This continuous unrest was due in part to the novelty of a feeling of independence; in part to the distrust which the three creeds—Muslim, Catholic, and Orthodox—bore to each other; and in part, but to a much greater degree, to outside influences.

Intrigue was rife and each of the neighbouring Powers of Yugoslavia, Italy, and Greece was striving to prevent the other from obtaining a predominating influence.

As a result, little economic or moral progress was made from the backward state in which Albania had been left by Turkey. With the advent of Ahmed Bey Zogu an unexampled period of nearly two years of internal peace was secured, and a considerable advance was made towards stabilising the Government. The programme for the reorganisation of the Administration of the Interior, laid down by the British Adviser, Lieut.-Colonel W. F. Stirling, was put into operation. The Gendarmerie was reorganised under the Ministry of Interior, and some nine British officers were brought out as Inspectors in that Force. Quite recently, at the invitation of the Albanian Government, Major-General Sir Jocelyn Percy accepted the post of Inspector-General of the Gendarmerie. A National Bank was formed and a loan floated in Italy to be expended on public works and the development of communications.

Albania appeared, in short, to be on the road to prosperity when a fresh revolution broke out unexpectedly in the North. The movement was planned by the exiled members of the Revolutionary Government of 1924. Undeniably assisted both in men, money, and material from Serbian sources, prepared on and launched from Yugoslav territory, this was the reply of Yugoslavia to the offer made by the Albanian Government to conclude with her a Pact of friendship.

In view of the situation can any surprise be felt at the sudden swing of Albanian sympathies towards Italy and at the rapid conclusion of a Treaty of mutual co-operation? What grounds for complaint have the Yugoslav Government, which refused a similar Treaty?

PERSONAL AND GENERAL

TO-DAY

December 30, 1926 (New Style).
December 17, 1926 (Old Style).
Jomada II. 24, 1345 A.H., of the Muslim Calendar.
Tebet 25, 5687, of the Jewish Calendar.

Sir Henry and Lady Bax-Ironside will return to London next week from Paris.

Lady Herbert is sailing from Marseilles for India in the s.s. Razmak to-morrow (Friday).

Sir Mancherji Bhownaggree has left for Mentone, and will not return until the early spring.

Lord Sinha, who is on the Continent, will leave shortly for a three months' visit to India.

Major-General Sir Alfred and Lady Knox left London on December 23 by the P. and O. Bombay express to join the Naldera at Marseilles.

Sir Walter Lawrence and family left on December 22 for Mürren, where they will stay till January 14.

Mrs. Eddy Campbell sailed last week in the s.s. Naldera to join Captain Campbell for the winter at Pachmari, C.P., India.

Earl Winterton, M.P., and Countess Winterton will return to London about the middle of February from India.

The High Commissioner for India and Lady Chatterjee have been spending the Christmas holidays in Italy.

Sir Gordon and Lady Cunard left England last week for Egypt in the Kaiser-i-Hind.

The Hon. Lady Salmond, the wife of Air Marshal Sir John Salmond, gave birth to a son at Chestnut House, Uxbridge, on December 20.

Surgeon-Lieutenant-Colonel Arthur Tomes, I.M.S. (retired), of Lynwood, Exmouth, who died on January 2, aged 75, left estate of the gross value of £22,036, with net personalty £21,931.

Sir Montague Barlow is sailing this week in the Mulbera for Beira for a tour in East and Central Africa. He hopes to return via the Nile and Khartoum, arriving in London about Easter.

The King has approved the appointment of Mr. Leonard Wilfred James Costello to be a Puisne Judge of the High Court of Judicature at Calcutta in the vacancy created by the promotion of Sir George Rankin to be Chief Justice.

H.E. Abdol-Ali Khan Sadri (Sadighos-Saltaneh), the newly appointed Persian Minister to the Court of St. James's, who arrived in London recently, paid a visit to the Foreign Office on December 17.

Air-Marshal Sir John Salmond, Air Officer Commanding-in-Chief, has been appointed chairman of the executive committee of the Royal Air Force display for 1927, which will take place at Hendon on July 2.

NEWS IN BRIEF.

The Turkish Government has approved the proposal for establishing a train-ferry across the Bosphorus which will make it possible for the Simplon Orient express, which at present stops at Constantinople, to run through from Paris to Angora.

The United States Senate on December 22 ordered an inquiry into the relationship between the Chester Oil Concessions in Mosul and the State Department's part in the Lausanne Conference which resulted in the general recognition of the Turkish Republic.

Advices from Tirana (Albania) state that as a result of the seismic disturbances in the Sciacca mountain range a new volcano has appeared there and has been in eruption since December 22. The waters of a neighbouring lake are reported to be boiling.

Sir Percy Loraine, the new British Minister, presented his credentials to the President of the Greek Republic in Athens on December 22. Special importance attaches to this because Sir Milne Cheetham was only accredited to Admiral Coundouriotis as Regent, although General Pangalos exchanged letters with King George V.

The British Legation at Kabul was completely burned down on December 22. The foreign Diplomatic Corps and the Afghan Government rendered all possible assistance and there were no casualties. The Legation staff are removing to the new Legation building which is under construction.

Field-Marshal Lord Plumer, High Commissioner for Palestine, on December 22 laid the foundation stone of the new premises of the British and Foreign Bible Society in Tancred Lane, Jerusalem. Copies of the Scriptures in English, Arabic, Hebrew, Greek, and Armenian, with a map of Jerusalem, were deposited in the foundations.

The British Red Crescent Society has received an urgent appeal from Mehmed Bey Konitza (late Albanian Minister at the Court of St. James's) calling attention to the suffering of Albanian refugees who have returned to their own country from which they had been excluded by the new frontier lines. A sum of £175 for immediate relief has been sent, and the Society appeals for subscriptions, which should be sent to its bankers, Messrs. Coutts and Co., 440, Strand, W.C.

THE WEEK AT HOME.

London, Tuesday Morning.

Yule Tide.

The weather this year at Christmas Tide was full of the most English perversity. After leading us up the lane, so to speak, for a few days before Christmas with winds and skies that promised snow, the Day itself dawned cheerlessly and rawly, and in such a state of ill-temper that it actually rained in the afternoon and evening. Not until Boxing Day did the sun remember that he also was on duty. All this meant, at any rate for the South of England, that folk kept by their fireside, and such detention will long be remembered by those for whom the vagaries of the railways and coal merchants had seen that there was no coal.

Perhaps—I do not know—in other parts of England the coal supplies and the weather may have been better, and the whole holiday in consequence jollier. Certainly all the preparations pointed to a time of fun and generosity. But one could feel, even as early as in Church on Christmas morning that the climate had us astonishingly at its mercy, so that it was only children who at Christmas time could shake us out of our wheezy and grumbling selves.

Another Socialist Victory.

More than usual piquancy was introduced into the by-election at Smethwick last week, partly because there appears to have been considerable liveliness in the public meetings, and partly because Mr. Oswald Mosley, who was easily returned at the head of the poll, was born an aristocrat and married the daughter of the late Lord Curzon. Upon the first subject all the daily papers have duly sermonised: the violation of the freedom of speech, the eternal liberty of Englishmen, the inevitable redounding on the Socialists' heads of misrepresentation, and so unconvincingly on. This preaching has no effect on anyone.

What is much more interesting is the attempt made in some quarters to show Mr. Mosley as (what is called) a traitor to his class. It is a curious intellect which indulges in this kind of charge, but without doubt it is sincerely made, both by the "bourgeoisie" and by the "proletariat." Patently it is a hollow charge, for if you deny sincerity to one whose political opinions are not those of the majority of his most intimate companions, you must equally deny integrity to one whose political opinions coincide with those of his circle. The secession of the wealthy to the ranks of Socialism has, however, already gone far enough to make this particular charge ridiculous.

If the accusation be framed as one of political self-interest, that is another matter. But the Socialist Party can scarcely be said to monopolise the body of young men who have political ambitions. Personally, I think it proof of the essential Englishness and up-to-dateness and sincerity of the Baldwin family that the head of it should be a Conservative, the scion a Socialist, and his sister one who supports her father at election times but gives lifts in her motor-car to her brother. . . .

Seriously, however, this Smethwick election but shows again, not perhaps that the country is wedded to Socialism, but that it is gradually turning against the present Conservative Government. For the Unionist candidate to have lost nearly 4,000 votes, and for the Liberal candidate to be once again in the accustomed position of having to forfeit his deposit, are sufficient straws to show which way the wind is blowing. As for the claim that the Smethwick election proved that the "Reds" are behind, and will eventually dominate, the Labour Party, it has no more foundation than that the British Fascists are behind the Conservative Party, and will eventually make it a Die-Hard concern.

The Pronunciation of Latin.

As I think I have said before, pronunciation is a thing which sometimes drives men to fury, and there is considerable truth in the remark which was made last week at the Conference of Headmasters, that the new pronunciation of Latin had been responsible for more common-room profanity than anything that schoolmasters had ever known. There was a most readable debate upon this question of the pronunciation of Latin, which still excites classical students. Some downright schholar had proposed a resolution declaring that "the reformed pronunciation of Latin, now having had a fair trial, has failed to justify itself by results." But this was defeated by 38 votes to 9.

The *laudatores temporis acti* were, therefore, badly defeated by those who urged that there was no sort of uniformity to which a return might be made, and that the new pronunciation was in line with the pronunciation of French, Italian, and Spanish, having, in fact, been endorsed by the Classical Association.

Worthington and Bass.

These new-fangled mergers or fusions or amalgamations, or whatever word those choose for whom the resonant and significant word "trust" is inadequate, may be all very well in their way, but when it comes to joining two such excellent rivals as Worthington and Bass, it is surely time to protest. Of course this new combine is going to affect in no way the separate brews of the two famous beers: that has been definitely stated. But surely the combination is bound to affect the fortunes of one or other of these two delights. They can, for instance, both be advertised at once; and with the bottle, it may be that only the label will be different. One will probably sell less well than the other, and will consequently cease to be manufactured. And, of course, it may be the worse beer that is preserved: for one of these ales is, you know, better than the other. . . .

No more, it seems, shall we hear of gay souls being "pretty well bassed," or new songs like (the now immortal) "I'd sooner have a bottle of Worthington." Ah, well, the march of the times, I suppose. . . .

ALTER EGO.

The Turkish Cabinet has approved the arbitration agreement settling the dispute between France and Turkey arising out of the sentence of imprisonment passed by the Turkish Courts on an officer of the French steamship Lotus, which had collided with a Turkish vessel. Ismet Pasha, the Prime Minister, has accordingly signed the agreement, which has been forwarded to the Arbitration Tribunal at The Hague.

THE INDIAN ELECTORATE.

It is generally believed in India that Lord Winterton's visit is intended as a reconnaissance of the ground preparatory to the early appointment of the Statutory Commission promised for the year 1929. It is pointed out that, if the composition of the Commission is announced next spring, it will be able to get to work in the autumn and should report in 1928, so as to allow of the completion by Parliament of the consideration of its recommendations before the next Indian general election, due at the end of 1929: also, incidentally, within the lifetime of the present Parliament and, so far as can be foreseen, during the currency of the present Conservative Government. The Anglo-Indian Press, in discussing Lord Winterton's visit, does not lose sight of its official label of "short, private and unofficial"; but recalls the fact that his previous visit in 1922 was curtailed owing to the occurrence of an unexpected general election at Home. It expresses the hope that, on this occasion, he will find time and opportunity to have "private discussions with leaders of Indian opinion and feel their pulse," since his previous visit was, from this point of view, "not fully educative." In particular, it is expected that he will devote special attention to "the question of the relations of the Indian Princes to the Government of India as it will be constituted after revision by the Statutory Commission": and it is suggested that he will help the expeditious handling of this question by bringing India Office opinion to bear on it. Of Lord Winterton's ability to do the latter there can be no question; indeed, during his previous visit it was occasionally urged that he gave the impression of one who had come to India not to learn but to teach—that he was less interested in finding out the opinion in India about Indian questions of the day, than to explain what was the India Office opinion on such questions. If, as may be expected, Lord Winterton's attitude—it would be more correct to say apparent attitude—has changed during the last four years, he will certainly be in a position to collect a great deal of information about India's present political situation to take back with him to the Secretary of State.

It is obviously desirable that the next Indian general election should be held under the new dispensation: and, as the *Statesman* (Calcutta) points out, one of the most important questions to be considered, before that election takes places, is the matter of a reform of the franchise. Three general elections have revealed the extent of the failure of the present system: and the proposals put forward in Mrs. Besant's Commonwealth of India Bill, though it does not contain much else of practical value, are among the best that have so far been made in this connexion. She recommended a graduated franchise, beginning with universal adult suffrage in the villages, with progressively higher qualifications in the superior electorates—in fact, a sort of Soviet system. Discussing the same point, the *Englishman* expresses the belief that the Home authorities had great hopes of an improvement in the electoral sense of Indian voters at the recent general election; but, if so, they have been disappointed. The Swaraj Party still remains the strongest political party in India: and that this has proved to be the case is the greatest condemnation of the "ignorant and gullible electorate," to whom the Swaraj programme of "unnecessary obstruction, of mistrust and misrepresentation of every action of the bureaucracy" still appeals with unabated force. That this should be so is, of course, no guarantee against a Swarajist change of front, through the acceptance of ministerial responsibility, "so soon as their constituents have been disposed of for another three years"; but, even if this should happen, the worst charge that could be brought against the Swarajists would be one of political immorality—one that cannot be confined to India: while the charge against the Indian electorate, as at present constituted, remains an absolute one—complete and proved unfitness to exercise the franchise. The *Englishman's* valued and distinguished Indian contributor, Bepin Chandra Pal, regrets to find, in the character of the election propaganda of almost every party, proof of how deep and wide is the antagonism of the electorates to the British Government: and goes on to deplore the "universal anti-British feeling in the country." This is a good example of the invariable habit, of the Indian politician, of assuming that the less includes the greater. There is no foundation whatever for the statement that India is universally anti-British: not even for the belief that the electorates are so; but no politically-minded Indian can be brought to believe, much less to admit, that "the country" does not consist solely of the microscopic minority represented by himself and others who think more or less like him. It is doubtless true that the great majority of politically-minded Indians feel antagonism towards the British Government; but it is quite untrue to say that the electorates do so—all that is wrong with them is that they are, in the mass, incurably and impenetrably stupid, and that they respond, freely if passively, to the clamour of politicians only less stupid—though much more inexcusably so than themselves. Any Englishman, whose duty or pleasure takes him away from the near vicinity of the large towns, can testify that the anti-British feeling, about which one hears so much, is an invention of the politicians not merely devoid of truth, but very nearly the complete reverse of the truth. So far, then, as the verdict of the electors has been anti-British, they have conspicuously failed to voice the feeling of the real country, or of any part of it except what politically-minded Indians mean when they speak or write of "the country"—themselves.

A serious attempt to improve the electoral system should be the first preliminary to the revision of the Constitution of British India, whatever form the latter may take: and one is pleased to find so important an organ of British opinion in India as the *Statesman* advocating a revision on the general lines already several times urged by THE NEAR EAST AND INDIA. The *Statesman* believes that the aim of the near future should be the grant of the widest possible form of local autonomy, tempered by supervision and central control. In a large variety of questions the educated Indian is perfectly competent to look after himself; but a strong central authority is in-

Digitized by Google

dispensable, and where is it to be found at present if not in the British Raj? The solution would seem to lie in making the Government of India as strong as possible, while trusting local Governments as much as possible: and the ruling Princes, well content with their present status in a British-governed India, though excusably nervous about their position under an indigenous Government, would know that they had nothing to fear with the resolute central British Government in which to put their trust. "Nothing is more desirable than real responsibility in the Provinces; but, so long as India remains part of the British Empire, the King-Emperor's government must be carried on. It follows that the central government must be predominantly British, not in race perhaps, but certainly in purpose. There is no other unifying factor in India, nor any present hope of one." Disregarding—as, for all practical purposes, it must be disregarded—the conditional parenthesis, and replacing "provincial" by "sub-provincial," this is the solution consistently advocated in these columns: and it is as pleasing to find such influential support of it as it is flattering to believe that the source of its inspiration is to be traced to THE NEAR EAST AND INDIA.

CURRENT TOPICS.

Civil Aviation.

The Times of December 21 prints extracts from the Report of the Indian Air Board; but persons interested in the progress of civil aviation in India will perhaps welcome a further selection, from the portions omitted by *The Times*, on which it is unnecessary to comment beyond stating that the "Civil Aviation Branch of the Department of Industries and Labour" was instituted in the autumn of 1920—more than six years ago. The personnel of the Air Board consisted of the Secretary of the Department mentioned, as President, with the Army Secretary, the Directors General of Posts and Telegraphs and of Observatories, and the Air Officer Commanding in India, as members. Its composition, therefore, with the possible exception of the member last mentioned, conformed strictly to Indian official type: a fact that is driven home by the comments of the two leading Anglo-Indian newspapers of Calcutta, one of which remarks that, until the publication of its report, it would be safe to say that not one person in a million had ever heard of the Air Board's existence; and the other that, if the Board held any meetings, it held them in secret, and if the members visited any aviation grounds or aerodromes, they visited them in disguise. The report, which seems to be the first, as well as the last, that the Board has produced during its six years' existence, recommends its own extinction and the continuance of its "work" by a Director of Civil Aviation, whom the Government of India is understood to have requisitioned from the Air Ministry in England.

"India's geographical position marks her out as an all-important link in any air route between Great Britain and her Eastern Dominions. Up to the present India has done nothing in the direction of developing her own commercial air services. Other countries and Dominions have forged ahead: India alone remains aloof. The question whether she shall continue in this position must now be faced, for two services to India—an aeroplane service from Egypt and an airship service from England—will be established in the near future, and their arrival will almost inevitably be followed at no very distant date by proposals for extensions across India itself. . . . Unless India to some extent pays the piper, she will not be able to call even part of the tune. The Air Board have therefore considered it their duty to review the position . . . owing to the decision of the British Government to inaugurate two aerial services, as, with these services about to land upon her shores, India is being forced to determine her attitude towards the general question of air navigation. . . . The Government of India should now take steps to establish the claim to be consulted at all stages on the terms of any contract for an air service touching India or in which India is necessarily interested. It is too late to assert such a claim regarding the Cairo-Karachi service, but it should be pressed when the contract terminates or undergoes substantial revision. . . . The Board hope that, if the policy recommended by them is accepted by the Government of India, every effort will be made to find the necessary funds to give effect to it speedily, for they are impressed with the danger that, if action is not taken speedily, it will be taken too late."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 9.

The Political Muddle.

Considered reviews of the election results are now appearing, and a perusal of them leaves the situation rather more obscure than ever. Although the Swarajists have scored heavily in most of the Provinces, they have lost headway in the Central Legislature; but the Extremists themselves are changing, as is shown by the new label which they have given to themselves, "Congressites," while many of the Moderates claim to be as good Swarajists as the people they have been opposing. Again it is said that many of the people who have taken advantage of the Congress organisation to get seats under its banner are by no means whole-heartedly with the party and are merely looking for place and influence. The kaleidoscope is changing every day, and in Bengal doubts are beginning to be expressed as to whether it will be possible to form a Ministry at all, owing to personal jealousies within the parties. It is rumoured that the Governor intends to give the Swarajists as the largest party in the House the option of appointing two Ministers; what will happen no one is prepared to prophesy. In the meantime the Bengal Congress Committee has had a most stormy meeting at which Mr. J. M. Sen-Gupta, the present wearer of the triple crown, handed in his resignation of this section of it. The widow of the late Mr. C. R. Das has been appointed as his successor, but this is not serious politics. However, sentiment apart, it will serve to conceal internal troubles.

Europeans in Conference.

All-India Conferences are taking place this week at Cawnpore, representatives of the European Association and of the various European Chambers of Commerce in India having taken advantage of the presence of the Viceroy there during his tour to hold their annual meetings. The Viceroy addressed the Associated Chambers at the beginning of the week and gave expression to a certain amount of optimism in regard to the recovery of the trading position generally. The proceedings of the European Association have been favourably commented upon by the English Press, particularly a resolution which suggested that the time had come when a definite policy should be formulated by the Association in regard to the position of Europeans in Indian politics, and recording the opinion that Europeans are prepared to unite with Indians who have a real stake in the country. All sections of the Indian Press, however, unite in protesting against this. Even the Moderate *Bengali* refers to the members of the Association as British Extremists. *Forward*, of course, proceeds on its usual basis and paints the European in India as possessed of a fiendish ingenuity which governs his every action, his one idea being to line his pockets and to crush the indigenous population into permanent subjection. Its leader is headed "Birds of Prey and Passage," and, if *Forward* had its way, it apparently would muzzle every European until it had completed its arrangements for universal deportation. It is difficult to understand the mentality which is behind this venomous campaign for increasing race hatred and misunderstanding, but it bears a curious resemblance to the results of Bolshevist activities in China.

Indian Trade.

The Review of Indian Trade for 1925-6 compiled by Dr. D. B. Meek, Director-General of Commercial Intelligence, has been published during the week. It is not altogether an encouraging one; but the general conclusion is that during the last three years export trade has recovered to a position equal to that before 1914. The import trade, however, has still far to go to reach that position, and this circumstance would seem to indicate that the country is short of purchasing money. Confirmation is found in the fact that imports were less by 14 crores than in the previous year; but in spite of this there was a large increase in the importation of motor vehicles, more than a little of which must have been an expenditure of the luxury type. The balance of trade in favour of India amounted to Rs.161 crores, which compares with Rs.78 crores, the pre-War average. The tea trade has had another prosperous year, and trade with Russia generally shows an increase. Less jute was exported, but the value was higher owing to an increase in prices, which appears to indicate that the supplies of jute are less than adequate for the world's needs.

Men and Things.

The mail was again half a day late in delivery this week; now that both the coal strike and the Great War in France are both over we should be pleased to see a return to the regular habits which preceded 1914.

The obituary notices this week include the late Mr. A. Bowie of the Allahabad Bank. The sympathy of his many friends is offered to his widow.

The Agricultural Commission has been continuing its sittings in Calcutta this week, and amongst the witnesses was Dr. Bentley, Director of Public Health in Bengal, who voiced his resentment at the checks which he suffers from Government and others to his enthusiasm.

The Currency protagonists continue their streams of statements and arguments; either may be right, but at the moment the balance of public opinion here seems in favour of the official view and 1s. 6d.; at least it is felt to be more disinterested; the Indian political Press, however, is losing no opportunity to vilify the Government and the European community, accusing them both of a conspiracy to bleed India of its wealth.

Conflicting statements have been published recently by special Press correspondents in Delhi in regard to the sittings of the 1929 Commission. It was stated in the first instance that the Commission was likely to be appointed next year, but later advices say that the elections have made it quite certain that there will be no expediting of the review of the situation.

The Viceroy arrives in Calcutta to-morrow for his first cold weather visit. The official route has been extended so as to go through the north of the city, including the thoroughfares which were recently the centre of the riots. It will be interesting to see how His Excellency is received in these areas.

The Trivial Round.

Racing on Saturday at headquarters drew the largest crowd seen this season and one of the principal attractions was the appearance of Orange William in the December Plate. He was by no means so hot a favourite as at this time last year, the books closing with him at 5 to 4 on, and he was beaten by a short head after losing half a dozen lengths at the start. Experts consider that his showing was worthy of himself, than which no praise can be higher. It was an afternoon of surprises, as is shown by the following returns paid by the totalisator on a ten-rupee note: Rs.222½, 81½, 638, 85½, 310½, 151½, 64½, 83½, and 29½. The bookmakers' smiles were dazzling.

The M.C.C. did not show any great superiority over local talent in Bombay, and their dismissal for 135 in their second innings against the Parsis and Europeans combined encourages the view here that they are by no means invincible, given a little luck. The stands round Calcutta ground are nearly ready and the increasing interest in cricket is indicated by the record crowd last Sunday to see the European and Bengali Schools play their annual match; the result was a draw much in favour of the former.

The tennis tournament run by the South Club is going great guns, and all the leading lights have been seen on the courts. This is another game which is making an increasing appeal to the Indian, and the standard of ordinary play in Calcutta is certainly improving.

"The Quaints" are at the Empire again this week, and they have repeated their very successful version of "No, No, Nanette!" which, difficult as it may be to believe for those who have only seen it at Home, they do without a chorus. The touch of genius which "Bobby" Salisbury brings to all his shows is very much in evidence in this, and the public are responding well to his efforts.

There are two important musical events this week, the first Singing Festival of the European Schools taking place on Saturday, and the Second Symphony Concert on Sunday. At the latter we shall have the first performance in the East of Cesar Franck's Symphony in D Minor.

Markets.

The jute market, after passing a somewhat slack week, has firmed up at the close, and prices are a shade better on balance; gunnies have improved after a dull opening partly as a result of the sinking of a steamer conveying a large cargo to the River Plate, and a sharp rise in price followed. In the piece-goods market there has been a distinctly better tendency, with a growing demand especially for seasonable goods. Dealers are inclined to take a more sanguine view of the position, and the opinion is that with the cotton obtainable at the lowest price for nearly 30 years, the world consumption of finished goods should gradually expand to a considerable extent.

Little change has taken place in the tea market with the exception that at the sale here this week autumn flavours have commanded higher prices than previously; the position may be described as steady to firm.

In the Stock Markets, Government Securities show little change since the last review, with the exception of 3½ per cent. Paper, which on an inquiry from Bombay has been quoted over Rs.78; a number of transactions in debentures have been made, mostly at full prices. Until yesterday jute shares were inclined to fall away: but an active demand set in, as a result of which all the favourites were dealt in at prices above those prevailing during the earlier part of the week; this section closes firm. Coals have declined further and are gradually reaching the level obtained before the coal strike at Home. The undertone in the tea share market continues to be good, but demand is very limited and sellers of any shares but the best are finding it difficult to negotiate; the local sale was again satisfactory this week. On the raw material again losing ground, quotations for rubber shares have receded further; few transactions have taken place in the tin section, but prices have remained steady.

The Exchange Market has been dull but steady, with very little business passing; Ready T.T. is quoted at 1s. 5 3/32d. Money continues easy and may be nominally quoted at ½ to ¾ per cent. call and short notice.

THE INDIAN MAIL.

Trade Returns for October.

The returns of India's sea-borne trade for October show an increase over the previous month in the value both of imports and exports: the former having risen from 1894 to 1997 lakhs and the latter from 2283 to 2313 lakhs. India's net import of treasure during the month amounted to 301 lakhs, and the visible balance of trade in her favour to 98 lakhs.

Under the main heads of imports, the value of food, drink and tobacco rose from 330 to 339 lakhs, of manufactured articles from 1386 to 1428 lakhs, and of raw materials from 143 to 198 lakhs. The imports of cotton piece-goods were slightly less than in September, amounting to 143 million yards in quantity and 456 lakhs in

Digitized by Google

value. Of these totals, grey goods accounted for 54 million yards and 141 lakhs, white goods 44 million yards and 141 lakhs, coloured goods 45 million yards and 174 lakhs. It is worth noting that, when compared with the figures for the same month a year ago, the present ones show a marked fall in the price of cotton piece-goods, amounting approximately to 6 per cent. in white goods, 11 per cent. in coloured goods, and 15 per cent. in grey goods—the last being the line in which Japanese competition has been most prominent, the first that in which British manufacturers have continued to hold the field, and the second that in which European Continental competition has been most in evidence.

Under the main heads of exports, the value of food, drink and tobacco has fallen from the September figure of 729 lakhs to 617 lakhs, while that of raw materials and produce has risen from 770 to 805 lakhs; and of manufactured goods from 765 to 865 lakhs. The amount of raw cotton exported during October was only 7,000 tons: and of this Italy and Germany took 2,000 tons each, Belgium 1,200 tons, and other countries—including Japan, the marked reduction in whose taking in September was commented on last month—too small a quantity to justify an individual figure in the report as issued. India's export of raw jute rose from 60,000 tons, valued at 217 lakhs, in September to 84,000 tons, valued at 306 lakhs, in October: and there was also a marked rise in the export of jute manufactures over the previous month, the export of gunny cloth increasing from 138 million yards, valued at 267 lakhs, to 157 million yards, valued at 300 lakhs, and of gunny bags from 39 to 50 million in quantity and from 220 to 275 lakhs in value.

The United Kingdom's share in India's import trade rose slightly, from 46 to 47 per cent., but her share of exports fell from 29 to 25 per cent., compared with September: the share of the United States in imports increased by 50 per cent., from 6 to 9, while those of Japan and Germany, which had been 6 and 8 in September, were 6 and 7 in October. In exports, the share of the United States also showed improvement, from 10 to 11 per cent., and that of Germany rose from 6 to 7: but that of Japan, which had made a surprising fall in September from 11 to 4 per cent. (after having been 19 per cent. in January and March, 22 per cent. in February, and having averaged 15 per cent. during the period April-July) fell still further, to only 3 per cent. in October.

The Retail Fruit Trade.

Correspondence on the subject of fruit-growing in India has lately been proceeding in some of the leading Anglo-Indian newspapers: and it has been declared that, though there is a considerable demand for fruit, its distribution in small parcels, to individual consumers is hampered by the almost universal practice of pilfering on railways. An article in the *Statesman* asserts that there was, at one time, a considerable trade in fruit from Quetta and Kulu, but that this has now almost disappeared because there is no way of ensuring that parcels despatched from the fruit farms reach the buyer intact. The pilfering is generally done quite openly. Baskets of fruit are usually secured in gunny bags: and "a porter produces a knife and picks out for himself a mango, an apple or a couple of oranges. He hardly thinks it a sin. Others, seeing the hole, help themselves in moderation also, a passing passenger or two has a pick at the basket, till presently it is half empty. This kind of thing goes on all down the line; so that fruit bought by parcel post is expensive, with the result that the trade languishes." That this is not an overstatement of the case practically everyone, who has had experience of the matter in India, will agree. A few years ago the late Viceroy told an interested audience that he had just received a basket of mangoes from an Indian friend, and found, inside the top of the basket, a boldly written notice: "The mangoes marked with a piece of coloured paper are for His Excellency's table. Those not so marked are intended for railway employees en route." What looks like the obvious remedy is to provide thief-proof baskets for fruit; but, apart from the extra expense entailed, this has its special drawback also. The writer of these notes, after having received several parcels of fruit minus most of their contents, suggested to the despatcher that he should wire his next basket. He did so, and the parcel duly arrived without loss of the contents, which were mangoes; but every single fruit was smashed to pulp, the stone, in every instance, being separated from its fruit: the only possible explanation being that the pilferers en route had revenged themselves for being unable to open the basket, by playing football with it.

There is, in India, no redress for such "accidents." Railway charges for carrying goods at railway risk are practically prohibitive: and, in the case of articles carried at owner's risk, compensation for loss or damage is only obtainable on proof, which it is of course practically impossible to obtain, of dishonesty or wilful negligence on the part of the Company or its servants. The comparatively recent establishment of "watch and ward" departments on a number of Indian railways, though primarily intended for the protection of the railway itself and not of its customers, has sensibly reduced the enormous loss incurred through theft and pilfering; but a great deal still remains to be done in this direction. There is no trade that does not suffer from these depredations: and the fact that they have practically extinguished a comparatively minor one, the retail trade in fruit, has excited little attention. It is, however, a trade of some importance, and one with considerable possibilities; and it would be well worth the while of the railways to make a serious attempt to check its decline for which they have been almost entirely responsible. If they will take the trouble to do that, the results should be of considerable importance not only to themselves, but also to the fruit-growing industry, especially in the North of India, whose products would be in great demand in many parts of the Peninsula, given the sole condition of safe and efficient transit.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
London, Tuesday Morning.

Diala Cotton Plantations.

In a circular to the shareholders of the Diala Cotton Plantations (which will be found on another page) the directors outline proposals for important changes in regard to the company. It may be recalled that the company was formed in June last year for the development in the first place of 36,000 acres in the Diala zone. Unfortunately difficulties arose with regard to the water supply, and at the meeting held on March 31 last a full statement was made of the position which had arisen between the company and the Iraq Government on the question, and at the suggestion of the Board a small committee consisting of Sir Alfred Mond, M.P., Sir John Latta, and Mr. E. T. Campbell, M.P., was appointed to confer with the Board as to the course to be adopted. For full details of the proposals now put forward I must refer my readers to the circular, but it may be said here that they are far-reaching, involving the cancellation of the existing concession and the grant of land in the Latifiyah area in its place and the alteration of the name of the company to Latifiyah (Iraq) Estates, Ltd. It is, of course, most disappointing that the exploitation of the Diala zone should have had such an unfortunate fate, but in view of the favourable report with regard to the other region it is possible, if the shareholders approve of the changes, that the company may yet justify the hopes based upon it. As I suggested in commenting on the formation of the company, investors generally are well familiar with the potentialities of the Sudan, "but Iraq figures largely as a *terra incognita* as a cotton growing country," and it is to be feared that one result of the ill-fortunes of the Diala Cotton Plantations will be to make investors fight shy of Iraq for a time at any rate.

Croydon to Karachi.

The departure from Croydon on December 27 of Sir Samuel Hoare, Secretary of State for Air, accompanied by Lady Maud Hoare, on a flight to India, in order to inaugurate the new Cairo-Karachi air service, marks a definite epoch in the history of the British Empire's air communications. Recent achievements have tended to reduce the element of enterprise and adventure in long-distance flying; but none the less Sir Samuel and Lady Maud Hoare are to be congratulated on the spirit which has prompted them to set a practical example for the encouragement of the first regular British commercial air service outside Europe. If, as seems certain, air communications are destined to play an important part in the development of the British Empire, it may ultimately be established that the British connexion with Iraq has made no small contribution indirectly to that development. The Cairo-Baghdad Air Service, unostentatiously inaugurated by the Royal Air Force six years ago and regularly maintained since then, has provided the real inspiration of the larger enterprise to India, which in turn should be the nucleus of an England-Australia Air Service. The experience and organisation of the Cairo-Baghdad route will have done more than any single flight, however spectacular, to place Imperial air communications of the future on a sound footing.

Bulgarian Refugee Loan Allotments.

There was an enormous rush for the Bulgarian Refugee Loan—indeed, the demand for it was such as to surprise some sections of City opinion—and the lists were closed five minutes after they were opened. In view of the rush it will come as a pleasant surprise to applicants to know that all who applied are going to obtain a portion of the loan. Applicants for amounts from £100 up to £2,100 will receive £100, and applicants for £2,200 up to £5,100 will be allotted £200. On applications for £5,200 up to £9,900 the allotment will be £300. Applicants for £10,000 will get £400, those for £20,000 will get £800, and those for £25,000 will receive £1,000. The allotment on applications for still larger amounts will be between 3 and 4 per cent. It has frequently been a cause of complaints in regard to allotments that the applicant for small amounts has been completely ignored, and it may be hoped that the example set in the present case will be followed in the future, for the small investor deserves just as much consideration as the capitalist who can apply for large portions of loans.

The Position in Greece.

Conditions in Greece were the subject of extended reference by Sir John Stavridi at the meeting of the Ionian Bank, a report of which will be found elsewhere in this issue. It has been the fate of the country since the War to have had a prolonged phase of unstable Government, and, while one revolution has followed another and has left the country's economic life outwardly unscathed, it goes without saying that the resulting instability has all the same contributed to retarding the country's progress. Sir John Stavridi commented on the promising nature of the economic outlook, but emphasised the point that for an important revival of trade, business, and prosperity a stable constitutional Government is essential, and that he thinks is on the eve of being established. Dealing with the period under review, he said that the year had been one of financial instability, and it was impossible to describe how quickly financial and economic conditions could change and the serious difficulties the managers of the bank in Greece had to meet.

Agriculture in Greece.

Sir John Stavridi pointed out that 1925 was a prosperous year agriculturally for Greece, but it was disappointing that the production of cereals had not increased to the extent that might have been expected from the work of the refugees. Greece is in consequence compelled to import a quantity of wheat equal to her production and from 20 to 50 per cent. of her production of other cereals. The explanation of this failure to overtake the shortage of cereals is to be found in the fact that the

refugees have turned their attention to the more profitable cultivation of tobacco. Needless to say, this heavy importation of cereals is a serious matter for the country, and it is a small consolation that the tobacco output is being increased. It is obviously desirable that a fair balance should be struck between the various branches of the country's production, and this is one of the matters with which the new Administration will have to deal.

The Sudan in 1926.

If the present year, which is now rapidly drawing to an unregretted close, has been an unfortunate period for Great Britain, it has been a period of progress for some of the regions comprised in the Near and Middle East, and has, broadly speaking, marked a further stage in the return to something approaching normal conditions. In the Balkans, Yugoslavia and Roumania may be said to have made distinct progress in economic development, and the rapid development of Roumania's oilfields holds out the prospect of a roseate future. Further East, Palestine has had economic difficulties to contend with, but is now showing signs of recovery which will be quickened in the New Year when the extensive schemes of development that are in train are in operation. Of all the countries in question there is none, however, which will be able to look back upon 1926 with greater satisfaction than the Sudan. For that region the year is marked by the opening of the Makwar Dam, which opens out great possibilities for the country. The past cotton season has borne abundant tribute to the results accruing from the development of irrigation facilities, and one consequence has been a sharp upward rise of the commerce statistics and a favourable balance of trade. The prosperity that has thus accrued to the Sudan has, however, only been partial in its incidence, and the failure of the dura crop has entailed hardship, and business depression. This, however, may be discounted as an accidental and passing phase, and it is possible to look forward with great confidence to the outlook for the Sudan.

COMMENTATOR.

As the result of a gas explosion at the Central Station, Sofia, on December 22, several employees were injured and much damage done to the buildings. Inquiry proved that the explosion was accidental.

The traffic receipts of the South Indian Railway Company for the week ended November 27, amounted to Rs.9,78,594, making the total from April 1 Rs.342,94,235. The corresponding figures for the previous year were Rs.9,98,961 and Rs.348,06,504.

Mr. H. A. F. Lindsay, Indian Trade Commissioner, will read a paper on "World Tendencies Reflected in India's Trade" before the Indian section of the Royal Society of Arts on January 21. The chair will be taken by Sir Charles C. McLeod.

One hundred delegates, representing 12 European countries, will attend the International Cotton Congress in Cairo, which is to be opened in the presence of the King of Egypt on January 25. England is sending 44 and Germany 16.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, December 28.

The week before Christmas lived up to its reputation for paucity of business in the Stock Markets. Prices, however, kept steady, and in some directions there was notable firmness, especially in the gilt-edged market where prospects of easier monetary conditions in the New Year were the main influence. The imminence of the settlement which began to-day, was an additional restraining influence, though bear covering in certain directions assisted in the stability of prices. In the industrial market the features were Courtaulds and Dunlops, the latter having recovered a little after an extensive fall due to selling prompted by prospects of a price war. The event of the week in the new capital market was the issue of the long-expected Bulgarian Refugee Loan for £1,750,000 in 7 per cent. stock at 92. These terms, it may be noted, are the same as those offered by the recent Belgian Stabilisa-Loan, now standing at a premium of 9 over the issue price. The Bulgarian Loan was issued under the auspices of the League of Nations, and the service of the loan appears to be amply covered by the revenues assigned for the purpose. The security, of course, is not so good as that offered on the Belgian Loan, but the issue was promptly oversubscribed. On resuming after the holidays the chief influence was the Treasury announcement of an issue of 4 per cent. Consols for the purpose of converting or repaying debt whose maturity date is approaching.

New Capital in 1926.

The activity of London's new capital market in 1926 has been somewhat remarkable when we remember that for two-thirds of the year the cloud of the coal stoppage hung over industry and commerce. Leaving British Government borrowing out of account, all other classes of borrowers have raised £225,000,000 this year as compared with £186,000,000 in 1925. To this increase, it is true, foreign Governments contributed by borrowing £24,000,000 in the London market, from which in 1925 they were entirely shut out by the embargo then in force. British municipalities, too, largely increased their borrowings, which, at £42,000,000, were approximately double the figure for 1925. On the other hand British railways, which in 1925 raised over £20,000,000 of new capital, did not enter the market this year. The statistics so far available show that a larger amount of new capital than last year was raised for the purposes of a wide range of British industrial and commercial ventures—a fact that is remarkable in view of the existence of circumstances calculated to damp the spirit of expansion and enterprise. In general it may be said that the rates which various classes of borrowers had to pay for accommodation showed little change from those current in 1925, money rates having remained unusually constant during the year. Now that the coal stoppage is over and the strain of autumn financing safely negotiated, the City looks for lower Bank Rate before long and cheaper rates for borrowers, although in view of the state of the trade balance issuing houses are likely to be cautious regarding the volume of foreign lending which will be undertaken.

Bank Dividend Prospects.

In the first few days of the New Year the dividend announcements of the great English joint-stock banks will

Monthly Supplement of "The Near East and India" : No. 24.

THE 1927-1928 BUDGET.

M. Ninko Peritch, the Minister of Finance, has just submitted to Parliament his proposed Budget for 1927-1928. (In the S.H.S. Kingdom the Budgetary year is reckoned from April 1 to March 31.) The Budget this year is balanced at a total of 11,690,000,000 dinars for both receipts and expenses. It is 814 million dinars less than the Budget for the preceding twelve months, and consequently marks an important stage in the Government's policy of economy.

This policy, however, is not new. It is based on the necessity of adapting public expenses and fiscal burdens to the present value of the currency. For more than a year now the dinar has been stabilised at 9.13 and 9.17 gold centimes, the fluctuations having been so small as to have no practical significance. The dinar fell to its lowest rate in January, 1923, when it quoted only 4.96 gold centimes; from that time onwards it improved steadily, and by August of last year reached 9.30 gold centimes.

The budgetary expenses nominally reached their maximum since the War in 1925-26, when they amounted to 12,321,366,220.90 dinars. But in order to make a real comparison between that Budget and the Budget for 1927-28 it must be remembered that in 1925-26 the Southern Railways had their own special budget amounting to 690 million dinars, and that it was only from 1926-27 that their expenses were included in the general State Budget.

The Budget for 1925-26, including the credits for the Southern Railways, slightly exceeded thirteen milliard dinars; that for 1926-27 amounted to 12,504 million dinars, while the 1927-28 Budget estimates expenditure at only 11,690 million dinars. In other words, the present Budget is almost 1,400 million dinars or nearly ten per cent. less than that for 1925-26. In reality the difference in round figures is one thousand million dinars, since the present Budget, like that of 1926-27, does not contain either receipts or expenses for the large estate of "Belye" which were included in the Budget for 1925-26 and preceding years. The question now arises, as to what is the real value of the economies thus effected this year.

Apart from all other causes, both primary or secondary which might have influenced the increase or decrease of the Budget, it cannot be too strongly emphasised that it is the value of the currency which has played the decisive part. From January, 1923, onwards the dinar improved gradually and steadily, until in August, 1925, it had doubled its value. Its average rate in March, 1925, was 8.29 gold centimes, and this was the lowest average for the year. In August of 1925 it reached its highest average with 9.30 gold centimes. The fluctuations since then have been quite insignificant. The dinar is stabilised, the trade balance active, and the stock of foreign bills sufficient to ensure henceforward against any appreciable fluctuations. Consequently monetary conditions during the whole period of the 1925-26 Budget scarcely differed from those of to-day.

During the same time, however, the purchasing power of the dinar followed a similar, but more pronounced curve. In April, 1925, the first month of the 1925-26 Budget, the average index of wholesale prices on the home market, reckoned in gold, was 165.4. After that it fell gradually until in March, 1926, the last month of the Budget, it was only 145.2, and even then continued to diminish, reaching 132.1 by August, 1926. Consequently, in a year and a half the wholesale prices of the chief articles decreased by 20 per cent.

During the same period the purchasing power of the currency has correspondingly increased on the home market. In spite of the fact that the index figures of world prices have shown a tendency to oscillate, the movement in this country has been one of steady adaptation of the purchasing power of the dinar to its new value. UPRAVA DRŽAVNIH MONOPOLA, BELGRADE.

tendency has been to level these two factors, the disparity between which was an inevitable, if temporary, consequence of the change in value of the currency.

The improvement of the purchasing power of the dinar has made possible the reduction of some credits, and in particular those for State purchases. Other credits, which did not possess the same elasticity, could not be subjected to such reduction. Such is the case with the annuities on foreign loans, the salaries and pensions of civil servants, and the pensions for the disabled, since in spite of the fall in the currency, all the persons receiving grants under the last two heads are getting the bare minimum of existence. For this reason the retiring pensions have been even increased by 106 million dinars or over 20 per cent. Another noteworthy increase is that of 31 million dinars in the credits for the annuities of the public debt. This is due in part to the burden incurred through the settlement of the War Debt to America, and for the rest to the more rapid redemption of the State's debt to the National Bank incurred by the withdrawal from circulation of the Austro-Hungarian kronen which took place at the time of the monetary reform.

More or less extensive reductions have taken place in all the other branches of expenditure, with the exception of the Ministry of Religion, where there is a slight increase of less than 8 million dinars, and the Ministries of Education and Agriculture, where the credits proposed are practically the same as in the present Budget. The apparent increase of 81.5 millions in the case of the first, and of 55.6 millions in that of the second are due to the fact that certain expenses of these Ministries were met formerly from Budgetary Reserve Credits, which are now reduced by that amount.

The revenues are the following: direct taxes and additional dues, 1,828,309,100 dinars; indirect taxes (customs, duty stamps, taxes on consumption), 3,531,080,000 dinars; State monopolies, 2,362,242,000 dinars; State enterprises and domains, 3,847,653,277 dinars; and various receipts, 130,715,623 dinars. These estimates have been made with the great care necessitated by the economic effects of the stabilisation of the dinar and the change in its purchasing power. Thus, in the 1925-26 Budget, the total receipts actually reached a round 12 milliard dinars (the accounts which were not finally closed amounting to 11,985,281,061.04 dinars). This does not include the receipts of the Southern Railways amounting to about 600,000,000 dinars. Consequently, the estimates of receipts are almost 900 million dinars less than the receipts during the budgetary year 1925-26. Naturally most of this reduction was effected by the State enterprises, which had to adapt themselves to the new position created on the markets by the stabilisation of the dinar at a relatively high level. For instance, the estimated receipts in the item "State Enterprises" are less than in this year's Budget by 734.5 million dinars, while the receipts from fiscal sources have been scarcely modified at all, being reduced by only 80 million dinars, or one per cent. The receipts of the State enterprises, forests, mines and domains, have felt the effect of the reduction of the price of transport and of products in general, of which the charcoal from the State forests is one of the most important.

The fiscal charges remain nominally the same as before, whereas in reality they are considerably higher, because they are reckoned in much sounder money. These, which are imposed in order to defray State expenditure, strictly defined without reckoning the receipts from State enterprises should amount in 1927-28, according to the estimates, to 7,742,400,000 dinars, or 600 dinars per inhabitant. To these must be added, however, the rates and dues imposed by the departments and municipalities, which amount to almost one-fifth of those charged by the State. In view of the fact that the economic conditions of the country, that it has not yet recovered completely from the devastation of the War, that its agricultural production is less than before 1914, and that the stock of cattle is hardly half what it was in 1923, these fiscal charges are as much as the country can bear at present without risk to its economic progress. V. D.

RAILWAYS AND AGRICULTURAL INTERESTS

When the World War had united into one State almost all the regions inhabitated by the Serbs, Croats, and Slovenes, one of the first and most important tasks to be accomplished, after the more urgent repairs of actual damage done by the War, was to develop internal communication between the different parts of the Kingdom, with a view to creating a national unit with co-ordinated economic and social functions. Accordingly, the State's attention had first to be directed to the railways which in every country form the arteries of an ordered social, economic, cultural and national life.

The new Kingdom consisted of regions which before the union had belonged to five States. These had had their own State bodies and separate interests, and consequently had built their railways along the lines of their own requirements and aims. Thus it happened that together with the districts which it obtained after the War, the S.H.S. Kingdom acquired also the fragments of other systems of communications, without connexion between them, and utterly without relation to the needs of the State itself.

This disjointedness of the railway system is best illustrated by the case of two districts lying side by side, which have the same natural and economic conditions, but which have no direct railway connexion. This is the case of Bachka and the Banat, which adjoin one another, and which communicated with each other before the War via the chief Hungarian centre of Budapest, and the secondary centre Segedin. In addition to Bachka, Baranya, Slavonia, Srem and Croatia all gravitated on Budapest and had very poor communications between themselves. Slovenia as far as railways were concerned, was quite bound up with Austria, and had only one wholly inadequate connexion with Croatia. Serbia had only one connexion with old Austria-Hungary, via Srem (via Indiya-Belgrade), and in relation to Bosnia and Herzegovina was "hermetically sealed." Dalmatia was partly, though not wholly isolated from the Yugoslav districts and gravitated towards Trieste, Fiume and Italy. Bosnia and Herzegovina also were insufficiently connected with Croatia and Slavonia.

In addition to this dismemberment, there were other divergencies between the interests of the new State and the railways as they already existed. One great difficulty lay in the fact that with the new provinces Yugoslavia inherited two different types of railway, a normal and a narrow gauge. The narrow gauge lines, of which there were about 2,500 kilometres, existed mainly in Bosnia, Herzegovina and Serbia, but were not connected one with another. The normal gauge system, over 7,000 kms. in all, was in the form of a semi-circle in the north-eastern extremity of the State, and had only one connexion via Sushak (Fiume) with Zagreb, Brod, Belgrade, Nish and Gnevgheli. The new territorial centre of the Kingdom (Bosnia and Herzegovina), therefore, was not in the same railway unity as the north-eastern semi-circle.

In order to remove these difficulties as early as possible and to work out a plan for the development of the railway system, the Ministry of Communications, under Dr. Korosetz called, in 1920, the first Communications Conference and entrusted it with the task of determining the principles of the new railway system. This was a very useful conference, because some of the new lines were actually constructed later on its proposals, and in accordance with its advice.

Private initiative also took a most important step. The Association of Engineers and Architects in Belgrade called a general congress of its members on August 5, 1922, and this congress drew up plans for the railway system, based for the most part on the proposals of M. Vaskovitch, which he had laid before the previous congress of the Association at Liubliana in 1921.

Recently, on November 16, 1926, the Ministry of Communications under Dr. V. Yovanovitch, called another conference for the purpose of drawing up a plan for the construction and completion of the railway system of the State.

The conference received six proposals; the official plan of the Ministry of Communications, and suggestions from M.M. Djuritch, Farmakofski, Kuzmanovitch, Milyenkovitch and Vaskovitch. These may be divided into two groups. One, including the official proposal, stands for a restricted scheme entailing the least possible capital expenditure. Its general idea is to complete each of the existing systems by as short lines as possible so that each may form a complete and profitable system by itself. The construction of lengthy new lines is avoided. The second group demands the construction of long lines, which would work into the narrow-gauge system also in such a way that the normal-gauge system would become the dominant national system, while the narrow-gauge system would take the form of local means of communications. The extreme representatives of this group even go to the length of demanding that the narrow-gauge lines should be converted into normal-gauge.

The representatives of agricultural organisations hold the opinion that agriculture cannot be developed and intensified without the construction of the necessary lines of communication. The following figures show how inadequate the present service is. In Voivodina there are 11,173 sq. kms. of territory to 1 km. of line; in Slovenia, Croatia, Slavonia and Srem the area per km. of railway is 12,985 sq. in Bosnia and Herzegovina 32,745 sq. km.; in Dalmatia, 37,848 sq. km.; and in Serbia and Montenegro it is even 47,714 sq. km.

M. Avramovitch, the initiator and leader for over 30 years of the Serbian Agricultural Co-operatives, showed in his investigations that agriculture in Serbia became capable of producing for the markets *pari passu* with the construction of the railway lines. The agricultural representatives also feel that the construction of new lines and the reconstruction of the old ones must be done in the cheapest possible manner, in order that the freights for agricultural products may be as low as possible; for it is just these products which have to bear the burden of the running costs of the railways. Finally they consider that the new railways must be built by means of loans, especially internal loans, and not out of the annual revenue of the railways as has been the custom hitherto. Only by means of loans with annual redemption rates can freights be imposed which are tolerable for agriculture. (At present agricultural products pay freights which are burdened by 100 per cent. capital expenditure on construction). This point of view is also maintained by other economic experts whom I know. It is also in conformity with the highest interests of the State, and for that reason is likely to form the basis of the final plan for the construction of the railway system of the S.H.S. Kingdom.

DR. LJUDEVIT PROHASKA.

(Continued from page 762.)

begin to make their appearance. No surprises are anticipated, though it cannot be categorically asserted that no changes will be made. A year ago when it seemed unlikely that any dividends would be increased the National Provincial raised its final payments and the Westminster Bank distributed a share bonus. It would be unwise therefore to rule out the possibility of dividend increases. Financial events during the past year do not point to any reduction in profits. Bank Rate has remained unchanged at the comparatively high level of 5 per cent., and it is on this figure that the rates charged by the banks for loans and advances are fixed. Moreover, we know from the monthly figures that the volume of advances outstanding during the past year has been on a higher level than in 1925. In their principal source of revenue, therefore, the banks are not likely to have suffered any reduction. Working expenses have probably been fairly stationary and the only really uncertain factor bearing upon the rates of dividend likely to be distributed is the extent to which provision will have to be made out of profits to meet bad and doubtful debts. This provision will probably be larger than in 1925 because of the dislocation in business caused by the coal stoppage. The outlook, however, is now clearer and the necessity for large allocations of profits to meet unforeseen contingencies will not be so pressing as it would have been had the coal dispute not yet been settled. Moreover, security values have been stable and there will thus be no investment depreciation to meet. It seems, therefore, that a maintenance of last year's dividends can be relied upon.

Reflections on the Rand Dividends.

It is customary for the directors of the Witwatersrand gold mining companies to follow a slightly more liberal policy in fixing the December than the June dividend rates; two or three companies, in fact, make their announcements at the end of the year only. Consequently, a somewhat increased degree of importance attaches to the December declarations. On the whole those just made cannot be regarded with any great degree of enthusiasm. It is true that one notable example of increase is supplied; the Government Areas is to pay 8s. per share, as against 6s. 6d. for several preceding half years. This undertaking is now the greatest gold producer of the world, and in its prosperity the Union Government has in practice rather more than a half interest. But examples of decline outweigh those of expansion; and the re-entries of the dividend list are counterbalanced by disappearances. The general reason for this position of affairs consists in the acute shortage of native labour which has arisen during the past month or two. The particular reasons affecting individual companies are to be found in unfavourable developments—as in the City Deep; in an accident as in the Consolidated Main Reef; or in the approaching exhaustion of the property, as in the Meyer and Charlton. Such, of course, are the inevitable incidents of mining and risks attaching to the holdings of mining shares.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

THE LATE SIR FRANK FORBES ADAM.

Sir Frank Forbes Adam, whose death occurred last week in London at the age of 80, was for long a prominent figure in the business life of Bombay and subsequently in the public life of Manchester. Born in 1846, the son of James Graham Adam, of Denovan House, Stirlingshire, he was educated at Loretto, and in 1872 went out to Bombay as an assistant in the house of Graham and Co. His rise was rapid and in 1884-5 he was President of the Chamber of Commerce. He represented the Chamber for a time in the provincial Legislature, while he also served on the Port Trust. In 1887 he presided over a Committee appointed by Lord Reay to consider the question of the expansion of Bombay. He was appointed a C.I.E. in 1888, and was knighted in 1890. Sir Frank began to take a leading part in business affairs in Manchester in the early 'nineties. In 1894, 1899, and 1903-5 he was President of the Chamber of Commerce, and was also a director of the Manchester Ship Canal. He took a leading part in the movement to develop and improve cotton growing. He was Chairman of the East Lancashire Territorial Force Association from 1914, and during the War was zealous in stimulating recruiting. In 1917 he was created a baronet, and two years later was made a C.B. He was a magistrate and a deputy lieutenant. He married in 1883 Rose Frances, daughter of Mr. Charles G. Kemball, some time Judge of the Bombay High Court, and they had three sons and a daughter. He is succeeded by his eldest son, Colonel Ronald Forbes Adam, D.S.O., R.H.A. Mr. Eric Graham Forbes Adam, Sir Frank's second son, a diplomatist of exceptional promise, died suddenly at Constantinople, where he was First Secretary at the Embassy in July, 1925. The third son, Mr. Colin Forbes Adam, C.S.I., was in the Indian Civil Service, and was Private Secretary to Sir George Lloyd when Governor of Bombay.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, January 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahratta for Port Said, Colombo, Madras, and Calcutta (London, January 8).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (Birkenhead, January 12).

British India Line.—S.s. Rajula for Bombay and Karachi (London, January 1); s.s. Mashobra for Colombo, Madras, and Calcutta (London, January 1).

Cunard Line.—S.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also Corfu, Gruz, and Ancona if inducement (Liverpool January 22, Swansea January 25); s.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Glasgow, Swansea, and Liverpool, January 29).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, January 12); s.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (first steamer of the season for the Danube) (Liverpool, February 5).

P. and O. Line.—S.s. Rajputana for Bombay (London, January 14.

Prince Line.—S.s. Soldier Prince for Malta, Alexandria, Syrian Coast, and Cyprus (London, January 5); s.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, and Beyrout (Manchester, January 11).

Ellerman and Papayanni Lines.—A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 31); s.s. Assyrian for Gibraltar, Melilla, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool January 1, Swansea January 1); s.s. Grodno for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool January 8, Swansea January 11); s.s. Company Meetings.

IONIAN BANK.

Conditions in Greece.

The eighty-seventh annual general meeting of the Ionian Bank, Ltd., was held on December 21 at Basildon House, Moorgate, E.C. Sir John Stavridi (the Chairman) presided.

The Chairman, in moving the adoption of the report and accounts, said:—As I foreshadowed to you at our last meeting, I visited Greece early this year and spent several weeks in Athens in touch with our principal officers, with whom I was able to discuss many questions relating to our work and future development. I was greatly interested in the improvement I found both in the country in general and in our own activity in particular. There is no doubt whatsoever in my mind that what is required to bring about an important revival of trade, business and prosperity is a stable constitutional Government in which not only the Greeks but the people abroad can have confidence. We appear to be on the eve of seeing such a Government established. If the rival politicians have learned wisdom and are prepared to sink their differences, there is a possibility of an era of peace and prosperity opening for Greece which should materially benefit our institution.

As to our activities during the last year, we have continued our expansion. We have opened new branches in Volo, the port of the province of Thessaly, the granary of old Greece; in Calamata, the principal port of Southern Peloponnesus; in the Island of Lemmos; in Canea, Crete, and in Sparta. We have established agencies in Levidion and Langadia and we are about to open another agency in Scala, and three agencies in new Greece, one in Naoussa, an industrial centre in Macedonia, and two in Xanthi and Drama in the rich tobacco districts. We have also extended our activities to Cyprus where, as an old-established British institution, we hope to be welcomed by the authorities and to contribute to the development of the island. Finally we have opened an agency at Assiut, an important cotton centre in Upper Egypt. In view of the strain to which our staff might be put to provide the necessary officials immediately for more branches, we propose to suspend further action in this direction for a time until our new branches have got into their stride.

In Greece, this year has been one of financial instability. It is impossible to describe how quickly financial and economic conditions can change and the serious difficulties our managers out there have to face.

Notwithstanding the hopes of the well-wishers of Greece that a status of Budgetary equilibrium had been reached, it must, unfortunately, be admitted that this has not yet been attained. Repeated increases of taxation have raised the revenue from Drs.76,500,000 (about £3,000,000) in 1912 to Drs.4,158,000,000 (about £10,500,000) in 1925-26, but the comparison between these figures in drachmæ and in their respective approximate equivalents in sterling clearly shows the havoc and vicious circle created by a depreciating currency. Whereas revenue in drachmæ has increased 55 fold, when expressed in sterling it has only increased to 3½ times the value of the 1912 revenue when drachmæ were at par. Meanwhile expenditure has also increased in a still larger proportion.

In round figures the external debt of Greece amounts to £72,000,000, 43,600,000 dollars, and French francs 222,000,000, excluding her portion of the Turkish debt and some minor items. The annual service of this debt requires the equivalent of about £3,500,000. The internal debt amounts to Drs.8,700,000,000 and its annual service absorbs Drs.428,000,000. During the year the external debt and the floating debt in gold have increased by about £12,000,000. The internal debt has increased by about Drs.750,000,000.

The fiduciary circulation showed no material increase in 1925. The cost of living in Greece has increased to 18½ times the pre-War level. It is higher than the ratio of exchange of the drachmæ to the £, which is about 16 times its par value. The balance of trade and the economic balance continue unfavourable.

Agriculture prospered in 1925. It is disappointing, however, that the production of wheat and other cereals has not shown the larger increase expected from the additional labour of the refugees. As a consequence, Greece will have to import a quantity of wheat about equal to her production and a proportion, 20 to 50 per cent., of other cereals. The reason for this disappointing result appears to be that the refugees turned their energies to the cultivation of tobacco, which is more profitable. It is high time that the Government should take in hand and remedy this most vital question, on the solution of which depends to so large an extent the rehabilitation of the economic position of the country. Now that the plains of Macedonia are available, the old plea of the insufficiency of suitable land for the production of wheat and cereals no more applies.

I think I can safely assert, without fear of contradiction by those connected with the financing of cotton in Egypt, that the 1925-26 season has been most disappointing. The policy we adopted saved us from capital losses which are reported to have been considerable in Egypt last year. It has enabled us to husband our resources against such time as may appear favourable for a renewed expansion of our operations and we will not be slow in availing ourselves of the first favourable opportunity.

I now come to our accounts. The alterations in many of the figures are due to the further depreciation in two currencies in which we deal, viz., drachmæ and £T. We proposed to add £15,000 to the reserve fund, subject to your confirmation. This is just half what we did last year, but it is still a substantial sum, and although your directors are desirous of strengthening our reserves as much as possible, they felt fully justified in maintaining the dividend and bonus at the same figure as last year on the increased capital. The bank continues to show a very strong position as regards cash in hand, at bankers, and in transit, the figure at August 31 being £657,351. There is again a reduction in investments, a reduction which we welcome, seeing that it proves that we have been able to find legitimate opportunities for investment in banking operations of a larger portion of the bank's funds. The securities of or guaranteed by the British Government still amount to £784,063, a very large figure as compared with the bank's capital and resources.

The report was unanimously adopted.

LAND BANK OF EGYPT.

A Satisfactory Year.

The following is a translation of the report of the Land Bank of Egypt for the year ended September 30 last, which was presented at the annual meeting at Alexandria on December 7:—

In the course of the year ended September 30 last our mortgage business, which for several years had been maintained at an almost constant level, underwent an important development which, we trust, will continue in the future. The series of financial operations begun in 1923 being terminated, our endeavours have been specially devoted to the development of our loans, and to obtain the necessary resources to attain that end we have, favoured by the conditions, issued in March last in Egypt, through the medium of the National Bank, to which we express our thanks for their valuable assistance, the last series of our 5 per cent. bonds drawn up in pounds sterling. That issue of a nominal amount of £323,350 was effected at a rate of 93½ per cent. with graduated instalments from March 15 to June 15, 1926, and has given results of which we have cause to be fully satisfied. Very well received in financial circles, the issue was covered twice over, thus showing the confidence which the Land Bank enjoys among the investing circles of the country.

Thanks to the new resources of which we have been able to dispose, the amount of our mortgage investments stands this year at £E4,002,073.765 as against £E3,787,514.028 last year. In this total we include 30 sales and 191 new loans of a total of £E633,650.499.

Digitized by Google

to which has to be added £E82,162.031 due by third party purchasers of land expropriated.

A fall taking place in the price of cotton during the last season, the total of the arrears has risen from £E324,175.822 to £E387,190.243, of which £E136,005.284 relate to arrears properly so called and £E251,184.959 relate to the current year. The stabilisation of the rate which seems to have arrived, joined to certain measures taken to assist the land owner in difficult circumstances, permit us to hope that the collection of annual payments will be carried on henceforward in better conditions.

On the other hand, the situation has improved from the point of view of estates. As a result of the sales realised applying to 15 properties and despite the new acquisitions in the country and of parcels of land in Alexandria for £E33,863.070, this account has been reduced from £E97,976 to £E77,879.

Continuing the prudent policy of which you have always approved, we carry to the various heads for eventualities a total sum of £E18,292.179, including:—Amortisation of one-fourth of the expenses of the issue of our 5 per cent. bonds, commissions on mortgage loans, movables, land improvement, and annual payments to be recovered for which the provision is 10 per cent. of the arrears. Further, the statutory reserve is increased by £E17,885.942, arising from various deductions effected on the results of the past year.

The net profit amounts to £E200,107.143 against £E199,634.627 last year. That position, similar to that of the past year, enables us to propose to you an identical distribution, which will be carried out in the manner conforming to the resolution of the meeting of 1924. After the statutory deduction of 5 per cent. for the ordinary shares, £E47,531.505, each of the categories having rights will receive 5 per cent. on the amounts carried to their credit, sums diminished by the amortisations already carried out in the two previous years. The dividends and ordinary percentages of the year will be then paid. These two factors united will give to each of the ordinary shares an amount of 14s., and to the founders' shares £7 12s. The amortisation of one-fortieth applied as before to the capital returned from our mortgage loans, permits a further anocation to the ordinary shares of 1s. 3d., and of £1 2s. to the founders' shares, so that the total amount received will stand at 15s. 3d. for the ordinary shares and £8 14s. for the founders' shares. We do not doubt that these proposals will obtain your complete assent.

Profit and Loss Account.

The receipts of the year arising from interest on mortgage loans, short term advances, deferred interests, etc., have been £E407,960.371. The service of the bonds, general expenses, fiscal taxes paid or due to the French Government, and various amortisations we propose to you, which stand at £E18,292.179 absorb a total sum of £E207,853.228. The profits to be distributed amount to £E200,107.143. From that sum there has first to be deducted the statutory 5 per cent. in favour of our 195,000 shares, £E47,531.250, and there remains to be divided £E152,575.893. On that balance there has to be deducted, in conformity with the decisions of the general meeting of December 2, 1924, the interest at 5 per cent. on £E872,646.447, profits carried forward on the 4 per cent. bonds. The interest falls to the various categories as follows:—Reserve £E4,621.556, the directors £E3,044.909, ordinary shares £E24,546.100, founders' shares £E10,519.757, £E43,632.322, £E108,943.571. In accordance with our statutes, 10 per cent. is placed to the statutory reserve £10,894.357, and 10 per cent. goes to the board of directors £10,894.357, £21,788.714. Of the balance £E87,154.857, 70 per cent. to the ordinary shares, £E61,008.400, to which has to be added the amount brought forward from the year 1924-25 £E2,508.892. In addition the share accruing from interest on profits carried forward £E24,546.100, making £E88,063.392. We propose to you to give out of this sum to the 195,000 shares 9s. per share, £E85,556.250, which, added to the statutory interest of 5 per cent. already mentioned, will represent a total dividend of 14s. per share. The carry forward of the shares will thus be £E2,507.143. An interim dividend of 5s. having been paid on June 15, it will remain to pay a dividend of 9s. per share. The 30 per cent. belonging to the founders' shares represents £26,146.457. Further, their share of the interests arising on the profits carried forward £E10,519.757, to which has to be added the amount brought forward from the year 1924-25, £E1,358.268. We propose to distribute a dividend of £7 12s. on each founders' share, and to carry forward £E974.482.

The Resolutions.

The general meeting unanimously (1) approved the accounts and balance-sheet for the year ended September 30, 1926, and gave the directors their discharge for their administration. (2) Approved the division of profits proposed by the directors and fixed the dividends as follows:—(A) A distribution of 14s. for each ordinary share: that distribution, in conformity with the decisions of the general meeting of December 2, 1924, includes, besides the ordinary dividend of the year, interest at 5 per cent, on £E490,922.010, profits carried forward, realised on the 4 per cent. bonds. An interim dividend of 5s. per ordinary share having been paid on June 15, it will remain to pay as a final settlement for the year 1925-26 9s. per share. (B) A distribution of £7 12s. on each founders' share: that distribution, in conformity with the decisions of the general meeting of December 2, 1924, includes, in addition to the ordinary dividend of the year, interest at 5 per cent. on £E210,395.147, profits carried forward, realised on the 4 per cent. bonds. It was resolved to carry forward £E2,507,142 for the ordinary shares and £E974.482 for the founders' shares. (3) By deduction on the capital recovered on mortgage loans, the meeting decided to amortise, up to one-fortieth, the profits carried forward realised on the 4 per cent. bonds, which will result in a supplementary distribution of 1s. 3d. for each ordinary share, with, on that fortieth, a carry forward of £E1,956.739, and of £1 2s. on each founders' share with a carry forward of £E176.994. (4) Re-elected MM. R. Abdy, P. Zarifi, and E. Bourre, the retiring directors. (5) Elected as director, S. E. Ziwar Pasha. (6) Nominated as auditors, MM. Charles Mazet, Franz Sofio, and Henri Pougin.

M. Grenard, who has been French Minister to Belgrade since December, 1924, has retired on pension on reaching the age limit, and M. Emile Dard, who has been French Minister to Sofia during the same period, has been appointed to succeed him.

The British Government has received a reply to its representations made to the Turkish Government respecting difficulties encountered by St. Barnabas pilgrims at the hands of the local Turkish authorities in their recent visit to war graves at Anzac and Suvla. The reply states that the local Turkish authorities misinterpreted the instructions given to them, and that effective measures have been taken to prevent the repetition of such regrettable incidents. It will be recalled that the pilgrims were refused permission to land.

DIALA COTTON PLANATIONS.

At the general meeting of Diala Cotton Plantations, Ltd., called for to-day, to enable the directors to carry through a scheme under which a fresh grant of land will be acquired by the company, proposals will be submitted for a rearrangement of the capital, under which the uncalled liability of 10s. per share will be cancelled.

In a circular issued to the shareholders the directors recall that an extraordinary general meeting of shareholders was held on March 31 last, when a full statement of the position which had arisen between the company and the Iraq Government in connexion with the supply of water was placed before the shareholders, and, on July 21, it was intimated that, as a result of the visit to Baghdal of Lieut.-Colonel J. H. Stanley, a director of Eastern Irrigations, Ltd., certain proposals had been formulated.

The possible failure of the water supply at certain periods made it essential to obtain from the Government an assurance that an adequate supply of water would be available, and, as such assurance was not forthcoming, the directors did not feel justified in committing the company to the substantial further outlay required to develop the 36,000 acres of land in the Diala zone as contemplated when the company was incorporated. The directors were therefore faced with the following possibilities:—(a) To continue to develop the cotton lands in the Diala zone by carrying out the programme outlined in the prospectus. (b) Abandon the concessions and liquidate the company.

To open up the large acreages of land on the Diala zone would have required considerable capital and revenue expenditure, and there was always the risk of an inadequate water supply, although if the Government had then failed to supply the necessary water, the Board were advised that they could have formulated a claim for damages. On the other hand, the liquidation of the company involved the possibility of substantial claims by the original concessionaires. It will therefore be seen that either alternative was equally unsatisfactory to the company.

While in Baghdad Lieut.-Colonel Stanley carried on protracted negotiations with the Government's representatives, including the Ministers and their British advisers, which were subsequently continued in London and resulted in suggestions being made for the settlement of all questions on the lines of cancellation of the concession, and the grant of land in place thereof. Briefly stated, the proposals are as follows:—(a) A grant to the company in Tapu (which is the most ample form of tenure known in Iraq) free from third party claims of 100,000 misharas (about 60,000 acres) of land in the Latifiyah area. (b) Such land to be paid for at the rate of Rs.2 per mishara (approximately 5s. per acre). (c) 10 per cent. of the value of any crops harvested upon the said land to be payable to the Iraq Government, subject, if pumps are installed, to four harvests being free of this tax and to a rebate of 10 per cent. on cotton assessments thereafter. (d) The Convention or Concession dated July 12, 1924, to be cancelled contemporaneously with the granting by the Iraq Government of the land referred to in paragraph (a). (e) The mutual release of all claims by or against the Government and this company and Eastern Irrigations, Limited.

The area of land which it is suggested should now be transferred to the company was, at the outbreak of War, the property of the late Sultan of Turkey; it is served by the Latifiyah Canal, and has been favourably reported upon. There would appear to be no question as to the adequacy of the water supply, and the company will be free to cultivate or dispose of the land. The original concessionaires have intimated that they are prepared to agree to these proposals provided they receive certain shares in the company as detailed later.

With regard to the development and exploitation of the Latifiyah Estate, it is estimated that the company has sufficient funds to enable this to be undertaken, and the directors recommend the following procedure in order to give effect to the suggested proposals:—

(a) The nominal capital of Diala Cotton Plantations, Ltd., to be reduced from £500,000 in shares of £1 each to £250,000 in shares of 10s. each, the uncalled liability of 10s. per share outstanding in respect of the 400,000 shares of £1 each now issued being cancelled, so that each share will then become a fully paid share of 10s.

(b) That 60,000 shares of 10s. each, fully paid, be allotted to Eastern Irrigations, Itd., in settlement of all claims out of which 30,000 shares of 10s. each, fully paid, will be transferred to the original concessionaires. In consideration of this allotment, Eastern Irrigations, Ltd., and the original concessionaires will agree to the cancellation of the Concession, and arrangements will be made under which Diala Cotton Plantations Limited will be relieved from its liability to pay to Eastern Irrigations, Ltd., the sum of £37,500, which is now outstanding in respect of the 50,000 shares in the latter company held by the former company, and will no longer be interested in such shares.

(c) The name of the company to be changed to Latifiyah (Iraq) Estates, Limited.

A fire on Christmas morning at Emin Eunu, at the northern end of the Galata Bridge, in Constantinople, did about £250,000 worth of damage, part of the Custom House being destroyed.

The Turkish Cabinet has approved the Greco-Turkish agreement recently signed in Athens relative to the status of non-exchangeable subjects of the two countries. The agreement will now be brought before the Grand National Assembly at Angora for ratification.

Port Fuad, a small township on the Asiatic side of the harbour, was on December 21 inaugurated by King Fuad. Port Fuad and Port Said were both beflagged and brilliantly illuminated for the occasion. Lord Lloyd, the British High Commissioner, was present at the inauguration ceremony of the laying of the foundation stone of the Town Hall of Port Fuad. The proceedings closed with a firework display.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended December 22:—

Egyptian Futures.—Sakel Contract.—Values in this market throughout the past week have shown a hardening tendency, due in part to the reluctance of operators to commit themselves on the short side, owing to the prevailing belief that prices have reached a reasonable level, and also, to some extent, to the fact that the Egyptian Government have now declared their intention of purchasing January futures at a basis of 23½ dollars should the market fall away to that figure. The existing idea that "short" commitments are not advisable at the present level has tended at times to create rather a narrow market, and owing to the limited amount of contracts offering, quite unimportant buying orders have at times unduly influenced values. The one and only factor that can have an ultimate and permanent effect on the outlook continues to weigh against the market; we refer to the present state of the fine spinning section of the trade, where inability to secure adequate margins and sufficient orders has led to the consumption of Sakel cotton being drastically reduced during the past six months. Up to a short time ago the Continent were rather active buyers, but more recently all reports from this source indicate that the conditions there are even worse than at this side. Probably the next two months will be the most critical period of the season for the cotton covered by this contract, as, unless the demand expands materially, prices will have to decline to the economic basis necessary to force in business. The very important factor that during the above period a large Sudan crop will begin to be marketed has to be kept continually in mind; this will have the two-fold effect of competing strongly with whatever Sakel demand may then be in evidence and will also weigh on our contract, as Liverpool is the only hedge market for this variety existing. Whilst the current positions have gained in strength in comparison with the more distant options since we last wrote, the maximum differences established have just failed to be maintained, the following causes being responsible and likely to serve as a check for the time being; these are, the narrowing-in of the spot differences with the contract, the establishment of a heavier premium over Alexandria, and lastly, the very moderate off-take latterly experienced. To conclude, we must say that the crux of the whole outlook lies in the hands of the trade at the moment, the market is held more or less by sentiment, backed up by the before-mentioned Egyptian Government's declaration to stabilise values at a stated price.

Upper Contract.—This option has not attracted much business during the past week, but with American values slightly on the up-grade and a moderate amount of trade support, prices have hardened somewhat, closing 25 to 42 points advance on the week. The price fixed by the Egyptian Government to purchase this variety is 15½ dollars for the February position in Alexandria. We very much doubt whether this figure will be reached, as basically the cotton covered by this contract may be termed reasonable in comparison to other varieties. In addition to this, consumption tends to increase, and in contrast with the Sakel demand, a continual flow of orders for c.i.f. cotton is passing out to Egypt. We think prices will harden further in the course of the next few weeks.

Egyptian Spot.—A somewhat improved inquiry has been in evidence, but unfortunately results have not been commensurate. Particularly noticeable has been the decrease in the amount of business transacted in Sudan cotton. Features of interest have been lacking, and prices have really been guided by the course of the American markets. Fluctuations have been of fair extent considering the level ruling, but on balance prices are distinctly harder than they were a week ago. Reports from Manchester have shown a slightly better tone, but the actual business has been lacking, both in spot or forward cotton. The near approach of the Christmas holidays has, no doubt, exercised a restraining influence on would-be purchasers. As usual at this season of the year, hope with regard to an improvement in trade early in the New Year is running high. Unfortunately, there would appear to be little ground for such optimism in the general situation at the moment.

A large proportion of the local inquiry has been concerned with Uppers at from 8.75d. to 9½d., while a searching inquiry has been noticed in certain quarters for 7½d. cotton for shipment. Best Uppers have met with only a poor offtake. Sakel at about 14.75d. has met with some interest, but chiefly the inquiry has been for cotton about pass price January, or else inferior qualities at from 8½d. to 10½d.

The recent decision of the Egyptian Government to intervene and support futures values has met with a good deal of adverse comment on this side, and we fear that the move will do little to revive that popularity for Egyptian cotton which is so badly needed. White Sudan at from 100 to 150 on has continued in request, but the amount of business resulting has been of very moderate dimensions. Pilion has been in rather better demand at from 9½d. to 12.00d.

Forwardings to spinners for the week ending 17th were returned as 10,567 bales Egyptians and 1,423 bales Sudan. Estimated sales, 900 Egyptians and 450 Sudan. Quotations of Sakel have been raised 35 points and those of Upper 20 to 30 points. F.G.F. Sakel to-day, 13.75d. F.G.F. Upper to-day, 9.50d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended December 16 state:—

Since our last report the futures market has been very nervous and fluctuating; at the close to-day, however, prices mark a rise of about a dollar as a result of the *communiqué* issued by the Ministry of Finance to the effect that the Government had decided to intervene in the futures market. The week's summary of price movements is as follows:—Sakellaridis: January, 24.93 dollars, 0.93 dollars up; March, 24.77 dollars, 0.84 dollars up; May, 24.70 dollars, 0.62 dollars up; July, 24.80 dollars, 0.67 dollars up; November, 25.10 dollars, 0.40 dollars up. Ashmouni: December, 16.17 dollars, 0.59 dollars up; February, 16.45 dollars, 0.53 dollars up; April, 16.72 dollars, 0.55 dollars up; June, 16.92 dollars, 0.55 dollars up; October, 17.13 dollars, 0.28 dollars up.

Sakel.—During the early part of the week the market was very unsettled on the uncertainty as to the decision which would be taken by the Government on the subject of active intervention in the cotton market. Sometimes rumour had it that the Government was in favour of intervention, and sometimes rumour was to the contrary. Prices went up and down according to the rumour then current, and legitimate business became impossible so that the market was left more or less in the hands of the professionals. As was to be expected, the unsettled state of the market still further restricted business with consuming centres, and the week has been a poor one for both spot and commercial futures operations. The following *communiqué* was posted up in the Bourse this morning before the opening: "Parliament has decided on Government intervention in the futures market and any cotton bought will be taken up. As and when and at what price this intervention will take place will be left to a committee to be formed of members of Parliament and representatives of the Government." On the publication of this *communiqué*, some speculative buying orders were given and prices opened about a dollar up. This morning's session was rather quiet but the advance was maintained.

We do not doubt that if the Government tries to lift prices to levels out of line with the prices of competing

Digitized by Google

growths, we shall see spinners' takings of Sakel more and more reduced, and the spinners being forced to turn to other growths may get accustomed to the change, and thus intervention may, in the long run, prove rather detrimental to the prosperity of the country.

Uppers.—The same remarks as applied to the Sakel market refer equally to the Uppers market, prices rising and falling according to the rumour current. Spinners' demand has fallen off considerably even for this growth. At the second December tender 7,250 kantars dockets were issued, bringing the December total up to 34,500 kantars. The week's receipts amount to 239,092 kantars, against exports 248,158 kantars; the stock in Alexandria is 2,840,168 kantars.

The official figures of arrivals and exports for the period September 1 to December 9 are as follows:—Arrivals: Lower Egypt, 2,195,000 kantars: Upper Egypt, 1,590,000 kantars; total, 3,785,000 kantars. Exports: Sakel, 865,437 kantars; Ashmouni, 1,151,527 kantars; various, 128,722; total, 2,145,686 kantars.

Spot: During the past week we have had much poorer markets at Minet el Bassal and demand from abroad has fallen away still further. Sales amount to about 17,600 bales, of which we estimate 6,900 bales Sakellaridis, 10,000 bales Ashmouni and Zagora, 400 bales Pilion, 50 bales Brown, and 250 bales White. Arrivals are much less than last week. The stock is about at the same large figure but recent Government announcements on the question of intervention in the cotton market have given holders very large ideas of the value of their cotton. As a consequence, offerings are greatly reduced and it is very difficult to buy any weight of decent cotton, especially Sakellaridis, at a commercial price.

Sakellaridis: Demand has been on a greatly reduced scale. All styles have changed hands but the best grades have not been in much favour. Spot differences are without much change except for the grades below Good Fair, which are dearer. Very little cotton of good staple and character is at present on offer.

Ashmouni and Zagora: A fairly good business has been done in all grades. Spot differences are generally inclined to harden.

Pilion: Has been in fair request. Spot differences have hardened a little.

Brown: A small business has been done at slightly harder differences.

Up-Country: The scheme of Government loans to growers has been more in favour this week and the total advances up to the 14th inst. amount to £E1,036,488, against 324,623 kantars. The commercial centres up-country do not show any great activity and a feeling of depression is apparent, due to the lack of business.
